

As filed with the U.S. Securities and Exchange Commission on April 13, 2022

Registration No. 333-260126

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

POST-EFFECTIVE AMENDMENT NO. 1 TO
FORM S-1
REGISTRATION STATEMENT
UNDER
THE SECURITIES ACT OF 1933

TMC the metals company Inc.

(Exact name of registrant as specified in its charter)

British Columbia, Canada (State or other jurisdiction of incorporation or organization)	1000 (Primary Standard Industrial Classification Code Number) 595 Howe Street, 10th Floor Vancouver, British Columbia V6C 2T5 Telephone: (574) 252-9333	Not Applicable (I.R.S. Employer Identification Number)
---------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------

(Address, including zip code, and telephone number, including area code, of registrant's principal executive offices)

Cogency Global Inc.
850 New Burton Road, Suite 201
Dover, Delaware 19904
Telephone: (800) 483-1140

(Name, address, including zip code, and telephone number, including area code, of agent for service)

Copies to:

Michael L. Fantozzi, Esq.
Daniel T. Kajunski, Esq.
Mintz, Levin, Cohn, Ferris,
Glovsky and Popeo, P.C.
One Financial Center
Boston, Massachusetts 02111
Telephone: (617) 542-6000

Approximate date of commencement of proposed sale to the public: **As soon as practicable after the effective date of this registration statement.**

If any of the securities being registered on this Form are to be offered on a delayed or continuous basis pursuant to Rule 415 under the Securities Act of 1933 check the following box.

If this Form is filed to register additional securities for an offering pursuant to Rule 462(b) under the Securities Act, please check the following box and list the Securities Act registration statement number of the earlier effective registration statement for the same offering.

If this Form is a post-effective amendment filed pursuant to Rule 462(c) under the Securities Act, check the following box and list the Securities Act registration statement number of the earlier effective registration statement for the same offering.

If this Form is a post-effective amendment filed pursuant to Rule 462(d) under the Securities Act, check the following box and list the Securities Act registration statement number of the earlier effective registration statement for the same offering.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, a smaller reporting company or an emerging growth company. See the definitions of "large accelerated filer," "accelerated filer," "smaller reporting company" and "emerging growth company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer	<input type="checkbox"/>	Accelerated filer	<input type="checkbox"/>
Non-accelerated filer	<input checked="" type="checkbox"/>	Smaller reporting company	<input checked="" type="checkbox"/>
		Emerging growth company	<input checked="" type="checkbox"/>

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 7(a)(2)(B) of the Securities Act.

The Registrant hereby amends this Registration Statement on such date or dates as may be necessary to delay its effective date until the Registrant shall file a further amendment which specifically states that this Registration Statement shall thereafter become effective in accordance with Section 8(a) of the Securities Act of 1933, as amended, or until the Registration Statement shall become effective on such date as the Securities and Exchange Commission, acting pursuant to said Section 8(a), may determine.

EXPLANATORY NOTE

On October 7, 2021, the registrant filed a registration statement on Form S-1 (File No. 333-260126) (the “Registration Statement”). The Registration Statement was declared effective by the Securities and Exchange Commission on October 22, 2021. This post-effective amendment No. 1 to the Registration Statement is being filed to include information from the registrant’s Annual Report on Form 10-K for the year ended December 31, 2021 and update certain other business information in the Registration Statement. No additional securities are being registered under this post-effective amendment and all applicable registration and filing fees were paid at the time of the original filing of the Registration Statement.

The information in this preliminary prospectus is not complete and may be changed. Neither we nor the selling securityholders may sell these securities until the registration statement filed with the Securities and Exchange Commission becomes effective. This preliminary prospectus is not an offer to sell these securities and it is not soliciting an offer to buy these securities in any state or other jurisdiction where the offer or sale is not permitted.

SUBJECT TO COMPLETION, DATED APRIL 13, 2022

PRELIMINARY PROSPECTUS

TMC THE METALS COMPANY INC.

Up to 264,438,297 Common Shares

Up to 9,500,000 Warrants

This prospectus relates to the issuance by us of up to an aggregate of 24,500,000 of our common shares, without par value (“Common Shares”), which consists of (i) up to 9,500,000 of Common Shares that are issuable upon the exercise of private placement warrants (the “Private Placement Warrants”) originally issued in a private placement in connection with the initial public offering of our predecessor company, Sustainable Opportunities Acquisition Corp. (“SOAC”), at an exercise price of \$11.50 per Common Share, and (ii) up to 15,000,000 Common Shares that are issuable upon the exercise of 15,000,000 warrants issued in connection with the initial public offering of SOAC (the “Public Warrants,” and together with the Private Placement Warrants, the “Warrants”).

This prospectus also relates to the resale from time to time by the Selling Securityholders named in this prospectus (the “Selling Securityholders”) of up to (i) 9,500,000 Private Placement Warrants, (ii) 9,500,000 Common Shares that may be issued upon exercise of the Private Placement Warrants, (iii) 11,578,620 Common Shares that may be issued upon exercise of the Allseas Warrant (as defined below), (iv) 6,759,000 Common Shares held by SOAC’s former directors, transferees of SOAC’s sponsor, Sustainable Opportunities Holdings LLC (the “Sponsor”), and certain of their transferees (collectively, the “Founder Shares”), (v) 11,030,000 Common Shares issued in the PIPE Financing (as defined below), (vi) 131,178,480 Common Shares issued to certain shareholders of DeepGreen (as defined below) pursuant to the Business Combination Agreement (as defined below), (vi) 77,277,244 Common Shares issuable to certain shareholders of DeepGreen upon the conversion of DeepGreen Earnout Shares (as defined below) pursuant to the Business Combination Agreement, (vii) 1,241,000 Common Shares issuable to the transferees of the Sponsor and their transferees upon the conversion of Sponsor Earnout Shares (as defined below) and (viii) 873,953 Common Shares issued to certain service providers to DeepGreen.

This prospectus provides you with a general description of such securities and the general manner in which we and the Selling Securityholders may offer or sell the securities. More specific terms of any securities that we and the Selling Securityholders may offer or sell may be provided in a prospectus supplement that describes, among other things, the specific amounts and prices of the securities being offered and the terms of the offering. The prospectus supplement may also add, update or change information contained in this prospectus.

We will not receive any proceeds from the sale of Common Shares or Private Placement Warrants by the Selling Securityholders or of Common Shares by us pursuant to this prospectus, except with respect to amounts received by us upon exercise of the Warrants.

However, we will pay the expenses, other than any underwriting discounts and commissions, associated with the sale of securities pursuant to this prospectus.

We are registering certain of the securities for resale pursuant to the Selling Securityholders’ registration rights under certain agreements between us and the Selling Securityholders. Our registration of the securities covered by this prospectus does not mean that either we or the Selling Securityholders will issue, offer or sell, as applicable, any of the securities. The Selling Securityholders may offer and sell the securities covered by this prospectus in a number of different ways and at varying prices. We provide more information about how the Selling Securityholders may sell the shares or Warrants in the section entitled “Plan of Distribution.”

[Table of Contents](#)

You should read this prospectus and any prospectus supplement or amendment carefully before you invest in our securities.

Our Common Shares and Public Warrants are listed on Nasdaq under the symbols “TMC” and “TMCWW,” respectively. On April 12, 2022, the closing price of our Common Shares was \$2.00 and the closing price for our Public Warrants was \$0.41.

Investing in our securities involves a high degree of risk. See “Risk Factors” beginning on page 13 of this prospectus and in the other documents that are incorporated by reference in this prospectus.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of these securities or determined if this prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

The date of this prospectus is _____, 2022.

You should rely only on the information contained in this prospectus. No one has been authorized to provide you with information that is different from that contained in this prospectus. This prospectus is dated as of the date set forth on the cover hereof. You should not assume that the information contained in this prospectus is accurate as of any date other than that date.

For investors outside the United States: We have not done anything that would permit this offering or possession or distribution of this prospectus in any jurisdiction where action for that purpose is required, other than in the United States. You are required to inform yourselves about and to observe any restrictions relating to this offering and the distribution of this prospectus.

CERTAIN DEFINED TERMS

In this document:

“*Allseas*” means Allseas Group S.A.

“*Allseas Warrant*” means the warrant held by Allseas to purchase up to 11,578,620 Common Shares, which shall vest upon certain milestones into such number of Common Shares that is based on the formula described therein, and which was assumed by TMC upon the consummation of the Business Combination, in accordance with its terms.

“*Arrangement*” means the arrangement under Part 9, Division 5 of the BCBCA on the terms and subject to the conditions set forth in the Plan of Arrangement.

“*BCBCA*” means the *Business Corporations Act* (British Columbia).

“*Business Combination*” means the transactions contemplated by the Business Combination Agreement which were consummated on September 9, 2021, including the migration and continuance of SOAC from the Cayman Islands to British Columbia, Canada and the acquisition by SOAC of all of the issued and outstanding common shares in the capital of DeepGreen in exchange for Common Shares and Special Shares, whereby DeepGreen became a wholly-owned subsidiary of the Company; and DeepGreen and NewCo Sub amalgamated to continue as one unlimited liability company existing under the laws of British Columbia, Canada, pursuant to a court-approved plan of arrangement under the BCBCA.

“*Business Combination Agreement*” means that Business Combination Agreement, dated as of March 4, 2021, by and among SOAC, NewCo Sub and DeepGreen.

“*Closing*” means the closing of the Business Combination.

“*Closing Date*” means the closing date of the Business Combination, which occurred on September 9, 2021.

“*Code*” means the Internal Revenue Code of 1986, as amended.

“*Common Shares*” means the Common Shares, without par value, of TMC.

“*DeepGreen*” means DeepGreen Metals Inc., a company existing under the laws of British Columbia, Canada, prior to the consummation of the Arrangement and the Business Combination.

“*DeepGreen capital stock*” means the shares of DeepGreen capital stock outstanding prior to the Business Combination.

“*DeepGreen Earnout Shares*” means the (a) 4,999,973 Class A Special Shares, (b) 9,999,853 Class B Special Shares, (c) 9,999,853 Class C Special Shares, (d) 19,999,855 Class D Special Shares, (e) 19,999,855 Class E Special Shares, (f) 19,999,855 Class F Special Shares, (g) 24,999,860 Class G Special Shares, and (h) 24,999,860 Class H Special Shares, in each case in the capital of TMC, each of which is automatically convertible into Common Shares on a one for one basis (unless adjusted as described herein) if certain price per Common Share thresholds are met as described in “Description of Securities — Special Shares.”

“*DeepGreen Option*” means each option to purchase common shares of DeepGreen granted to a DeepGreen employee, director, or consultant.

“*DeepGreen shareholder*” means each holder of DeepGreen capital stock as of any determination time prior to the Effective Time.

“*Effective Time*” means, with respect to the Business Combination, the time on the Closing Date that the Arrangement became effective.

“*Exchange Act*” means the Securities Exchange Act of 1934, as amended.

[Table of Contents](#)

“*FASB*” means the Financial Accounting Standards Board.

“*Founder Shares*” means the aggregate of 6,759,000 Common Shares held by transferees of the Sponsor, Rick Gaenzle, Isaac Barchas and Justin Kelly and their respective transferees.

“*Initial Shareholders*” means the Sponsor and SOAC’s independent directors.

“*Investment Company Act*” means the Investment Company Act of 1940, as amended.

“*Initial public offering*” means SOAC’s initial public offering, consummated on May 8, 2020, through the sale of an aggregate of 30,000,000 units at \$10.00 per unit.

“*JOBS Act*” means the Jumpstart Our Business Startups Act of 2012.

“*NewCo Sub*” means 1291924 B.C. Unlimited Liability Company, an unlimited liability company existing under the laws of British Columbia, Canada and a wholly owned subsidiary of SOAC.

“*Nasdaq*” means The Nasdaq Stock Market.

“*NORI-D*” means the commercialization project of the estimated resources located in NORI Area D.

“*Notice and Articles*” means the notice of articles and articles of TMC.

“*PIPE Financing*” means the issuance of an aggregate of 11,030,000 shares of Common Shares pursuant to the Subscription Agreements to the PIPE Investors immediately prior to the Closing, at a purchase price of \$10.00 per share.

“*PIPE Investors*” means the certain institutional and accredited investors who are party to the Subscription Agreements.

“*PIPE Investor Subscription Agreements*” means the subscription agreements, each dated as of March 4, 2021, by and between TMC and the PIPE Investors, pursuant to which TMC issued an aggregate of 11,030,000 Common Shares to the PIPE Investors immediately prior to the Closing at a purchase price of \$10.00 per share.

“*Private Placement Warrants*” means the 9,500,000 warrants issued to the Sponsor concurrently with SOAC’s initial public offering, each of which is exercisable for one Common Share, now held by transferees of the Sponsor.

“*Public shares*” means SOAC Common Shares included in the units issued in SOAC’s initial public offering.

“*Public shareholders*” means holders of public shares.

“*Public Warrants*” means the warrants included in the units issued in SOAC’s initial public offering, each of which is exercisable for one Common Share, in accordance with its terms.

“*SOAC*” means Sustainable Opportunities Acquisition Corp., a Cayman Islands exempted company limited by shares (which, after the Closing is known as TMC the metals company Inc.).

“*SOAC Ordinary Shares*” means the Class A ordinary shares of SOAC, which were redesignated as Common Shares as a result and upon the consummation of the Continuance.

“*SOAC Class B ordinary shares*” means the shares of Class B ordinary shares of SOAC.

“*TMC*” means TMC the metals company Inc., a British Columbia, Canada corporation (which, prior to consummation of the Business Combination, was known as Sustainable Opportunities Acquisition Corp. (“SOAC” herein)) and, where applicable, its direct and indirect wholly-owned subsidiaries.

[Table of Contents](#)

“*TMC Incentive Equity Plan*” means the TMC the metals company Inc. 2021 Incentive Equity Plan.

“*Registration Rights Agreement*” means the amended and restated registration rights agreement entered into as of the Closing by and among TMC, the Sponsor, certain affiliates of the Sponsor, and certain securityholders of Legacy DeepGreen.

“*Sarbanes-Oxley Act*” means the Sarbanes-Oxley Act of 2002.

“*SEC*” means the United States Securities and Exchange Commission.

“*Securities Act*” means the Securities Act of 1933, as amended.

“*Special Shares*” means the DeepGreen Earnout Shares and the Sponsor Earnout Shares.

“*Sponsor*” means Sustainable Opportunities Holdings LLC, a Delaware limited liability company.

“*Sponsor Earnout Shares*” means the 500,000 Class I Special Shares and 741,000 Class J Special Shares in the capital of TMC, each of which is automatically convertible into Common Shares on a one for one basis (unless adjusted as described herein) if certain Common Share price thresholds are met as described in “Description of Securities — Special Shares.”

“*Transfer Agent*” means Continental Stock Transfer & Trust Company.

“*Trust Account*” means the trust account of SOAC that held the proceeds from SOAC’s initial public offering and the private placement of the Private Placement Warrants.

“*U.S. GAAP*” means United States generally accepted accounting principles.

“*Units*” means the units of SOAC, each consisting of one share of SOAC ordinary shares and one-half (1/2) of one Public Warrant of SOAC.

CAUTIONARY NOTE REGARDING FORWARD-LOOKING STATEMENTS

This prospectus includes forward-looking statements that relate to future events, our future operations or financial performance, or our plans, strategies and prospects. These statements are based on the beliefs and assumptions of our management team. Although we believe that our plans, intentions and expectations reflected in or suggested by these forward-looking statements are reasonable, we cannot assure you that we will achieve or realize these plans, intentions or expectations. Forward-looking statements are inherently subject to risks, uncertainties and assumptions. Generally, statements that are not historical facts, including statements concerning possible or assumed future actions, business strategies, events or performance, are forward-looking statements. These statements may be preceded by, followed by or include the words “believes”, “estimates”, “expects”, “projects”, “forecasts”, “may”, “will”, “should”, “seeks”, “plans”, “scheduled”, “anticipates” or “intends” or the negative of these terms, or other comparable terminology intended to identify statements about the future, although not all forward-looking statements contain these identifying words. The forward-looking statements are based on projections prepared by, and are the responsibility of, our management. Forward-looking statements contained in this prospectus include, but are not limited to, statements about:

- the commercial and technical feasibility of seafloor polymetallic nodule collection and processing;
- our and our partners’ development and operational plans, including with respect to the planned uses of polymetallic nodules, where and how nodules will be obtained and processed, the expected environmental, social and governance impacts thereof and our plans to assess these impacts and the timing and scope of these plans;
- the supply and demand for battery metals and battery cathode feedstocks, copper cathode and manganese ores;
- the future prices of battery metals and battery cathode feedstocks, copper cathode and manganese ores;
- the timing and content of International Seabed Authority’s (“ISA”) final exploitation regulations that will create the legal and technical framework for exploitation of polymetallic nodules in the Clarion Clipperton Zone of the Pacific Ocean (“CCZ”);
- government regulation of mineral extraction from the deep seafloor and changes in mining laws and regulations;
- technical, operational, environmental, social and governance risks of developing and deploying equipment to collect polymetallic nodules at sea and to process such nodules on land;
- the sources and timing of potential revenue as well as the timing and amount of estimated future production, costs of production, other expenses, capital expenditures and requirements for additional capital;
- cash flow provided by operating activities;
- the expected activities of our partners under our key strategic relationships;
- the sufficiency of our cash on hand to meet our working capital and capital expenditure requirements;
- our ability to raise financing in the future;
- any litigation to which we are a party;
- claims and limitations on insurance coverage;
- our plans to mitigate our material weaknesses in our internal control over financial reporting;
- the restatement of our financial statements;
- geological, metallurgical and geotechnical studies and opinions;
- mineral resource estimates;
- our status as an emerging growth company, non-reporting Canadian issuer and passive foreign investment company;
- infrastructure risks;
- dependence on key management personnel and executive officers;
- political and market conditions beyond our control;
- COVID-19 and the impact of the COVID-19 pandemic on our business;
- our financial performance; and
- other factors detailed under the section titled “*Risk Factors.*”

These forward-looking statements are based on information available as of the date of this prospectus, and current expectations, forecasts and assumptions, and involve a number of judgments, risks and uncertainties. Important factors could cause actual results to differ materially from those indicated or implied by forward-looking statements such as those contained in documents we have filed with the SEC. Accordingly, forward-looking statements should not be relied upon as representing our views as of any subsequent date, and we do not undertake any obligation to update forward-looking statements to reflect events or circumstances after the date they were made, whether as a result of new information, future events or otherwise, except as may be required under applicable securities laws.

As a result of a number of known and unknown risks and uncertainties, our actual results or performance may be materially different from those expressed or implied by these forward-looking statements. For a discussion of the risks involved in our business and investing in our Common Shares, see the section entitled “*Risk Factors*.”

Should one or more of these risks or uncertainties materialize, or should any of the underlying assumptions prove incorrect, actual results may vary in material respects from those expressed or implied by these forward-looking statements. You should not place undue reliance on these forward-looking statements.

SUMMARY OF THE PROSPECTUS

This summary highlights selected information included in this prospectus and does not contain all of the information that may be important to you in making an investment decision. This summary is qualified in its entirety by the more detailed information included in this prospectus. Before making your investment decision with respect to our securities, you should carefully read this entire prospectus, including the information under “Risk Factors,” “Management’s Discussion and Analysis of Financial Condition and Results of Operations” and the financial statements included elsewhere in this prospectus.

The Company

We are a deep-sea minerals exploration company focused on the collection, processing and refining of polymetallic nodules found on the seafloor in international waters of the Clarion Clipperton Zone (“CCZ”), about 1,300 nautical miles south-west of San Diego, California. The CCZ is a geological submarine fracture zone of abyssal plains and other formations in the Eastern Pacific Ocean, with a length of around 7,240 km (4,500 miles) that spans approximately 4,500,000 square kilometers (1,700,000 sq mi). Polymetallic nodules are discrete rocks that sit unattached to the seafloor, occur in significant quantities in the CCZ and have high concentrations of nickel, manganese, cobalt and copper in a single rock.

These four metals contained in the polymetallic nodules are critical for the transition to clean energy. Our resource definition work to date shows that nodules in our contract areas represent the world’s largest estimated undeveloped source of critical battery metals. If we are able to collect polymetallic nodules from the seafloor on a commercial scale, we plan to use such nodules to produce three types of metal products: (i) feedstock for battery cathode precursors (nickel and cobalt sulfates) for electric vehicles (“EV”) and renewable energy storage markets, (ii) copper cathode for EV wiring, clean energy transmission and other applications, and (iii) manganese silicate for manganese alloy production required for steel production. Our mission is to build a carefully managed, shared stock of metal that can be used, recovered and reused for generations to come. Significant quantities of newly mined metal are required because existing metal stocks are insufficient to meet rapidly rising demand.

Exploration and exploitation of seabed minerals in international waters is regulated by the International Seabed Authority (“ISA”), an intergovernmental organization established pursuant to the 1994 Agreement Relating to the Implementation of the United Nations Convention on the Law of the Sea (“UNCLOS”). The ISA grants contracts to sovereign states or to private contractors who are sponsored by a sovereign state. The ISA requires that a contractor must obtain and maintain sponsorship by a host nation that is a member of the ISA and signatory to UNCLOS and such nation must maintain effective supervision and regulatory control over such sponsored contractor. The ISA has issued a total of 19 polymetallic nodule exploration contracts covering approximately 1.28 million km², or 0.4% of the global seafloor, 17 of which are in the CCZ. We hold exclusive exploration and commercial rights to three of the 17 polymetallic nodule contract areas in the CCZ through our subsidiaries Nauru Ocean Resources Inc. (“NORI”) and Tonga Offshore Mining Limited (“TOML”), sponsored by the Republic of Nauru (“Nauru”) and the Kingdom of Tonga (“Tonga”), respectively, and exclusive commercial rights through our subsidiary, DeepGreen Engineering Pte. Ltd.’s (“DGE”), arrangement with Marawa Research and Exploration Limited (“Marawa”), a company owned and sponsored by the Republic of Kiribati (“Kiribati”).

We are still in the exploration phase and have not yet obtained any exploitation contracts from the ISA to commence commercial scale polymetallic nodule collection in the CCZ nor have we obtained the applicable environmental permits and other permits required to build and operate commercial scale polymetallic nodule processing and refining plants on land.

Background and Business Combination

The Company was originally known as Sustainable Opportunities Acquisition Corp. (“SOAC”). On September 9, 2021 (the “Closing Date”), we consummated a business combination (the “Business Combination”) pursuant to the terms of the business combination agreement dated as of March 4, 2021 (the “Business Combination Agreement”) by and among SOAC, 1291924 B.C. Unlimited Liability Company, an unlimited liability company existing under the laws of British Columbia, Canada (“NewCo Sub”), and DeepGreen Metals Inc., a company existing under the laws of British Columbia, Canada (“Legacy DeepGreen”). In connection with the Business Combination, SOAC changed its name to “TMC the metals company Inc.” (“TMC”).

[Table of Contents](#)

Prior to the Effective Time (as defined below), SOAC migrated and was continued from the Cayman Islands to British Columbia, Canada and was domesticated as a company existing under the laws of British Columbia, pursuant to Part XII of the Cayman Islands Companies Act (as Revised) and Part 9, Division 8 of the Business Corporations Act (British Columbia) (the “BCBCA”) (such continuance, the “Continuance”). As a result and upon the consummation of the Continuance, (i) the identifying name of the Class A ordinary shares of SOAC, par value \$0.0001 per share (the “Class A ordinary shares”), and Class B ordinary shares of SOAC, par value \$0.0001 per share (the “Class B ordinary shares”), were changed to common shares of the Company (the “Common Shares”) and the Class A ordinary shares and Class B ordinary shares were changed from shares with par value to shares without par value; (ii) the rights and restrictions attached to the renamed Class A ordinary shares and Class B ordinary shares of SOAC were deleted and the shares have the rights and restrictions attached to the Common Shares, as described in the notice of articles and articles of the Company; (iii) the number of authorized Common Shares were unlimited; (iv) each issued and outstanding whole warrant to purchase one Class A ordinary share automatically represented the right to purchase one Common Share at an exercise price of \$11.50 per share on the terms and conditions set forth in the SOAC warrant agreement; (v) the notice of articles and articles of TMC became the governing documents of the Company; and (vi) SOAC’s name changed to “TMC the metals company Inc.”.

On the Closing Date, promptly following the Continuance, pursuant to a court-approved plan of arrangement (the “Plan of Arrangement,” and the arrangement pursuant to such Plan of Arrangement, the “Arrangement”) under the BCBCA, (i) SOAC acquired all of the issued and outstanding common shares in the capital of DeepGreen (the “DeepGreen Common Shares”); (ii) the shareholders and the optionholders of DeepGreen became entitled to receive at the Effective Time, in exchange for their DeepGreen Common Shares and options to purchase DeepGreen Common Shares, as applicable, an aggregate of (a) 229,162,651 Common Shares (which includes Common Shares underlying options) based on an Adjusted Equity Value (as defined in the Business Combination Agreement) immediately prior to the Effective Time of \$2,291,628,539, (b) 4,999,973 Class A Special Shares (which includes Class A Special Shares underlying options), (c) 9,999,853 Class B Special Shares (which includes Class B Special Shares underlying options), (d) 9,999,853 Class C Special Shares (which includes Class C Special Shares underlying options), (e) 19,999,855 Class D Special Shares (which includes Class D Special Shares underlying options), (f) 19,999,855 Class E Special Shares (which includes Class E Special Shares underlying options), (g) 19,999,855 Class F Special Shares (which includes Class F Special Shares underlying options), (h) 24,999,860 Class G Special Shares (which includes Class G Special Shares underlying options), and (i) 24,999,860 Class H Special Shares (which includes Class H Special Shares underlying options), in each case, in the capital of the Company, each of which Special Share is automatically convertible into Common Shares on a one-for-one basis (unless adjusted as described herein) if certain Common Share price thresholds are met as described herein (collectively, the “DeepGreen Earnout Shares”); (iii) DeepGreen became a wholly-owned subsidiary of the Company; and (iv) DeepGreen and NewCo Sub amalgamated to continue as one unlimited liability company existing under the laws of British Columbia, Canada. In addition, we assumed the Allseas Warrant which became a warrant to purchase our Common Shares upon the consummation of the Business Combination, in accordance with its terms. As a consequence of the Business Combination, each option to purchase DeepGreen Common Shares, whether vested or unvested, that was outstanding immediately prior to the Effective Time was assumed by the Company and became an option (vested or unvested, as applicable) to purchase a number of Common Shares equal to the number of DeepGreen Common Shares subject to such option immediately prior to the Effective Time multiplied by the Per Share Consideration (as defined in the Business Combination Agreement), rounded down to the nearest whole number of shares, at an exercise price per share equal to the exercise price per share of such option immediately prior to the Effective Time divided by the Per Share Consideration, rounded up to the nearest whole cent. The time that the Arrangement became effective is referred to as the “Effective Time.”

Immediately following the Continuance and prior to the Effective Time, Sustainable Opportunities Holdings LLC, a Delaware limited liability company (the “Sponsor”), exchanged 741,000 Common Shares (which consisted of the SOAC Class B ordinary shares prior to the Continuance) for 500,000 Class I Special Shares (the “Class I Special Shares”) and 741,000 Class J Special Shares, each of which is automatically convertible into Common Shares on a one-for-one basis if certain Common Share price thresholds are met as described herein (the “Class J Special Shares” and, together with the Class I Special Shares, the “Sponsor Earnout Shares” and, collectively with the DeepGreen Earnout Shares, the “Special Shares”).

In connection with the foregoing and concurrently with the execution of the Business Combination Agreement, SOAC entered into Subscription Agreements (the “Subscription Agreements”) with certain investors (the “PIPE Investors”), pursuant to which the PIPE Investors agreed to purchase an aggregate of 11,030,000 Common Shares at a purchase price of \$10.00 per share, for aggregate gross proceeds of \$110,300,000 (the “PIPE Financing”). The PIPE Financing closed concurrently with the Business Combination. SOAC also entered into Subscription Agreements for an aggregate of 22,000,000 Common Shares, for a purchase price of \$10.00 per share and an aggregate purchase price of \$220,000,000 with two investors who defaulted on the Closing Date under the Subscription Agreements. The Company is aggressively pursuing its available remedies with respect to both investors.

[Table of Contents](#)

The total number of Common Shares outstanding immediately following the Closing was approximately 224,385,324 comprising (i) 203,874,981 Common Shares issued to DeepGreen shareholders, (ii) 11,030,000 Common Shares issued in connection with the Closing to the PIPE Investors pursuant to the PIPE Financing, (iii) 6,759,000 Common Shares held by the initial shareholders (which included the Sponsor, Rick Gaenzle, Isaac Barchas and Justin Kelly, the “initial shareholders”) and (iv) 2,721,343 Common Shares held by public shareholders, reflecting redemptions of 27,278,657 Class A ordinary shares.

Stock Exchange Listing

Common Shares and Public Warrants are listed for trading on Nasdaq under the symbols “TMC” and “TMCWW”, respectively.

Summary of Risk Factors

Investing in our securities involves risks. You should carefully consider the risks described in “*Risk Factors*” beginning on page 13 before making a decision to invest in our Common Shares. If any of these risks actually occurs, our business, financial condition and results of operations would likely be materially adversely affected. Some of the risks related our business and industry are summarized below.

References in the summary below to “we”, “us”, “our” and “the Company” refer to TMC and its subsidiaries.

- Our business is subject to numerous regulatory uncertainties which, if not resolved in our favor, would have a material adverse impact on our business.
- Our resource development activities are subject to changes in government regulation and political instability.
- Changes to any of the laws, rules, regulations or policies to which we are subject could have a significant impact on our business.
- Our exploration, collecting, processing and refining activities are subject to extensive and costly environmental requirements, and current and future laws, regulations, and permits may impose significant costs, liabilities, or obligations, or could limit or prevent our ability to continue our operations as currently contemplated or to undertake new operations.
- We may become subject to environmental liabilities as a result of noncompliance or newly imposed regulations.
- The grade and quality of the polymetallic nodule deposits that we intend to develop are estimates, and there are no guarantees that such deposits will be suitable for collecting or commercialization.
- No seafloor polymetallic nodule deposit has ever been commercially collected, and our offshore collection technology and development plans and processes may not be sufficient to accomplish our objectives.
- Mineral resource estimates from the contract areas of NORI and TOML are only estimates.
- Our business is subject to significant risks, and we may never develop minerals in sufficient grade or quantities to justify commercial operations.
- Uncertainty in our estimates of polymetallic nodule deposits could result in lower-than-expected revenues and higher costs.
- We operate in a highly competitive industry, and there are no assurances that our efforts will be successful.
- The prevailing market prices of nickel, manganese, copper, cobalt, and other commodities will have a material impact on our ability to achieve commercial success.
- We may be adversely affected by fluctuations in demand for nickel, manganese, copper, cobalt, and other commodities.

[Table of Contents](#)

- We may experience difficulty in creating market acceptance for a novel manganese product.
- Negative perceptions related to the collection of polymetallic nodules could have a material adverse effect on our business.
- Offshore nodule collection and onshore processing and refining operations pose inherent risks and costs that may negatively impact our business.
- Our business is contingent on our ability to successfully identify, collect and process polymetallic nodules, and in doing so, we will need to rely on certain existing and future strategic relationships, some of which we may be unable to maintain and/or develop.
- Some of the offshore equipment that we will need to accomplish our objectives has not been manufactured and/or tested.
- The polymetallic nodules that we may recover will require specialized treatment and processing, and there is no certainty that such processes will result in a recovery of metals that is consistent with our expectations, or that we will be able to develop or otherwise access processing plants that are suitable for our purposes.
- Our exploration and polymetallic nodule collecting activities may be affected by natural hazards, which could have a material adverse effect on our business.
- Actual capital costs, financing strategies, operating costs, production and economic returns may differ significantly from those we have anticipated and there can be no assurance that any future development activities will result in profitable metal production operations.
- We have a limited operating history, and there can be no assurance that we will be able to commercially develop our resource areas or achieve profitability in the future.
- We depend on key personnel for the success of our business. The loss of key personnel or the hiring of ineffective personnel could negatively impact our operations and profitability.
- We are dependent upon information technology systems, which are subject to cyber threats, disruption, damage and failure.
- Our business is subject to a variety of risks, some of which may not be covered by our future or existing insurance policies.
- We may not be able to adequately protect our intellectual property rights. If we fail to adequately enforce or defend our intellectual property rights, our business may be harmed.
- If we infringe, or are accused of infringing, on the intellectual property rights of third parties, it may increase our costs or prevent us from being able to commercialize new products.
- The COVID-19 pandemic could have an adverse effect on our business.
- We may issue additional common shares or other equity securities without shareholder approval, which would dilute your ownership interests and may depress the market price of our common shares.
- Our outstanding warrants have become exercisable for our common shares beginning on October 9, 2021, which if exercised, will increase the number of shares eligible for future resale in the public market and result in dilution to our shareholders.
- We have identified material weaknesses in our internal control over financial reporting. If we are unable to develop and maintain an effective system of internal control over financial reporting, we may not be able to accurately report our financial results in a timely manner, which may adversely affect investor confidence in us and materially and adversely affect our business and operating results and the value of our common shares.

- We may face litigation and other risks as a result of the material weaknesses in our internal control over financial reporting.
- We are involved in class action litigation that may adversely affect us, and we may not be successful in our litigation related to non-performing Private Investment in Public Equity (“PIPE”) investors.
- Our business is capital intensive, and we may be required to raise additional funds in the future in order to accomplish our objectives.
- We may incur debt in the future, and our ability to satisfy our obligations thereunder remains subject to a variety of factors, many of which are not within our control.
- An active trading market for our common shares and warrants may not be sustained, which would adversely affect the liquidity and price of our securities.
- There can be no assurance that we will be able to comply with the continued listing standards of Nasdaq.
- We are exposed to risks in our international operations, which could adversely affect our business.
- We may be classified as a passive foreign investment company (“PFIC”) in any taxable year, which could result in adverse U.S. federal income tax consequences to U.S. holders.

Corporate Information

SOAC was incorporated on December 18, 2019 as a Cayman Islands exempted company limited by shares and formed for the purpose of effecting a merger, share exchange, asset acquisition, share purchase, reorganization or similar business combination with one or more businesses.

On May 8, 2020, SOAC consummated an initial public offering of 30,000,000 units at an offering price of \$10.00 per unit, and a private placement with Sponsor of 9,500,000 Private Placement Warrants at an offering price of \$1.00 per warrant.

DeepGreen was incorporated under the laws of the Province of British Columbia, Canada in 2011.

On September 9, 2021, SOAC and DeepGreen completed the Business Combination, which included the migration and continuance of SOAC from the Cayman Islands to British Columbia, Canada and the acquisition by SOAC of all of the issued and outstanding common shares in the capital of DeepGreen in exchange for Common Shares and Special Shares, whereby DeepGreen became a wholly-owned subsidiary of the Company; and DeepGreen and NewCo Sub amalgamated to continue as one unlimited liability company existing under the laws of British Columbia, Canada, pursuant to a court-approved plan of arrangement under the BCBCA. As a result, DeepGreen became a wholly owned subsidiary of SOAC, SOAC’s corporate name was changed to TMC the metals company Inc. and the business of DeepGreen became the business of the Company.

TMC’s principal executive offices are located at 595 Howe Street, 10th Floor, Vancouver, British Columbia V6C 2T5, and its telephone number is (574) 252-9333. TMC does not have a physical office in Vancouver, British Columbia, its directors and executive officers work remotely in various countries around the world, and the Vancouver, British Columbia address disclosed as its principal executive office has been provided because it is TMC’s records office required under the BCBCA.

Emerging Growth Company

Section 102(b)(1) of the Jumpstart Our Business Startups Act of 2012 (the “JOBS Act”) exempts emerging growth companies from being required to comply with new or revised financial accounting standards until private companies (that is, those that have not had a registration statement under the Securities Act declared effective or do not have a class of securities registered under the Exchange Act) are required to comply with the new or revised financial accounting standards. The JOBS Act provides that a company can elect to opt out of the extended transition period and comply with the requirements that apply to non-emerging growth companies but any such election to opt out is irrevocable. We have elected not to opt out of such extended transition period which means that when a standard is issued or revised and it has different application dates for public or private companies, we, as an emerging growth company, can adopt the new or revised standard at the time private companies adopt the new or revised standard. This may make comparison of our financial statements with those of another public company that is not an emerging growth company or is an emerging growth company that has opted out of using the extended transition period, difficult or impossible because of the potential differences in accounting standards used.

We will remain an emerging growth company until the earlier of: (1) the last day of the fiscal year (a) following the fifth anniversary of the closing of SOAC’s initial public offering, (b) in which we have total annual gross revenue of at least \$1.07 billion, or (c) in which we are deemed to be a large accelerated filer, which means the market value of our common equity that is held by non-affiliates is \$700 million or more as of the end of that fiscal year’s second fiscal quarter; and (2) the date on which we have issued more than \$1.00 billion in non-convertible debt securities during the prior three-year period. References herein to “emerging growth company” have the meaning associated with it in the JOBS Act.

THE OFFERING

Issuer	TMC the metals company Inc.
Issuance of Common Shares	
Common Shares to be issued upon exercise of all Private Placement Warrants and Public Warrants	24,500,000 shares
Common Shares outstanding prior to exercise of all warrants	226,780,843 shares ⁽¹⁾
Use of proceeds	We will receive up to an aggregate of approximately \$281,750,000 from the exercise of all 24,500,000 Warrants, assuming the exercise in full of such Warrants for cash. Unless we inform you otherwise in a prospectus supplement or free writing prospectus, we intend to use the net proceeds from the exercise of such warrants for general corporate purposes.
Resale of Common Shares and warrants	
Common Shares offered by the Selling Securityholders (representing the Founder Shares, Common Shares that may be issued upon exercise of the Private Placement Warrants, Common Shares issued in the PIPE Financing, Common Shares issued or issuable to certain shareholders of DeepGreen pursuant to the Business Combination Agreement, including Common Shares that may be issued upon the conversion of DeepGreen Earnout Shares, Common Shares issuable upon the conversion of Sponsor Earnout Shares and Common Shares issued to certain service providers to Legacy DeepGreen)	264,438,297 Common Shares
Warrants offered by the Selling Securityholders (representing the Private Placement Warrants)	9,500,000 Private Placement Warrants
Exercise price	\$11.50 per share, subject to adjustment as described herein
Redemption	The Warrants are redeemable in certain circumstances. See “ <i>Description of Securities — Warrants</i> ” for further discussion.
Use of proceeds	We will not receive any proceeds from the sale of the Common Shares and Warrants to be offered by the Selling Securityholders. With respect to Common Shares underlying the Warrants, we will not receive any proceeds from such shares except with respect to amounts received by us upon exercise of such Warrants to the extent such Warrants are exercised for cash.
Lock-up agreements	Certain of our stockholders are subject to certain restrictions on transfer until the termination of applicable lock-up periods. See “ <i>Plan of Distribution — Amended and Restated Registration Rights Agreement</i> ” for further discussion.
Ticker symbols	“TMC” and “TMCWW” for the Common Shares and Public Warrants, respectively.

(1) Represents the number of Common Shares outstanding as of March 22, 2022. The number of issued and outstanding Common Shares does not include the Common Shares reserved for issuance under the TMC Incentive Equity Plan or reserved for issuance upon conversion of the Special Shares.

RISK FACTORS

An investment in our securities involves a high degree of risk. You should carefully consider the risks described below before making an investment decision. Our business, prospects, financial condition, or operating results could be harmed by any of these risks, as well as other risks not known to us or that we consider immaterial as of the date of this prospectus. The trading price of our securities could decline due to any of these risks, and, as a result, you may lose all or part of your investment.

Unless the context otherwise requires, references in this section to “we,” “us,” “our” and the “Company” refer to TMC the metals company Inc. and its subsidiaries following the Business Combination, or to DeepGreen or SOAC prior to the Business Combination, as the case may be.

Regulatory and Environmental Risks.

Our business is subject to numerous regulatory uncertainties which, if not resolved in our favor, would have a material adverse impact on our business.

To date, no commercial collection (also referred to as “mining,” “exploitation” or “harvesting”) of nodules has occurred on the seafloor in the area of the high seas beyond national jurisdiction (the “Area”), which includes the CCZ. Moreover, despite the release by the ISA of the Draft Regulations on Exploitation of Mineral Resources (the “Draft Regulations”), finalization of such regulations remains subject to approval and adoption by the ISA. The ISA was intending to have these regulations finalized by July 2020, but the COVID-19 pandemic disrupted ISA meetings and discussions. Once adopted, these regulations will create the legal and technical framework for exploitation of the polymetallic nodules in the NORI, TOML and Marawa contract areas.

Section 1, paragraph 15 of the 1994 Agreement relating to the Implementation of Part XI of UNCLOS allows a member state whose national intends to apply for approval of a plan of work for exploitation to notify the ISA of such intention. This notice obliges the ISA to complete the adoption of exploitation regulations within two years of the request made by the member state.

On June 25, 2021, Nauru submitted its notice to the ISA requesting that it complete, by July 9, 2023, the adoption of regulations necessary to review NORI’s plans of work for the commercial exploitation of polymetallic nodules. The notice submitted by Nauru to the ISA has increased the likelihood that regulations will be adopted that will govern and enable commercial development of polymetallic nodules by mid-2023. If the ISA has not completed the adoption of such regulations within the prescribed time and an application for approval of a plan of work for exploitation is pending before the ISA, the ISA shall nonetheless consider and provisionally approve such plan of work based on: (i) the provisions of the UNCLOS; (ii) any rules, regulations and procedures that the ISA may have adopted provisionally at the time, (iii) the basis of the norms contained in the UNCLOS and (iv) the principle of non-discrimination among contractors.

We expect the final regulations (“Final Regulations”) to be approved within the next two years, but there can be no assurance that such regulations will be approved then, or at all. The Draft Regulations and several supporting standards and guidelines are at an advanced stage, but there remains uncertainty regarding the final form that these will take, as well as the impact that such regulations, standards and guidelines will have on our ability to meet our objectives.

The collection of polymetallic nodules within the CCZ, where our exploration areas are located, will require approval of an ISA Exploitation Contract (which will authorize commercial collection activities). As part of the application for an ISA Exploitation Contract, all contractors are required to complete baseline studies and an ESIA, culminating in an EIS, prior to collecting nodules. The EIS would be accompanied by an Environmental Management and Monitoring Plan (“EMMP”). The EMMP is expected to specify the objectives and purpose of all monitoring requirements, the components to be monitored, frequency of monitoring, methods of monitoring, analysis required in each monitoring component, monitoring data management and reporting.

In order to move our exploration projects into commercial production, our wholly-owned subsidiaries, NORI and TOML will each need to obtain an ISA Exploitation Contract, as will our partner, Marawa, in addition to related permits that may be required by our commercial partners. There can be no assurance that the ISA will evaluate any Exploitation Contract application by our subsidiaries in a timely manner. Even if the ISA timely evaluates such applications(s), our subsidiaries may be required to submit a supplementary EIS before obtaining approval. As such, there is a risk that an ISA Exploitation Contract may not be granted by the ISA, may not be granted on a timely basis, or may be granted on uneconomic terms.

Similarly, with respect to Sponsoring State regulation, no assurance can be given that new rules and regulations will not be enacted or that existing rules and regulations will not be applied in a manner that would limit or curtail production or development by our subsidiaries. Amendments to current laws and regulations governing the operations and activities of deep-sea mineral resources companies, or changes in interpretation thereto, or the unwillingness of countries throughout the world to enforce such laws and regulations, could have a material adverse impact on our business, and could cause increases in exploration expenses, capital expenditures, production costs, or put the security of our equipment at risk to activism or piracy. Such amendments could also cause reductions in our future production, or the delay or abandonment in the development of our polymetallic mineral resource properties. There can be no certainty that actions by governmental and regulatory authorities, including changes in regulation, taxation and other fiscal regimes, will not adversely impact our projects or our business. Further, our operations depend on the continuation of the Sponsorship Agreements between our subsidiaries NORI and TOML and each of their host Sponsoring nations, Tonga and Nauru, respectively. Each subsidiary has been registered and incorporated within such host nation and each nation has maintained effective supervision, regulation, and sponsorship over the conduct of such subsidiary. While we have beneficial ownership over such subsidiaries, we operate under the regulation and sponsorship of Nauru and Tonga. If such arrangement is challenged, or sponsorship is terminated, we may have to restructure the ownership or operations of such subsidiary to ensure continued state sponsorship. Failure to maintain sponsorship, or secure new state sponsorship, will have a material impact on such subsidiary and on our overall business and operations.

While the rates of payments are yet to be set by the ISA, the 1994 Agreement relating to the Implementation of Part XI of the UNCLOS of 10 December 1982 (the “1994 Implementation Agreement”) prescribes a relevant framework that the rates of payments “shall be within the range of those prevailing in respect of land-based mining of the same or similar minerals in order to avoid giving deep seabed miners an artificial competitive advantage or imposing on them a competitive disadvantage.” The ISA has held workshops with stakeholders to discuss and seek comments on the potential financial regime for the collecting of polymetallic nodules in the CCZ. There can be no assurance that the ISA will put in place Final Regulations in a timely manner or at all. Such regulations may also impose burdensome obligations or restrictions on us, and/or may contain terms that do not enable us to develop our projects.

Our resource development activities are subject to changes in government regulation and political instability.

Parties carrying out exploration and collection operations in the CCZ must be sponsored by a State that is a member of the ISA. The sponsoring States of our subsidiaries NORI and TOML are Nauru and Tonga, respectively. In addition, our subsidiary, DGE, has an exclusive contract with Marawa, which is sponsored by Kiribati, that permits DGE to conduct activities in connection with the exploration contract held by Marawa with the ISA. If any of these country ceases such sponsorship, our subsidiaries or their partners (as applicable) would need to seek sponsorship elsewhere, which could impact our operations as a group.

There is a risk that a State sponsoring activities in a project area ceases to be a sponsor, or is not permitted to be a sponsor, or that NORI and TOML cease to remain as sponsored contractors by such State; and if an agreement cannot be reached with a substitute sponsoring State, or if we are unable to transfer our sponsorship to another State, such subsidiary could be forced to cease activities in the CCZ.

Additionally, there is little jurisprudence or interpretative guidance regarding the application of the sponsorship regulations that are applicable to our business. For example, with respect to the question over the regulation of which State can impact the activities of any contractor (such as NORI or TOML), we have taken the view that incorporation, registration and the grant of nationality are critical factors, amongst others, notwithstanding the beneficial ownership of a subsidiary by its parent (“beneficial ownership”). While this position has not been challenged by our sponsoring States or the ISA, certain organizations that oppose the deep-sea polymetallic nodule exploration and collecting industry have advocated for the use of a beneficial ownership test for state sponsorship, and there are no guarantees that our interpretation will be universally accepted in the future.

The mineral exploration activities of our subsidiaries and their future project development prospects could be affected in varying degrees by political instability and changes in government regulation relating to foreign investment and the deep-sea polymetallic collecting business, including expropriation. Operations may also be affected in varying degrees by possible natural disasters in the region, terrorism, military conflict, crime, piracy, fluctuations in currency rates, and high inflation. In addition, from time to time, governments may nationalize private businesses, including companies such as ours. There can be no assurance that the governments of countries where we or our affiliates or third-party contractors operate or the governments with which our subsidiaries work in the CCZ will not nationalize companies such as ours and our assets in the future, or impose burdensome obligations or restrictions. There can also be no assurance that the ISA will not impose burdensome obligations or restrictions on our business or our projects (or those of our affiliates and third-party contractors), or that they will not implement policies or regulations that would prevent us from accomplishing our objectives.

Changes to any of the laws, rules, regulations or policies to which we are subject could have a significant impact on our business.

Changes to any of the laws, rules, regulations, taxation or other policies to which we are subject could have a significant impact on our business. There can be no assurance that we will be able to comply with any future laws, rules, regulations and policies. Failure to comply with applicable laws, rules, regulations, and policies may subject us to civil or regulatory proceedings, including fines or injunctions, which may have a material adverse effect on our business, financial condition, liquidity, and results of operations. In addition, compliance with any future laws, rules, regulations, and policies could negatively impact our profitability, and could have a material adverse effect on our business, financial condition, liquidity and results of operations.

Furthermore, we may seek to expand our production capabilities in the future, which would require additional regulatory approvals that may not be provided in a timely manner or at all. Furthermore, such additional approvals could require changes to environmental offset areas and related environmental protections which, if overly burdensome, could impact our operations.

Our exploration, collecting, processing and refining activities are subject to extensive and costly environmental requirements, and current and future laws, regulations, and permits may impose significant costs, liabilities, or obligations, or could limit or prevent our ability to continue our operations as currently contemplated or to undertake new operations.

All phases of exploring for and collecting and processing polymetallic nodules will be subject to environmental regulation in various jurisdictions and under national as well as international laws and conventions. No seafloor polymetallic nodule deposit has been developed commercially, and it is not clear what environmental parameters may need to be measured to satisfy regulatory authorities for an ISA Exploitation Contract to be granted. A full ESIA for deep-sea collecting operations has yet to be completed and approved by the ISA, and the full impact of any polymetallic nodule collecting operation on the environment has yet to be determined. Further, the required standards for an ESIA have not been finalized by the ISA, which could require changes to any submissions made by our subsidiaries in connection with an ISA Exploitation Contract application. Environmental legislation is evolving in a manner which is likely to require strict standards and enforcement, increased fines and penalties for non-compliance, more stringent environmental assessments of proposed projects and a heightened degree of responsibility for companies and their officers, directors and employees.

Nodule collection operations in the CCZ are certain to disturb wildlife in the operating area and may impact ecosystem function. The nature and severity of these impacts on CCZ wildlife are expected to vary by species and are currently subject to significant uncertainty. Our studies baselining wildlife and ecosystem function, piloting the nodule collection system and assessing impacts arising from the use of this system are currently in progress and, similar to studies conducted in respect of land-based mining, may not definitively establish the impacts of activities on the biodiversity in the CCZ. Given the significant volume of deep water and the difficulty of sampling and retrieving biological specimens, a complete biological inventory might never be established. Accordingly, impacts on CCZ biodiversity may never be, completely and definitively known. For the same reasons, it may also not be possible to definitively say whether the impact of nodule collection on global biodiversity will be less significant than those estimated for land-based mining for a similar amount of produced metal.

It is also currently not definitively known whether the risk of biodiversity loss in the CCZ could be eliminated through setting aside large representative areas of CCZ under protection (13 areas currently set aside by ISA covering 43% of the CCZ) or reduced through mitigation strategies inside operating areas or how long it will take for disturbed seabed areas to recover naturally. Prior research indicates that the density, diversity and function of fauna representing most of resident biomass (including mobile, pelagic and microbial life) are expected to recover naturally over years to decades. However, a high level of uncertainty exists around recovery of fauna that requires the hard substrate of nodules for critical life function. The extent to which planned measures, such as leaving behind 15% of nodule cover (by mass) and setting aside no-take zones, would aid recruitment and recovery of nodule-dependent species in impacted areas will depend on factors like habitat connectivity, which is an area that is still under study.

While we intend to collect seafloor polymetallic nodules in a way that mitigates and reduces potential damage to the seafloor, marine life and ecosystem function, we do not know whether the ISA or any other regulatory body will seek to impose onerous methods for the restoration of the disturbed area or rehabilitation obligations on our collecting process. Any such obligations, to the extent they are overly burdensome, could result in material changes to our business as currently contemplated.

Although the environmental impact review process has not yet been finalized, all contractors have been made aware of the requirement to complete baseline studies and an ESIA, culminating in an EIS, prior to collecting. The EIS would be accompanied by an EMMP, which will be required as part of the application for an ISA Exploitation Contract within the contract areas of NORI, TOML and Marawa. The EMMP is expected to specify the objectives and purpose of all monitoring requirements, the components to be monitored, frequency of monitoring, methods of monitoring, analysis required in each monitoring component, monitoring data management and reporting.

The EMMP will also be submitted to the ISA for approval as part of the ISA Exploitation Contract application. There are no guarantees that the ISA will evaluate any exploitation contract application by our subsidiaries in a timely manner, and even if the ISA does timely evaluate such applications(s), such subsidiary may be required to submit a supplementary EIS before being approved. This may result in delays that could impact our projected timeframe. Furthermore, in the event that the ISA evaluates and approves an application in a timely manner, any aspect of such application and approval theoretically could be subject to legal challenges which could result in further delays that could detrimentally impact our business. For example, certain conservation groups have called for a ten-year moratorium on all deep-sea mineral exploration and exploitation activities. While this agenda does not appear to have directly impacted the development of proposed Final Regulations and Standards and Guidelines by the ISA, any such moratorium would have a material adverse effect on our business.

The environmental permitting process, which includes considerations of the impacts of our activities on the biodiversity of the CCZ, is expected to involve a series of checks and balances with reviews being conducted by the ISA, including technical evaluations by the ISA Secretariat and the Legal and Technical Commission (the "LTC"). The recommendations of the LTC will then go before the ISA Council ("Council"), a core policy-making body of the ISA, which will then review and, if it deems appropriate, approve the contractor's application. It would require a two-thirds majority of the Council to reject a development proposal that is recommended to it by the LTC. There are no assurances that the work our subsidiaries have done to date, or their contemplated future operations will satisfy the final environmental rules and regulations adopted by the ISA, and any future changes could delay the timing of such submissions to the ISA or our subsidiaries operations more generally, which could have a material adverse effect on our business. Sponsoring State approvals and permits are currently and may in future be required in connection with our operations. To the extent such approvals are required and not obtained, our subsidiaries may be curtailed or prohibited from proceeding with planned exploration or development of mineral properties. Failure to comply with applicable laws, regulations, and permitting requirements may result in enforcement actions thereunder, including orders issued by regulatory or judicial authorities causing operations to cease or be curtailed and may include corrective measures requiring capital expenditures, installation of additional equipment, or remedial actions. Parties engaged in collection operations may be required to compensate those suffering loss or damage by reason of the collection activities and may have civil or criminal fines or penalties imposed for violations of applicable laws and regulations.

We may become subject to environmental liabilities as a result of noncompliance or newly imposed regulations.

All of the exploration and development operations of our subsidiaries will be subject to environmental permitting and regulations, which can make operations expensive or prohibit them altogether. We may also be subject to potential risks and liabilities associated with pollution of the environment that could occur as a result of our subsidiaries' exploration, development, and production activities.

To the extent that a subsidiary becomes subject to environmental liabilities, the payment of such liabilities, or the costs incurred to remedy environmental pollution, would reduce funds otherwise available to us, which could have a material adverse effect on our business. If we or our subsidiaries are unable to fully remedy an environmental problem, they might be required to suspend operations or enter into interim compliance measures pending completion of the required remedy. The potential exposure could be material to our business.

All of our exploration, development, production and processing activities will be subject to regulation under certain environmental laws and regulations. Our subsidiaries may be required to obtain permits for their activities. They may be required to update and review permits from time to time, and may also be subject to environmental impact analyses and public review processes prior to the approval of any future activities. It is possible that future changes in applicable laws, regulations and permits, or changes in their enforcement or regulatory interpretation by local governments, sponsor states, and other regulatory bodies, could have a significant impact on our business.

Resource and Market Risks.

The grade and quality of the polymetallic nodule deposits that we intend to develop are estimates, and there are no guarantees that such deposits will be suitable for collecting or commercialization.

The grades and abundances of the seafloor polymetallic nodule deposits that we intend to develop and commercialize are estimates that may prove to be inaccurate. While limited samples have been collected and analyzed, there are no guarantees that our estimates of quality will hold true with respect to the polymetallic nodule deposits that we are able to collect from the seafloor. Actual nodule grades and abundances may vary from our estimates, which could have a material adverse impact on our projections for future revenues, cash flows, royalties, and development and operating expenditures.

In addition, the precise form of mineral occurrence, grade, abundance, and tonnage, which is projected based on the mapping and analysis of samples, are not yet known. There is a risk that the sampling and imaging that has been completed to date, and that which will need to be completed in the future, has not and/or will not allow us to accurately quantify the tonnage, abundance and grade of identified polymetallic nodule deposits. Moreover, the projections or classifications based on such sampling could result in inaccurate environmental, geological or metallurgical assumptions (including with respect to the size, grade, abundance, and/or recoverability of minerals) or incorrect assumptions concerning economic recoverability.

No seafloor polymetallic nodule deposit has ever been commercially collected, and our offshore collection technology and development plans and processes may not be sufficient to accomplish our objectives.

Seafloor polymetallic nodules have never been commercially mined, and there is a risk that our offshore collection and recovery methods and the equipment that we intend to utilize during this process may not be adequate for the economic development of seafloor polymetallic nodule deposits. The equipment and technology that we intend to utilize has not been fully proven in such subsea conditions and for this specific material and application, and failure to adapt existing equipment or to develop suitable equipment or recovery and development techniques for the prevailing material and seafloor conditions would have a material adverse effect on the business of our subsidiaries, and the results of their operations and financial condition. We have partnered with Allseas, a leading global offshore contractor, to undertake a pre-production pilot collection system test in which a collector vehicle, a riser and lift system and surface production vessel will be tested. Although we expect the pilot collection system test to be successful, there can be no assurance that it will be, or that their technology will eventually be adequate for full scale commercial production.

On March 16, 2022, NORI and Allseas entered into a non-binding term sheet for the development and operation of the Project Zero System. NORI and Allseas intend to equally finance all costs related to developing and getting Project Zero System into production currently. The parties intend to detail and revise these cost estimates in the definitive agreement contemplated by the non-binding term sheet, which the parties expect to enter into no later than December 31, 2022, following the completion of the pilot collection tests. There can be no assurances, however, that we will enter into definitive agreements with Allseas contemplated by the non-binding term sheet in a particular time period, or at all, or on terms similar to those set forth in the non-binding term sheet, or that if such definitive agreements are entered into by us that the proposed commercial systems and second production vessel will be successfully developed or operated in a particular time period, or at all and hence, we may be delayed in obtaining offshore collection equipment in the event we do not reach agreement with Allseas and have to develop such equipment on our own or through new third-party contractual relationships.

We are reliant on third parties to conduct independent analyses with respect to our business, and any inaccuracies in such analyses could have a material adverse effect on our offshore collection and onshore processing and refining objectives.

We rely upon third-party consultants, engineers, analysts, scientists, and others to provide analyses, reviews, reports, advice, and opinions regarding our potential projects. For example, the NORI Initial Assessment and the TOML Mineral Resource Statement, contain mineral resource estimates and other information with respect to our contract areas. There is a risk that such analyses, reviews, reports, advice, opinions, and projects are incorrect, in particular with respect to resource estimation, process development, and recommendations for products to be produced, as well as with respect to economic assessments, including estimating the capital and operating costs of our project and forecasting potential future revenue streams. Uncertainties are also inherent in such estimations.

Mineral resource estimates from the contract areas of NORI and TOML are only estimates.

Estimates of mineral resources from the contract areas of NORI and TOML described in our SEC filings and reported in technical reports prepared by AMC are only estimates and depend on geological interpretation and statistical inferences or assumptions drawn from survey data and recovery and sampling analysis, which might prove to be materially inaccurate. While these reports have been provided by experts, there is a degree of uncertainty attributable to the estimation of mineral resources. Mineral reserves have not been defined and will require completion of further studies. Until mineral resources are actually collected and processed, the quantity of metal and nodule abundance must be considered as estimates only and no assurance can be given that the indicated levels of metals will be produced. In making determinations about whether to advance any of our projects to further development, we must rely upon calculated estimates for the mineral resources and grades of mineralization in our contract areas and estimated equipment production rates, equipment availability and utilization and collection efficiency.

The estimation of mineral reserves and mineral resources is an iterative process and is, at times, partially dependent upon the judgment of the persons preparing the estimates. The process relies on the quantity and quality of available data and is based on knowledge, experience, statistical analysis of data and industry practices. Valid estimates made at a given time may significantly change when new information becomes available.

Estimated mineral reserves and mineral resources may have to be recalculated based on changes in metal prices, further exploration or development activity or actual production experience. This could materially and adversely affect estimates of the volume or grade of mineralization, estimated recovery rates or other important factors that influence mineral reserves and mineral resources estimates. The extent to which mineral resources may ultimately be reclassified as mineral reserves is dependent upon the demonstration of their profitable recovery. Any material changes in volume and grades of mineralization will affect the economic viability of placing a property into production and a property's return on capital. We cannot provide assurance that polymetallic nodules can be collected or processed profitably.

The mineral resource estimates in our SEC filings have been determined and valued based on assumed future metal prices, cut-off grades, production rates and operating costs that may prove to be inaccurate. Extended declines in the market price for nickel, manganese, copper and cobalt may render portions of our mineralization uneconomic and result in reduced reported volume and grades, which in turn could have a material adverse effect on our financial performance, financial position and results of operations.

In addition, inferred mineral resources have a great amount of uncertainty as to their existence and their economic and legal feasibility. You should not assume that any part of an inferred mineral resource will be upgraded to a higher category or that any of the mineral resources will be reclassified as mineral reserves. Currently 97% of the NORI Area D resource is classified into indicated and measured categories.

Our business is subject to significant risks, and we may never develop minerals in sufficient grade or quantities to justify commercial operations.

Mineral resource exploration, development, and operations are highly speculative and are characterized by a number of significant risks, including, among other things, unprofitable efforts resulting not only from the failure to discover mineral resources, and from finding mineral resources which, though present, are insufficient in quantity and quality to return a profit from production. Once mineralization is discovered, it may take a number of years from the initial exploration phases before production is possible, during which time the potential feasibility of the project may change adversely. Substantial expenditures are required to establish mineral resources and reserves, to determine processes to collect and transport the minerals and, if required, to construct processing facilities.

No deep-sea polymetallic properties in the CCZ that have been identified have as of today been developed into production. Exploration and exploitation risks exist in the discovery, location, definition and recovery of seafloor polymetallic nodule deposits. Given that no seafloor polymetallic nodule deposit has ever been commercially developed, such risks may have a material impact on our ability to accomplish our objectives. Operations may be affected by the availability of suitable vessels and equipment, prevailing sea conditions, changes in meteorological conditions and climate change, currents close to the seafloor and throughout the water column, recovery of materials sampled, lack of experience in delineating deposits, or unsuitability of equipment for recovering such material in prevailing conditions. Substantial expenditures are required to establish mineral reserves, to develop metallurgical processes, and to construct collection and transportation vessels, and we will be required to rely upon the expertise of consultants and others for exploration, development, construction and operational knowhow, and such consultants and third parties may not always be available to support our operations. If we are not able to obtain such expertise or identify alternative sources of expertise, our operations and financial results will be negatively impacted.

While we believe that seafloor polymetallic nodules in the contract areas of our subsidiaries account for some of the world's largest aggregated estimated deposits of battery metals, no assurance can be given that minerals will be discovered in sufficient grade or quantities to justify commercial operations. Whether an exploration property will be commercially viable depends on a number of factors, including: the particular attributes of the deposit, such as size, grade and proximity to infrastructure; metal prices, which are highly cyclical; availability of and effectiveness of technology to recover, trans-ship, transport and process nodules; government regulations, including regulations relating to prices, taxes, royalties, land tenure, land use, and environmental protection; availability of required personnel, third-party partners and contractors, any required financing and commercial demand in the marketplace for such metals. The precise impact of these factors cannot accurately be predicted, but the combination of these factors may result in the inability of our subsidiaries to operate or generate an adequate return on invested capital.

While we and our subsidiaries will evaluate the political and economic factors in determining an exploration strategy, there can be no assurance that significant restrictions will not be placed on intended development areas. Such restrictions may have a material adverse effect on our business and results of operation.

Uncertainty in our estimates of polymetallic nodule deposits could result in lower than expected revenues and higher costs.

We base our estimates of polymetallic nodule deposits on engineering, economic, and geological data assembled and analyzed by outside firms, which are reviewed by third-party expert consultants including engineers and geologists. Such estimates, however, are necessarily imprecise and depend to some extent on professional interpretation, including statistical inferences drawn from available data, which may prove unreliable. There are numerous uncertainties inherent in estimating quantities and qualities of the polymetallic nodules that we intend to collect and the costs associated therewith, including many factors beyond our control. Estimates of economically recoverable minerals necessarily depend upon a number of variable factors and assumptions, all of which may vary considerably from actual results, such as:

- environmental, geological, geotechnical, collecting and processing conditions that may not be fully identified by available data or that may differ from experience;
- changes to the strategic approach to collecting and processing, which will depend in large part on market demand, corporate strategy and other prevailing economic and financial conditions;

[Table of Contents](#)

- assumptions concerning future prices of products (including, most notably, battery metals and manganese ore) foreign exchange rates, production rates, process recovery rates, transportation costs, operating costs, capital costs and reclamation costs; and
- assumptions concerning future effects of regulation, including the issuance of required permits and taxes by governmental agencies and foreign government policies relating to our collecting of the mineral resources from our contract areas.

Uncertainty in estimates related to the availability of polymetallic nodules could result in lower-than-expected revenues and higher than expected costs or a shortened estimated life for our projects. Fluctuations in factors out of our control such as changes in future product pricing, foreign government policies and foreign exchange rates can have a significant impact on the estimates of mineral resources and reserves and can result in significant changes in the quantum of our resources and/or reserves period-to-period.

We operate in a competitive industry, and there are no assurances that our efforts will be successful.

The battery metals production industry is capital intensive and competitive. Production of battery materials and manganese alloys is largely dominated by Chinese competitors. These competitors may have greater financial resources, as well as other strategic advantages to operate, maintain, improve and possibly expand their facilities. Additionally, domestic Chinese resources firms have historically been able to produce minerals and/or process metals from land-based operations at relatively low costs due to domestic economic and regulatory factors, including less stringent environmental and governmental regulations and lower labor and benefit costs. In addition to three contracts held by TMC's subsidiaries and partners, 16 other entities (ISA Member States and private companies sponsored by ISA Member States) currently hold ISA Exploration Contracts for polymetallic nodules. If and when they move into the exploitation phase, each of these contract-holders could become potential competitors with respect to the collection of polymetallic nodules and the production of nickel, manganese, copper and cobalt products. Some of these contract holders may possess greater financial and/or technical resources. Furthermore, several nation states are working on developing polymetallic nodule resources inside their Exclusive Economic Zones ("EEZs"), with the Cook Islands granting three exploration contracts for polymetallic nodules in February 2022. There is increasing competition from new and existing marine mineral players for the availability of marine exploration and support vessels, related marine equipment and specialized personnel, desirable exploration areas, suitable offshore collection and onshore processing equipment, and available capital. There is a risk that competitors may find more promising resources, identify or develop more economic technologies, enter into strategic partnerships that constrain our optionality, or may develop novel methods to collect nodules from the seafloor or process nodules into metals that are more economic than we currently contemplate.

The prevailing market prices of nickel, manganese, copper, cobalt, and other commodities will have a material impact on our ability to achieve commercial success.

The profitability of our nodule collection operations is significantly affected by changes in the market price of battery metals (nickel, copper and cobalt) and manganese ores and the cost of power, natural gas, coal, marine fuels, among other commodities and supply requirements. Prices of such metals are affected by numerous factors beyond our control, including: military conflict; prevailing interest rates and returns on other asset classes; expectations regarding inflation, monetary policy and currency values; speculation; governmental and exchange decisions regarding the disposal of metal stockpiles; political and economic conditions; available supplies of battery metals from mine production, inventories and recycled metal; sales by holders and producers of battery metals; and demand for products containing nickel, manganese, copper and cobalt. The price of nickel, manganese, copper, cobalt and other minerals and natural gas has fluctuated widely in recent years. Depending on the prevailing price of nickel, manganese, copper, and cobalt, and the cost of power, natural gas, chemical reagents, marine fuels, cash flow from our metal production operations may not be sufficient to cover our operating costs or the costs to service any outstanding debt. In addition, our proposed full scale production plans would involve placing a large percentage of global manganese production in the market, and we may be constrained in our ability to sell such large volumes, or such production may negatively impact the market price of manganese, which would, in either case, negatively impact our overall economic position.

We are not currently party to any commodity hedging contracts, as we do not yet have any production. Debt financing may not be available on commercially reasonable terms, or at all.

We may be adversely affected by fluctuations in demand for nickel, manganese, copper, cobalt, and other commodities.

Because our revenue is expected to be from the collection and processing of minerals, changes in demand for, and taxes and other tariffs and fees imposed upon, such minerals and derived mineral products (most notably, nickel, manganese, copper, and cobalt) could significantly affect our profitability. A prolonged or significant economic contraction in the U.S. or worldwide could put downward pressure on market prices of minerals. Protracted periods of low prices for minerals could significantly reduce revenues and the availability of required development funds in the future. This could cause substantial reductions to, or a suspension of, our exploration, collecting and production operations, and impair asset values.

Demand for our minerals may be impacted by changes in supply dynamics and sources, and changes in demand for downstream products, including batteries for electric vehicles and energy storage that consume high volumes of the metals we intend to produce, as well as demand for manganese alloys used in steel-making, the targeted market for most of our manganese production. Lack of growth or material increases in new sources of supply in this or in any other related markets may adversely affect the demand for our minerals and any related products, and if the market for these critical existing and emerging technologies does not grow as we expect, grows more slowly than we expect, or if the demand for our products in these markets decreases, then our business, prospects, financial condition and operating results could be harmed. Notably, our financial success in part will depend in part on the expansion of the global manganese market to consume the additional volume of manganese that we intend to produce.

In contrast, extended periods of high commodity prices may create economic dislocations that could be destabilizing to the supply and demand of minerals, and ultimately to the broader markets. Periods of high market prices for our minerals are generally beneficial to our financial performance. However, strong prices also create economic pressure to identify or create new sources of supply and alternate technologies requiring consumption of metals that ultimately could depress future long-term demand for nickel, cobalt, copper and related products, and at the same time may incentivize development of competing properties.

We may experience difficulty in creating market acceptance for a novel manganese product.

We will be producing a novel manganese silicate product which does not yet have recognition in the marketplace with customers. Metallurgical testwork, market studies by CRU International Limited and initial engagement with customers indicate that this manganese silicate product will be a premium product with high value in use as an input into silicomanganese alloy production that we believe will receive strong market acceptance. However, mineral processing industries may be slow to change feed stocks and suppliers, even in the face of potential advantages.

Additionally, manganese silicate is not a conventional mineral product and may require additional approvals for export and import from our processing facilities to our future customers.

Our ability to generate revenue will be diminished if we are unable to compete with substitutions for the minerals that we intend to process.

Technology changes rapidly in the industries and end markets that utilize our materials. If these industries introduce new technologies or products that no longer require the metals that we intend to collect and process, or if suitable substitutes become available, it could result in a decline in demand for our metal products. If the demand for our metal products decreases, it will have a material adverse effect on our business and the results of our operations and financial condition.

Social License and Public Perceptions Risks.

Negative perceptions related to the offshore collection of polymetallic nodules could have a material adverse effect on our business.

There exist certain negative perceptions related to acquiring metals produced from deep-sea minerals. Some companies in the EV supply chain have recently expressed reservations about using battery metals derived from deep-sea minerals (including polymetallic nodules), pending more research on the impacts of deep-sea mineral extraction operations on marine biodiversity and ecosystem function. If this position gains broad traction by governments and commercial customers alike in relation to battery metals sourced from polymetallic nodules, it could have a material impact on our business and operations.

Reduced growth in the adoption of electric vehicles by consumers may change our strategy and our business and operating results may be impacted.

Given that we have focused part of our operating plan on the sale of nodule-derived battery metals into the EV supply chain, our growth may be affected by the adoption by consumers of electric vehicles. The market for electric vehicles is relatively new, rapidly evolving, characterized by rapidly changing technologies, price competition, additional competitors, evolving government regulation and industry standards, frequent new vehicle announcements and changing consumer demands and behaviors. While it has been projected that demand for such electric vehicles will surge over time, if the market for electric vehicles does not develop as we expect, or develops more slowly than we expect, our business and operating results may be impacted.

We and our partners may be adversely impacted by pressure and lobbying from non-governmental organizations.

Like other businesses that operate in the resources industry, our company, and our partners, are subject to pressure and lobbying from non-governmental organizations, particularly with respect to environmental concerns, including impacts on the deep-sea environment. There is a risk that the demands and actions of such non-governmental organizations may cause significant disruption to our business, which could have a material adverse effect on our operations and financial condition. It is possible that direct action from environmental groups could physically impact ongoing operation during exploration, project development and commercial operations.

Offshore and Onshore Technology Risks and Operational Risks.

Offshore collection and onshore processing and refining operations pose inherent risks and costs that may negatively impact our business.

Offshore collection and onshore processing and refining operations involve many hazards and uncertainties, including, among others:

- technical and operational challenges in the offshore collection operations and scaling up of such operations;
- challenges in transferring nodules to transport vessels and delivering nodules to port;
- industrial accidents;
- unusual and unexpected maritime conditions;
- unexpected seafloor conditions;
- onshore metallurgical or other processing problems;
- unexpected environmental conditions, including contamination or leakage;
- periodic interruptions due to inclement or hazardous weather conditions or other acts of nature;
- fire;
- piracy and disruptive action by non-governmental actors opposed to deep-sea mineral extraction;
- organized labor disputes or work slowdowns;
- mechanical equipment failure and facility performance problems;
- the availability of financing, market demand, critical technology and equipment, and skilled labor; and
- the inability of suppliers to provide key process inputs like electricity, gas, coal and processing reagents on a timely basis at the prices that have been forecast.

These occurrences could result in damage to, or destruction of, production facilities, personal injury or death, environmental damage, delays in processing, increased production costs, asset write downs, monetary losses and legal liability, any of which could have an adverse effect on our results of operations and financial condition and adversely affect our projected development and production estimates. In addition, our operations could be interrupted by or negatively influenced by non-governmental actors which could negatively impact our or our subsidiaries' ability to operate in the CCZ and international markets, obtain capital, collect, transport, process or sell metals, or otherwise conduct business.

Our business is contingent on our ability to successfully identify, collect and process polymetallic nodules, and in doing so, we will need to rely on certain existing and future strategic relationships, some of which we may be unable to maintain and/or develop.

In conducting our business, we will rely on continuing existing strategic relationships as well as new relationships in a variety of disciplines, including the offshore equipment and services industries, the onshore mineral processing industry, and others involved in the mineral exploration industry. We will also need to continue to develop new relationships with third-party contractors, as well as with certain regulatory and governmental departments.

For example, we have been working with Hatch, a global engineering, project management, and professional services firm, to develop onshore processing technology for the production of readily saleable copper and manganese products, as well as products such as high-grade nickel and cobalt sulfates for the electric vehicle battery markets. In connection therewith, Hatch has developed a near-zero solid waste flowsheet. We are also party to certain agreements with Allseas, pursuant to which, among other things, Allseas has agreed to design, engineer and construct an integrated offshore collection system to collect nodules from NORI Areas, and to assist with shipping efforts thereafter. Allseas is contractually required to develop a test system to demonstrate this capability, but it is not certain that Allseas will convert, or will be able to convert such system into a full-scale commercial operation or that we will reach contractual terms with Allseas for such commercial arrangements. If we are unable to enter into definitive agreements with Allseas for the use of its technology for the collection, transport and commercial production of polymetallic nodules, it will have a material adverse effect on our business.

There can be no assurance that we will be able to continue to maintain and develop our existing relationships, or that we will be able to form the new relationships that are required for our business to be successful. For example, our agreement with Maersk to provide marine cruises and management services expired in January 2022, following the completion of the NORI Area D baseline campaigns. We have solicited proposals from third parties to provide a survey vessel and specialized services required to support the implementation of the collector test monitoring survey planned for 2022. However, there can be no assurance that we will be able to secure an agreement with a third party for a new survey vessel on acceptable terms or at all.

Also on March 4, 2021, we issued the Allseas Warrant to Allseas, which shall vest upon successful completion of CCZ trial using the PMTS. A maximum of 11.6 million warrants to purchase common shares will vest if the CCZ trials using the PMTS are completed by September 30, 2023, gradually decreasing to 5.8 million warrants to purchase common shares if the CCZ trials using the PMTS are completed after September 30, 2025. The Allseas Warrant was issued to Allseas in lieu of any future obligation to issue the Success Fee Shares. The Allseas Warrant shall vest only upon (and not before) the successful completion of the CCZ trials using the PMTS and will expire on September 30, 2026. The warrant credit value shall be determined as of June 1, 2022 based on the closing trading price of the Common Shares (“Warrant Credit Value”). In the event that the Warrant Credit Value is greater than \$150,000,000, then on the vesting date of the Allseas Warrant, we shall receive a “credit” for the amount by which such Warrant Credit Value exceeds \$150,000,000. We will be able to exchange such credit value for future goods and services from Allseas. No amount will be due or receivable under the Allseas Warrant if the Warrant Credit Value is under \$150,000,000 on June 1, 2022.

Some of the offshore equipment that we will need to accomplish our objectives has not been manufactured and/or tested.

Our subsidiaries will need to rely on high-value equipment for the offshore collection and transport of materials. Much of this equipment, particularly as it pertains to subsea engineering and recovery systems, has yet to have completion of engineering, and has not been constructed and fully tested, and may not be suitable or may prove unreliable, and may not be delivered to us on a timely basis, thereby delaying our contemplated timetable. Moreover, our future needs with respect to subsea engineering and recovery systems have yet to be fully determined, and as such, the capital costs, performance, reliability, and maintenance associated with the necessary equipment is currently unknown. There can be no guarantees that the necessary subsea engineering and recovery systems can be developed, or if developed, that such systems will be deployable in an economically viable manner. Any equipment downtime or delayed mobilization of equipment may impact operations. Additionally, as we launch exploration, collection, and development initiatives, our subsidiaries may need to compete for the availability of suitable vessels and equipment, even though we have a close commercial relationship with our partners, there is a risk that certain vessels and equipment will be under long-term charter and will thus not be available to them when needed, if at all.

The polymetallic nodules that we may recover will require specialized onshore processing and refining, and there is no certainty that such processes will result in a recovery of metals that is consistent with our expectations, or that we will be able to develop or otherwise access processing plants that are suitable for our purposes.

The polymetallic nodules that our subsidiaries may collect, contain several base metals in varying concentrations, which will require processing and refining in metallurgical plants. To date, no nodules have been processed and refined into metal products commercially, and there is a risk that such processing and refining may not be economically viable and/or that the nodules will contain elements or compounds that would render them unsuitable for selected processing and refining flowsheet.

While Hatch, a global engineering, project management, and professional services firm, has helped us to develop a processing flowsheet with near-zero solid waste and is working with us on a pilot plant program, the actual percentage recovery of metals may vary significantly from that forecast, and we are in the process of conducting a pilot scale metallurgical test-work program to determine our ability to expand such program into a full operational system.

Should our offshore nodule collection plans become successful, we intend to develop onshore processing plants or partner with existing onshore processing partners. Furthermore, our future needs with respect to such processing plants have yet to be fully determined, and as such, the capital costs, performance, reliability, and maintenance of such plants is currently uncertain. While we believe that we have identified specific sites for the potential construction of such plants (based on factors such as proximity to deep-water ports, cost access to renewable electric power and natural gas, and proximity to customers), there is a risk that we will be unable to secure one or more of these sites on suitable terms. In the event that we are unable to secure one or more of the sites we have identified, or if construction delays impact our ability to develop one or more of such sites, our ability to process polymetallic nodules would be detrimentally impacted. Additionally, there can be no guarantees that such plants can be developed, or if developed, that such plants will perform in an economically viable manner or provide the projected metal recovery rates at the estimated project capital and operating costs, which could impact projections for our future revenues, cash flows, royalties, and development and operating expenditures.

We have identified potential tolling facilities to process nodules into two products, manganese silicate and copper-nickel-cobalt alloy, or matte and developed a marketing strategy to place the latter products into existing smelting and refining facilities. There is no guarantee that these facilities will be available at the required times or that we would be able to secure them at commercially attractive rates. Additionally, even if we are able to secure appropriate processing facilities (either through ground-up construction or tolling arrangements), there is no guarantee that we will be able to provide them with the required nodule feedstocks at the required times. Accordingly, the timing in which we expand our operations may vary depending on geological, operational and financial developments, in addition to regulatory approvals from the ISA, among other factors, and these may impact our revenue and financial performance.

Our exploration and polymetallic nodule collecting activities may be affected by natural hazards, which could have a material adverse effect on our business.

Deep-sea mineral exploration and collection activities are inherently difficult and dangerous and may be delayed or suspended by severe weather events, sea conditions or other natural hazards, including volcanos, storms, hurricanes, tsunamis and unpredictable weather patterns. In addition, even though sea conditions in a particular location may be somewhat predictable, the possibility exists that unexpected conditions may occur that adversely affect our operations. Nodule collection activities may be subject to interruptions resulting from weather and related marine conditions that adversely affect our collection operations or the ports of delivery, and any such delays could have a material adverse effect on our business.

Fluctuations in transportation costs or disruptions in transportation services or damage or loss during transport could decrease our competitiveness or impair our ability to supply polymetallic nodules, processed minerals or products to our customers, which could adversely affect our results of operations.

Once our subsidiaries have been able to successfully collect the polymetallic nodules, they will be required to transport them to onshore facilities for processing. Furthermore, once they have reached a point of commercialization, we will need to transport our products to our future customers, wherever they may be located. Finding affordable and dependable transportation is important because it allows us to supply customers around the world. Labor disputes, embargos, sanctions, government restrictions, work stoppages, pandemics, derailments, damage or loss events, adverse weather conditions, vessel groundings inhibiting access to key navigation routes, other environmental events, changes to rail or ocean freight systems or other events and activities beyond our control could interrupt or limit available transport services, which could result in customer dissatisfaction and loss of sales potential and could materially adversely affect our results of operations.

Actual capital costs, financing strategies, operating costs, production and economic returns may differ significantly from those we have anticipated and there can be no assurance that any future development activities will result in profitable metal production operations.

The actual operating costs of our subsidiaries to collect polymetallic nodules, transport, process and refine such nodules commercially will depend upon changes in the availability of financing or partners who undertake capital developments in partnership with us, and prices of labor, equipment and infrastructure, shipping costs, variances in ore recovery from those currently assumed, operational risks, changes in governmental regulation, including taxation, environmental, permitting and other regulations and other factors, many of which are beyond our control. Due to any of these or other factors, our capital and operating costs may be significantly higher than those set forth in the NORI Initial Assessment and TOML Mineral Resource Statement prepared by AMC and filed as exhibits to the registration statement to which this prospectus forms a part. As a result of higher capital and operating costs, our financing ability may be impacted, and this may be further affected by lower commodity prices in the international markets that could impact production or economic returns which may differ significantly from those set forth in the NORI Initial Assessment and TOML Mineral Resource Statement and there can be no assurance that any of our development activities will result in profitable operations.

We have a limited operating history, and there can be no assurance that we will be able to commercially develop our resource areas or achieve profitability in the future.

We have a limited operating history, and we expect that our losses will continue until we achieve profitable commercial production. NORI currently intends to explore and collect mineral resources in the NORI areas identified in the exploration contract executed by NORI with the ISA, and we hope to expand such operations if viable in certain other parts of the CCZ, including by TOML in the TOML areas identified in the exploration contract executed between TOML and the ISA and DGE in the Marawa areas identified in the exploration contract executed by Marawa with the ISA. Although NORI expects to achieve early-stage commercial production for the NORI Area D on or around 2024, there can be no assurance that it will be able to commercially develop these properties or that it will be able to generate profits in the future.

Our operating expenses and capital expenditures will increase in the future as consultants and new employees are engaged, equipment associated with advancing exploration is leased or purchased, and properties are developed. There can be no assurance that we will generate any revenues or achieve profitability, or that the assumed levels of expense associated with our exploration, development, and commercialization processes will prove to be accurate.

Work stoppages or similar difficulties could significantly disrupt our operations, reduce our revenues and materially adversely affect our results of operations.

A work stoppage by any of the third parties providing services in connection with our operations or those of our strategic partners (such as for onshore or offshore operations) could significantly disrupt our activities, reduce our future revenues and materially adversely affect our results of operations.

A shortage of skilled technicians and engineers may further increase operating costs, which could materially adversely affect our results of operations.

Efficient collection, transport and processing using modern techniques and equipment requires skilled technicians and engineers. In addition, our optimization and eventual downstream efforts will significantly increase the number of skilled operators, maintenance technicians, engineers and other personnel required to successfully operate our business. If we are unable to hire, train and retain the necessary number of skilled technicians, engineers and other personnel there could be an adverse impact on our labor costs and our ability to reach anticipated production levels in a timely manner, which could have a material adverse effect on our results of operations.

We depend on key personnel for the success of our business. The loss of key personnel or the hiring of ineffective personnel could negatively impact our operations and profitability.

We depend on the services of our senior management team, our board of directors, our strategic partners and other key personnel. The loss of the services of any member of senior management, our board of directors or a key employee, or similar personnel within our strategic partners could have an adverse effect on our business. We and our partners may not be able to locate, attract or employ on acceptable terms qualified replacements for senior management, board of directors or other key employees if their services are no longer available.

Our growth will depend on our ability to execute on our plans and expand our operations and controls while maintaining effective cost controls.

Deep-sea exploration, nodule collection, and processing is an emerging industry, and our ability to implement our strategy requires effective planning and management control systems. Our plans may place a significant strain on our management and on our operational, financial and personnel resources. As such, our future growth and prospects will depend on our ability to manage this growth and to continue to expand and improve operational, financial and management information and quality control systems on a timely basis, while at the same time maintaining effective cost controls. Any failure to expand and improve operational, financial and management information and quality control systems in line with our growth could have a material adverse effect on our business, financial condition and results of operations. There are also risks associated with establishing and maintaining systems of internal controls.

We are dependent upon information technology systems, which are subject to cyber threats, disruption, damage and failure.

We depend upon information technology systems in the conduct of operations. Such information technology systems are subject to disruption, damage or failure from a variety of sources, including, without limitation, computer viruses, security breaches, cyber-attacks, natural disasters and defects in design. Cybersecurity incidents, in particular, are evolving and include, but are not limited to, malicious software, attempts to gain unauthorized access to data and other electronic security breaches that could lead to disruptions in systems, unauthorized release of confidential or otherwise protected information or the corruption of data. Various measures have been implemented to manage our risks related to information technology systems and network disruptions. However, given the unpredictability of the timing, nature and scope of information technology disruptions, we could potentially be subject to downtimes, operational delays, the compromising of confidential or otherwise protected information, destruction or corruption of data, security breaches, other manipulation or improper use of our systems and networks or financial losses from remedial actions, any of which could have a material adverse effect on our business, operating results and financial condition.

Our business is subject to a variety of risks, some of which may not be covered by our future or existing insurance policies.

In the course of the exploration, development, and production of our mineral resource properties, we may be subject to a variety of risks that could result in: (i) damage to, or destruction of, transportation vessels and processing facilities, (ii) personal injury or death, (iii) environmental damage, (iv) delays in collecting, transporting or processing, (v) monetary losses, (vi) natural disasters, (vii) environmental matters, and (viii) legal liability, among others. It is not always possible to fully insure against such risks, and we may determine not to insure against all such risks as a result of high premiums or for other reasons. Should such liabilities arise, they could reduce or eliminate any future profitability and result in an increase in cost and a decline in the value of our securities. We cannot be certain that insurance for some or all of these risks will be available on acceptable terms or conditions, if at all, and in some cases, coverage may not be acceptable or may be considered too expensive relative to the perceived risk.

We may not be able to adequately protect our intellectual property rights. If we fail to adequately enforce or defend our intellectual property rights, our business may be harmed.

Much of the technology used in the markets in which we compete is or may become protected by patents and trade secrets, and our commercial success will depend in significant part on our ability to access, obtain and maintain patent and trade secret protection for future products and methods or those of any of our strategic partners such as Allseas or onshore processing partners. To compete in these markets, we rely or may need to rely on a combination of trade secret protection, nondisclosure and licensing agreements, patents and trademarks to establish and protect our proprietary intellectual property rights. Our intellectual property rights (or those of our partners) may be challenged or infringed upon by third parties, or we may be unable to maintain, renew or enter into new license agreements with third-party owners of intellectual property on reasonable terms. In addition, our intellectual property may be subject to infringement or other unauthorized use outside of the U.S. In such case, our ability to protect our intellectual property rights by legal recourse or otherwise may be limited, particularly in countries where laws or enforcement practices are undeveloped or do not recognize or protect intellectual property rights to the same extent as the U.S. Unauthorized use of our intellectual property rights (or those of our partners) or our inability (or the inability of our partners) to preserve our existing intellectual property rights (or those of our partners) could adversely impact our competitive position and results of operations. The loss of our patents could reduce the value of the related products. In addition, the cost to litigate infringements of our patents, or the cost to defend ourselves against patent infringement actions by others, could be substantial and, if incurred, could materially affect our business and financial condition.

Proprietary trade secrets and unpatented know-how may become important to our business. We will likely rely on trade secrets to protect certain aspects of our business systems and designs, especially where we do not believe that patent protection is appropriate or obtainable. However, trade secrets are difficult to protect. Our employees, consultants, contractors, outside scientific collaborators and other advisors may unintentionally or willfully disclose our confidential information to competitors, and confidentiality agreements may not provide an adequate remedy in the event of unauthorized disclosure of confidential or proprietary information. Enforcing a claim that a third-party illegally obtained and is using our trade secrets is expensive and time consuming, and the outcome is unpredictable. Moreover, our competitors may independently develop equivalent knowledge, methods and know-how. Failure to obtain or maintain trade secret protection could adversely affect our competitive business position.

We or our partners may not be able to obtain necessary patents and the legal protection afforded by any patents may not adequately protect our or our partners' rights or permit us to gain or keep any competitive advantage.

Our ability (or that of our partners) to obtain necessary patents is uncertain, and the legal protection to be afforded by any patents we (or they) may be issued in the future may not adequately protect our (or their) rights or permit us (or them) to gain or keep any competitive advantage necessary for our operations or our partnerships. In addition, the specific content required of patents and patent applications that are necessary to support and interpret patent claims is highly uncertain due to the complex nature of the relevant legal, scientific and factual issues. Changes in either patent laws or interpretations of patent laws in the U.S. or elsewhere may diminish the value of our intellectual property or narrow the scope of our patent protection. Even if patents are issued regarding our products and processes, our competitors may challenge the validity of those patents. Patents also will not protect our products and processes if competitors devise ways of making products without infringing our patents.

If we infringe, or are accused of infringing, on the intellectual property rights of third parties, it may increase our costs or prevent us from being able to commercialize new products.

There is a risk that we (or our partners) may infringe, or may be accused of infringing, the proprietary rights of third parties under patents and pending patent applications belonging to third parties that may exist in the U.S. and elsewhere in the world that relate to our products and processes (or those of our strategic partners). Because the patent application process can take several years to complete, there may be currently pending applications that may later result in issued patents that cover our products and processes. In addition, our products and processes may infringe existing patents.

Defending ourselves against third-party claims, including litigation in particular, would be costly and time consuming and would divert management's attention from our business, which could lead to delays in our exploration, collecting, processing, and commercialization efforts. If third parties are successful in their claims, we might have to pay substantial damages or take other actions that are adverse to our business. As a result of intellectual property infringement claims, or to avoid potential claims, we might:

- be prohibited from, or delayed in, selling or licensing some of our products or using some of our processes unless the patent holder licenses the patent to us, which it is not required to do;
- be required to pay substantial royalties or grant a cross license to our patents to another patent holder; or
- be required to redesign a product or process so it does not infringe a third-party's patent, which may not be possible or could require substantial funds and time.

In addition, we could be subject to claims that our employees, or we, have inadvertently or otherwise used or disclosed trade secrets or other proprietary information of third parties.

If we are unable to resolve claims that may be brought against us by third parties related to their intellectual property rights on terms acceptable to us, we may be precluded from offering some of our products or using some of our processes.

In addition, we have not obtained definitive global trademark protection for the name "The Metals Company" and we may not be able to secure such protection over time. If we are unable to secure such protection, we may need to rebrand or otherwise modify our name, which could result in costs, delays and loss of market recognition.

The COVID-19 pandemic could have an adverse effect on our business.

The current COVID-19 pandemic has materially impacted the global economy and commodity and financial markets. The full extent and impact of the COVID-19 pandemic is unknown and to date has included, among other things, extreme volatility in financial markets, a slowdown in economic activity, volatility in commodity prices, strained supply chains, and an increased possibility of a global recession. The response to COVID-19 has led to significant restrictions on travel, temporary business closures, quarantines, global stock market volatility and a general reduction in consumer activity and sentiment, globally. The outbreak has affected our business and operations and may continue to do so by, among others, increasing the cost of operations and reducing employee productivity, limiting travel of our personnel, adversely affecting the health and welfare of our personnel, or preventing or delaying important third-party service providers from performing normal and contracted activities crucial to the operation of our business.

The outbreak has resulted in significant governmental measures being implemented to control the spread of the virus, including, among others, restrictions on manufacturing and the movement of employees in many regions of the U.S. and other countries. These disruptions could continue to impact the market for minerals, which in turn could impact our business or business prospects.

Decisions beyond our control, such as canceled events, restricted travel, barriers to entry, temporary closures or limited availability of county, state or federal government agencies, or other factors, may affect our ability to perform collecting operations, corporate activities, and other actions that would normally be accomplished without such limitations. For instance, the final exploitation regulations were expected to be adopted by the ISA during 2020 but were delayed due to COVID-19. The extent to which the COVID-19 outbreak will further impact our operations, our business and the economy is highly uncertain. We cannot predict the impact of the COVID-19 pandemic, but it may materially and adversely affect our business, financial condition and results of operations.

Public Company Risks and Risks Related to our Securities

We may issue additional common shares or other equity securities without shareholder approval, which would dilute your ownership interests and may depress the market price of our common shares.

As at April 4, 2022, we had 226,780,843 common shares and 24,500,000 warrants to acquire common shares issued and outstanding. In addition, the Allseas Warrant is exercisable for up to 11,600,000 common shares subject to the terms and conditions thereof. Subject to the requirements of the Business Corporations Act (British Columbia) (“BCBCA”), our Articles authorize us to issue common shares and rights relating to our common shares for the consideration and on the terms and conditions established by our board of directors in its sole discretion, whether in connection with acquisitions or otherwise. In addition, 33,699,685 common shares are reserved for issuance under the TMC Incentive Equity Plan, including 9,017,299 shares added to the plan in January 2022 pursuant to the plan’s evergreen provision, subject to adjustment in certain events. In addition, up to 136,239,964 common shares, subject to adjustment in certain events, may be issued to the holders of special shares and holders of options underlying special shares upon conversion of special shares if certain common share price thresholds are met (“Special Shares”). Any common shares issued, including in connection with the exercise of warrants, upon conversion of the Special Shares or under the TMC Incentive Equity Plan, or other equity incentive plans that we may adopt in the future, would dilute the percentage ownership held by you.

Our issuance of additional common shares or other equity securities of equal or senior rank would have the following effects:

- our existing shareholders’ proportionate ownership interest in the Company will decrease;
- the amount of cash available per share, including for payment of dividends in the future, may decrease;
- the relative voting strength of each previously outstanding common share may be diminished; and
- the market price of our common shares may decline.

Our outstanding warrants have become exercisable for our common shares beginning on October 9, 2021, which if exercised, will increase the number of shares eligible for future resale in the public market and result in dilution to our shareholders.

We have 15,000,000 outstanding Public Warrants to purchase 15,000,000 common shares at an exercise price of \$11.50 per share, which warrants became exercisable beginning on October 9, 2021. In addition, there are 9,500,000 Private Warrants outstanding exercisable for 9,500,000 common shares at an exercise price of \$11.50 per share. In certain circumstances, the Public Warrants and Private Warrants may be exercised on a cashless basis. To the extent such warrants are exercised, additional common shares will be issued, which will result in dilution to the holders of our common shares and increase the number of shares eligible for resale in the public market. Sales of substantial numbers of such shares in the public market could adversely affect the market price of our common shares, the impact of which is increased as the value of our stock price increases.

We have identified material weaknesses in our internal control over financial reporting. If we are unable to develop and maintain an effective system of internal control over financial reporting, we may not be able to accurately report our financial results in a timely manner, which may adversely affect investor confidence in us and materially and adversely affect our business and operating results and the value of our common shares.

In connection with the preparation of DeepGreen’s financial statement for the years ended December 31, 2020 and 2019 and three months ended March 31, 2021 that were included in the proxy statement/prospectus filed with the SEC on August 13, 2021, as well as the financial statements for the six months ended June 30, 2021 that were included in the Current Report on Form 8-K, as amended, filed with the SEC on September 15, 2021, we identified a material weakness in our internal control over financial reporting as of December 31, 2020, March 31, 2021 and June 30, 2021 which related to deficiencies in the design and operation of the financial statement close and reporting controls, including maintaining sufficient written policies and procedures and the need to use appropriate technical expertise when accounting for complex or non-routine transactions. In the process of preparing the Company’s third quarter 2021 financial statements, management discovered misstatements related to the understatement of exploration expense and overstatement of stock option expenses related to the three-month period ended March 31, 2021 and six-month period ended June 30, 2021. For further detail regarding the restatement, see Part II, Item 2 “Management’s Discussion and Analysis of Financial Condition and Results of Operations - Restatement of Previously Issued Quarterly Financial Statements” and Part II, Item 4 “Controls and Procedures” included in the Quarterly Report on Form 10-Q filed on November 15, 2021. These misstatements resulted in the Company having to restate its unaudited condensed consolidated financial statements for the three months ended March 31, 2021 and six months ended June 30, 2021. Our management has concluded that this material weakness was due to the fact that, prior to the Business Combination, we were a private company with limited resources. We have taken the following remediation measures to date:

- appointed a Chief Financial Officer and Chief Accounting Officer to oversee the finance and accounting function;
- hired individuals for the core accounting function with the requisite education, designation, and technical accounting and public company experience;
- until we have the full complement of accounting staff in place, we are utilizing experienced and competent contract accountants to supplement our internal accounting team;
- developed a plan to bring our finance and accounting function in-house and are nearing completion of the transition from our outsourced accounting service provider;
- evaluated the accounting impacts of all new contracts and arrangements through a detailed analysis against accounting standards and technical interpretations;
- performed a thorough analysis of key issues to be addressed, have prioritized these issues and we are now in the process of addressing these issues;
- began a project to design and implement robust controls over all our key processes and address all key company risks; and
- started adding formality and rigor to our financial reporting process by continuously developing structured roles, policies, processes, procedures and controls.

In response to the material weaknesses, we have expended, and will continue to expend, a substantial amount of effort and resources to improve the internal controls environment, particularly those over financial reporting. Our remediation plan can only be accomplished over time and will be continually reviewed to determine that it is achieving its objectives. The material weaknesses will not be considered remediated until sufficient time has elapsed to provide sufficient sample evidence that the newly designed and implemented controls are operating effectively. There is no assurance that these initiatives will ultimately have the intended effects. Although much progress has been achieved with the implementation of the above remediation measures, the material weaknesses were not fully remediated as of December 31, 2021.

If the material weaknesses are not remediated in a timely manner, this could result in material misstatements to our annual or interim financial statements that would not be prevented or detected on a timely basis, or in the delayed filing of required periodic reports. If we are unable to assert that our internal control over financial reporting is effective, or when required in the future, if our independent registered public accounting firm is unable to express an unqualified opinion as to the effectiveness of the internal control over financial reporting, investors may lose confidence in the accuracy and completeness of our financial reports, the market price of our securities could be adversely affected and we could become subject to litigation or investigations by Nasdaq, the SEC, or other regulatory authorities, which could require additional financial and management resources.

We may face litigation and other risks as a result of the material weaknesses in our internal control over financial reporting.

We have restated our financial statements as of and for the three-month period ended March 31, 2021, and as of and for the six-month period ended June 30, 2021 in the unaudited condensed financial statements included in our Quarterly Report on Form 10-Q filed on November 15, 2021 as a result of deficiencies in the design and operation of the financial statement close and reporting controls, including maintaining sufficient written policies and procedures and the need to use appropriate technical expertise when accounting for complex or non-routine transactions.

As a result of the material weaknesses, the restatements, the change in accounting for the warrants, the adjustments relating to the accrual of exploration expenses and stock option accounting, and other matters raised or that may in the future be raised by the SEC, we may be subject to potential litigation or other disputes which may include, among others, claims invoking the federal and state securities laws, contractual claims or other claims arising from the Restatement and material weaknesses in our internal control over financial reporting and the preparation of our financial statements. We can provide no assurance that such litigation or dispute will not arise in the future. Any such litigation or dispute, whether successful or not, could have a material adverse effect on our business, results of operations and financial condition.

We are involved in litigation that may adversely affect us, and may not be successful in our litigation related to non-performing Private Investment in Public Equity (“PIPE”) investors.

Due to the nature of our business, we may be subject to regulatory investigations, claims, lawsuits and other proceedings in the ordinary course of our business. The results of these legal proceedings cannot be predicted with certainty due to the uncertainty inherent in litigation, including the effects of discovery of new evidence or advancement of new legal theories, the difficulty of predicting decisions of judges and juries and the possibility that decisions may be reversed on appeal. We can provide no assurances that these matters will not have a material adverse effect on our business. Following periods of volatility in the market, securities class-action litigation has often been instituted against companies. On October 28, 2021, a shareholder filed a putative class action against us and certain executives alleging that all defendants violated Section 10(b) of the Exchange Act and Rule 10b-5 promulgated thereunder, and certain defendants violated Section 20(a) of the Exchange Act by making false and/or misleading statements and/or failing to disclose information about our operations and prospects during the period from March 4, 2021 and October 5, 2021. See “Legal Proceedings” of this prospectus for additional information about this lawsuit. Although we deny any allegations of wrongdoing and intend to vigorously defend against this lawsuit, there is no assurance that we or the other defendants will be successful in our defense of this lawsuit or that insurance will be available or adequate to fund any settlement or judgment or the litigation costs of this action. A resolution of this lawsuit adverse to us or the other defendants, however, could have a material effect on our financial position and results of operations in the period in which the lawsuit is resolved. Additionally, this and other litigation, if instituted against us, could result in substantial costs and diversion of management’s attention and resources, which could materially and adversely affect our business, financial condition, results of operations and growth prospects.

We expected to receive approximately \$330 million of proceeds in the private placement that closed on September 9, 2021 in connection with the Closing (the “PIPE Financing”) but only received \$110.3 million (net of transactions costs) due to two investors that failed to fulfill their funding obligations under their subscription agreements with us with respect to the PIPE Financing. We have initiated litigation against the two non-performing investors in order to enforce the funding obligations. There can be no assurances, however, that we will be successful in our efforts against these investors.

There can be no assurance that the Public Warrants and Private Warrants will be in the money at the time they become exercisable, and they may expire worthless.

The exercise price for the outstanding Public Warrants and Private Warrants is \$11.50 per common share. There can be no assurance that such warrants will be in the money following the time they become exercisable and prior to their expiration, and as such, such warrants may expire worthless.

There are currently outstanding an aggregate of 24,500,000 warrants to acquire our common shares (not including the Allseas Warrant), which comprise 9,500,000 Private Warrants initially issued in connection with SOAC's initial public offering, which were transferred to permitted transferees of the initial holders thereof, and 15,000,000 Public Warrants. Each of our outstanding whole warrants is exercisable commencing on October 9, 2021, for one common share in accordance with its terms. Therefore, as of December 31, 2021, if we assume that each outstanding whole warrant is exercised and one common share is issued as a result of such exercise, with payment of the exercise price of \$11.50 per share, our fully-diluted share capital would increase by a total of 24,500,000 shares, with approximately \$281.8 million paid to us to exercise the warrants.

We are an emerging growth company and a smaller reporting company within the meaning of the Securities Act, and if we take advantage of certain exemptions from disclosure requirements available to "emerging growth companies" or "smaller reporting companies," this could make our securities less attractive to investors and may make it more difficult to compare our performance with other public companies.

We are an "emerging growth company" within the meaning of the Securities Act, as modified by the JOBS Act, and we may take advantage of certain exemptions from various reporting requirements that are applicable to other public companies that are not "emerging growth companies" including, but not limited to, not being required to comply with the auditor attestation requirements of Section 404 of the Sarbanes-Oxley Act, reduced disclosure obligations regarding executive compensation in our periodic reports and proxy statements, and exemptions from the requirements of holding a nonbinding advisory vote on executive compensation and shareholder approval of any golden parachute payments not previously approved. As a result, our shareholders may not have access to certain information they may deem important. We could be an emerging growth company for up to five years, although circumstances could cause us to lose that status earlier, including if the market value of our common shares held by non-affiliates exceeds \$700 million as of the end of any second quarter of a fiscal year, in which case we would no longer be an emerging growth company as of the last day of such fiscal year. We cannot predict whether investors will find our securities less attractive because we will rely on these exemptions. If some investors find our securities less attractive as a result of our reliance on these exemptions, the trading prices of our securities may be lower than they otherwise would be, there may be a less active trading market for our securities and the trading prices of our securities may be more volatile.

Further, Section 102(b)(1) of the JOBS Act exempts emerging growth companies from being required to comply with new or revised financial accounting standards until private companies (that is, those that have not had a registration statement under the Securities Act declared effective or do not have a class of securities registered under the Exchange Act) are required to comply with the new or revised financial accounting standards. The JOBS Act provides that a company can elect to opt out of the extended transition period and comply with the requirements that apply to non-emerging growth companies but any such election to opt out is irrevocable. We have elected not to opt out of such extended transition period, which means that when a standard is issued or revised and it has different application dates for public or private companies, we, as an emerging growth company, can adopt the new or revised standard at the time private companies adopt the new or revised standard. This may make comparison of our financial statements with another public company that is not an emerging growth company or is an emerging growth company which has opted out of using the extended transition period difficult or impossible because of the potential differences in accounting standards used.

Additionally, we are a "smaller reporting company" as defined in Item 10(f)(1) of Regulation S-K. Smaller reporting companies may take advantage of certain reduced disclosure obligations, including, among other things, providing only two years of audited financial statements. We will remain a smaller reporting company until the last day of the fiscal year in which (i) the market value of our common shares held by non-affiliates is greater than or equal to \$250 million as of the end of that fiscal year's second fiscal quarter, and (ii) our annual revenues are greater than or equal to \$100 million during the last completed fiscal year and the market value of our common shares held by non-affiliates exceeds \$700 million as of the end of that fiscal year's second fiscal quarter. To the extent we take advantage of such reduced disclosure obligations, it may also make comparison of our financial statements with other public companies difficult or impossible.

Our business is capital intensive, and we may be required to raise additional funds in the future in order to accomplish our objectives.

The continuing exploration and development of the NORI, TOML and Marawa contract areas may depend upon our ability to obtain dilutive and/or non-dilutive financing through debt financing, equity financing, joint ventures, or other means. Additionally, the actual amount of capital raised for our projects may vary materially from our current estimates, which could require that we raise additional funds. There is no assurance that we will be successful in obtaining the required financing for these or other purposes, including for general working capital, or that any funds raised will be sufficient for the purposes contemplated. We will not initially have any producing properties and will have no source of significant operating cash flow until 2024 at the earliest. There is no precedent for projects like ours, and therefore, debt financing may not be available in commercially available terms, or at all. Failure to obtain additional financing on a timely basis could cause us to reduce or terminate our operations. There can be no certainty that capital will be available to us on acceptable terms.

If additional funds are raised through further issuances of equity or convertible debt securities, existing shareholders could suffer significant dilution, and any new equity securities issued could have rights, preferences and privileges superior to those they possess prior to such issuances. Any debt financing secured in the future could involve restrictive covenants relating to capital raising activities and other financial and operational matters, which may make it more difficult for us to obtain additional capital and to pursue business opportunities, including potential acquisitions.

We may incur debt in the future, and our ability to satisfy our obligations thereunder remains subject to a variety of factors, many of which are not within our control.

We may seek to incur debt in the future in order to fund our exploration and operational programs, which would reduce our financial flexibility and could have a material adverse effect on our business, financial condition or results of operation.

Should we incur debt, our ability to satisfy any resulting debt obligations and to reduce our level of indebtedness will depend on future performance. General economic conditions, mineral prices, and financial, business and other factors will have an impact on our operations and future performance, and many of these factors are beyond our control. As such, we cannot assure investors that we will be able to generate sufficient cash flow to pay the interest on any debt, or that future working capital, borrowings, or equity financing will be available to pay or refinance such debt or meet future debt covenants. Factors that will affect our ability to raise cash through an offering of securities or a refinancing of any debt include financial market conditions, the value of our assets, and our performance at the time we are seeking to raise capital. We cannot assure investors that we will have sufficient funds to make such payments. If we do not have sufficient funds and are otherwise unable to negotiate renewals of our current borrowings or to arrange for new financing, we might be required to take measures to generate liquidity, such as selling some or all of our assets. Any such sales could have a material adverse effect on our business, operations and financial results. Moreover, failure to obtain additional financing, if required, on a timely basis, could cause us to reduce or delay our proposed operations.

We may need to raise additional capital in order to complete our programs and commence commercial operations and there is no assurance that we will be able to obtain adequate financing in the future or that such financing will be available to us on advantageous terms.

An active trading market for our common shares and warrants may not be sustained, which would adversely affect the liquidity and price of our securities.

An active trading market for our securities may not be sustained. In addition, the price of our securities could fluctuate significantly for various reasons, many of which are outside our control, such as our stock performance, large purchases or sales of our common shares, legislative changes and general economic, political or regulatory conditions. The release of our financial results may also cause our share price to vary. The continued existence of an active trading market for our securities will depend to a significant extent on our ability to continue to meet Nasdaq's listing requirements, which we may be unable to accomplish.

There can be no assurance that we will be able to comply with the continued listing standards of Nasdaq.

On September 10, 2021, our common shares and Public Warrants began trading on Nasdaq under the symbols “TMC” and “TMCWW,” respectively. If in the future Nasdaq delists our common shares from trading on its exchange for failure to meet the listing standards, we and our securityholders could face significant material adverse consequences including:

- a limited availability of market quotations for our securities;
- reduced liquidity for our securities;
- a determination that our common shares are “penny stock” which will require brokers trading in our common shares to adhere to more stringent rules and possibly result in a reduced level of trading activity in the secondary trading market for our securities;
- a limited amount of news and analyst coverage; and
- a decreased ability to issue additional securities or obtain additional financing in the future.

The market price of our securities may be volatile, which could cause the value of your investment to decline.

The market price of our securities may be highly volatile and could be subject to wide fluctuations. In addition, the trading volume in our common shares and Public Warrants may fluctuate and cause significant price variations to occur. Securities markets worldwide experience significant price and volume fluctuations. This market volatility, as well as general economic, market and political conditions (including as a result of the COVID-19 pandemic), could reduce the market price of our securities in spite of our operating performance. If we are unable to operate as profitably as investors expect, the market price of our common shares will likely decline when it becomes apparent that the market expectations may not be realized. In addition, our results of operations could be below the expectations of public market analysts and investors due to a number of potential factors, including variations in our quarterly or annual results of operations, operating results of other companies in the same industry, additions or departures of key management personnel, changes in our earnings estimates (if provided) or failure to meet analysts’ earnings estimates, publication of research reports about our industry, litigation and government investigations, changes or proposed changes in laws or regulations or differing interpretations or enforcement thereof affecting our business, adverse market reaction to any indebtedness we may incur or securities it may issue in the future, changes in market valuations of similar companies or speculation in the press or the investment community with respect to us or our industry, negative media coverage, adverse announcements by us or others and developments affecting us, announcements by our competitors of significant contracts, acquisitions, dispositions, strategic partnerships, joint ventures or capital commitments, actions by institutional shareholders, the possible effects of war, terrorism and other hostilities, adverse weather conditions, changes in general conditions in the economy or the financial markets or other developments affecting the industry in which we operate, and increases in market interest rates that may lead investors in our common shares to demand a higher yield, and in response the market price of our common shares could decrease significantly.

These broad market and industry factors may decrease the market price of our common shares, regardless of our actual operating performance. The stock market in general has, from time to time, experienced extreme price and volume fluctuations. In addition, in the past, following periods of volatility in the overall market and the market price of a company’s securities, securities class action litigation has often been instituted against these companies. Such litigation, if instituted against us, could result in substantial costs, a material negative impact on our liquidity and a diversion of our management’s attention and resources.

There may be sales of a substantial amount of our common shares after the Business Combination by former SOAC shareholders and/or former legacy DeepGreen shareholders, and these sales could cause the price of our securities to fall.

As at December 31, 2021, we had 225,432,493 common shares and 24,500,000 Warrants to acquire common shares issued and outstanding. In addition, the Allseas Warrant is exercisable for up to 11,600,000 Common Shares subject to the terms and conditions thereof. All of our public shares are freely transferable (subject to any contractual lock-up agreements), except for common shares issued in connection with the PIPE and any shares held by our and legacy DeepGreen's "affiliates," as that term is defined in Rule 144 under the Securities Act. Our common shares issued to Sustainable Opportunities Holdings LLC ("Sponsor") now held by its permitted transferees and the independent directors of SOAC in exchange for their founder shares are subject to certain contractual lock-up agreements. In addition, the initial 180-day lock-up period following the close of the Business Combination recently expired allowing additional shares to become eligible to be sold in the public market. Further, up to 77,277,244 common shares may be issued to the holders upon conversion of the Special Shares if certain price thresholds are met and such common shares could be sold in the public market. Sales of substantial amounts of our common shares in the public market, or the perception that such sales will occur, could adversely affect the market price of our common shares.

We may redeem your unexpired warrants prior to their exercise at a time that is disadvantageous to you, thereby making your warrants worthless.

We have the ability to redeem outstanding warrants at any time after they become exercisable and prior to their expiration, at a price of \$0.01 per warrant, provided that the closing price of our common shares equals or exceeds \$18.00 per share (as adjusted for share subdivisions, share capitalizations, reorganizations, recapitalizations and the like) for any 20 trading days within a 30-trading day period ending on the third trading day prior to proper notice of such redemption and provided that certain other conditions are met. If and when the warrants become redeemable by us, we may exercise our redemption right even if we are unable to register or qualify the underlying securities for sale under all applicable state securities laws. Redemption of the outstanding warrants could force you to (i) exercise your warrants and pay the exercise price therefor at a time when it may be disadvantageous for you to do so, (ii) sell your warrants at the then-current market price when you might otherwise wish to hold your warrants or (iii) accept the nominal redemption price which, at the time the outstanding warrants are called for redemption, is likely to be substantially less than the market value of your warrants. None of the private placement warrants will be redeemable by us on such terms so long as they are held by permitted transferees.

Reports published by analysts, including projections in those reports that differ from our actual results, could adversely affect the price and trading volume of our common shares.

Securities research analysts may establish and publish their own periodic projections for us. These projections may vary widely and may not accurately predict the results we actually achieve. Our common share price may decline if our actual results do not match the projections of these securities research analysts. Similarly, if one or more of the analysts who write reports on us downgrades our shares or publishes inaccurate or unfavorable research about our business, our share price could decline. If one or more of these analysts ceases coverage of us or fails to publish reports on us regularly, our share price or trading volume could decline. While we expect research analyst coverage, if no analysts commence coverage of us, the market price and volume for our common shares could be adversely affected.

As we are not a reporting issuer in Canada, our common shares and Special Shares may be subject to restrictions on resale in Canada.

Our common shares and Special Shares were distributed pursuant to an exemption from the prospectus requirements in Canada. As we are not a reporting issuer in Canada and we do not intend to become a reporting issuer in Canada in the future, any distributions or trades of our securities will be a distribution that is subject to the prospectus requirements in Canada unless an exemption therefrom is available. An exemption from the prospectus requirements would be available to holders of shares of a class (and any underlying shares of such class) in respect of a trade if residents of Canada (the “Canadian Owners”) own, directly or indirectly, not more than 10% of the outstanding shares of such class or any underlying shares of such class, and represent in number not more than 10% of the total number of owners, directly or indirectly, of shares of the applicable class or underlying shares, on any distribution date (collectively, the “Ownership Cap”) and the trade is made through an exchange or market outside of Canada or to a person or company outside of Canada. On September 7, 2021, we received exemptive relief from the prospectus requirements in Canada such that the common shares and Special Shares issued to Canadian Owners in connection with the Business Combination are not subject to resale restrictions in Canada, subject to the terms and conditions set forth in the exemptive relief order. There can be no assurance that any future securities offered to offerings held by Canadian Owners will be freely transferable by the Canadian Owners.

We are exposed to risks in our international operations, which could adversely affect our business.

We are exposed to foreign currency risk in connection with the business we conduct in foreign currencies to the extent that the exchange rates of the foreign currencies are subject to adverse change over time. It has not been our practice to enter into foreign exchange contracts to protect against adverse foreign currency fluctuations, and we cannot predict whether exchange rate fluctuations will significantly harm our operations or financial results in the future. In addition to adverse fluctuations in foreign currency exchange rates, we are exposed to further risks inherent in doing business abroad, including limitations on asset transfers, changes in foreign regulations and political turmoil, all of which could adversely affect us.

We may be classified as a passive foreign investment company, or PFIC, in any taxable year, which could result in adverse U.S. federal income tax consequences to U.S. Holders.

If we are classified as a PFIC, such status may have adverse U.S. federal income tax consequences to U.S. Holders (as defined in the section titled “*Material U.S. Federal Income Tax Considerations*”). The tests for determining PFIC status for a taxable year depend upon the relative values of certain categories of assets and the relative amounts of certain kinds of income. The determination of whether we are a PFIC depends on the particular facts and circumstances (such as the valuation of our assets, including goodwill and other intangible assets) and may also be affected by the application of the PFIC rules, which are subject to differing interpretations. Based on our initial assessment, we do not believe that we were classified as a PFIC for U.S. federal income tax purposes for the taxable year ending December 31, 2021. However, the application of the PFIC rules is subject to uncertainty in several respects, and we cannot assure you that the U.S. Internal Revenue Service will not take a contrary position. Furthermore, whether we are classified as a PFIC is a factual determination that must be made annually after the close of each taxable year. Accordingly, there can be no assurance with respect to our PFIC status for the current year or any future taxable year. If we are a PFIC for any taxable year during which a U.S. holder holds our common shares or Public Warrants, certain adverse U.S. federal income tax consequences could apply to such U.S. holder and such holders may be subject to additional reporting requirements. See “*Material U.S. Federal Income Tax Considerations — Tax Consequences of Ownership and Disposition of Common Shares and Public Warrants — Passive Foreign Investment Company Rules*” for a more detailed discussion with respect to our PFIC status and the application of the PFIC rules. U.S. Holders of our Common Shares and Public Warrants are urged to consult their tax advisors regarding the application of the PFIC rules to them.

Canadian law and our Notice and Articles contain certain provisions, including anti-takeover provisions that limit the ability of shareholders to take certain actions and could delay or discourage takeover attempts that shareholders may consider favorable.

Provisions in our Notice of Articles and Articles, as well as certain provisions under the BCBCA and applicable Canadian laws, may discourage, delay or prevent a merger, acquisition or other change in control of TMC that shareholders may consider favorable, including transactions in which they might otherwise receive a premium for their common shares.

For instance, our Notice of Articles and Articles contain provisions that establish certain advance notice procedures for nomination of candidates for election as directors at shareholders’ meetings.

Limitations on the ability to acquire and hold common shares may also be imposed by the *Competition Act* (Canada). This legislation permits the Commissioner of Competition, or Commissioner, to review any acquisition or establishment, directly or indirectly, including through the acquisition of shares, of control over or of a significant interest in TMC. Moreover, a non-Canadian must file an application for review with the Minister responsible for the *Investment Canada Act* and obtain approval of the Minister prior to acquiring control of a “Canadian business” within the meaning of the *Investment Canada Act*, where prescribed financial thresholds are exceeded.

Further, changes to critical minerals policies and regulations in Canada and the U.S. and elsewhere may impact our ability to conduct our businesses internationally, including processing and sales of minerals and metals, and the ability to negotiate or agree any merger, acquisition or change of control.

Our Notice of Articles and Articles will provide that any derivative actions, actions relating to breach of fiduciary duties and other matters relating to our internal affairs will be required to be litigated in the Province of British Columbia, Canada, and will contain an exclusive federal forum provision for certain claims under the Securities Act, which could limit your ability to obtain a favorable judicial forum for disputes with us.

Our Notice of Articles and Articles include a forum selection provision that provides that, unless we consent in writing to the selection of an alternative forum, the Supreme Court of British Columbia, Canada and the appellate courts therefrom, will be the sole and exclusive forum for (i) any derivative action or proceeding brought on our behalf; (ii) any action or proceeding asserting a claim of breach of a fiduciary duty owed by any of our directors, officers, or other employees to us; (iii) any action or proceeding asserting a claim arising pursuant to any provision of the BCBCA or TMC Notice of Articles and Articles (as either may be amended from time to time); or (iv) any action or proceeding asserting a claim otherwise related to the relationships among us, our affiliates and their respective shareholders, directors and/or officers, but excluding claims related to our business or of such affiliates. The forum selection provision also provides that our securityholders are deemed to have consented to personal jurisdiction in the Province of British Columbia and to service of process on their counsel in any foreign action initiated in violation of the foregoing provisions. The forum selection provision may impose additional litigation costs on securityholders in pursuing any such claims. This provision will not apply to suits brought to enforce any duty or liability created by the Securities Act or the Exchange Act, or the rules and regulations thereunder.

Section 22 of the Securities Act creates concurrent jurisdiction for federal and state courts over all claim brought to enforce any duty or liability created by the Securities Act or the rules and regulations thereunder and our Notice and Articles will provide that the federal district courts of the U.S. will, to the fullest extent permitted by law, be the sole and exclusive forum for resolving any complaint asserting a cause of action arising under the Securities Act (the “Federal Forum Provision”). Application of the Federal Forum Provision means that suits brought by our securityholders to enforce any duty or liability created by the Securities Act must be brought in federal court and cannot be brought in any state court.

Section 27 of the Exchange Act creates exclusive federal jurisdiction over all claims brought to enforce any duty or liability created by the Exchange Act or the rules and regulations thereunder. Accordingly, actions by our shareholders to enforce any duty or liability created by the Exchange Act or the rules and regulations thereunder must be brought in federal court. Our shareholders will not be deemed to have waived our compliance with the federal securities laws and the regulations promulgated thereunder.

Any person or entity purchasing or otherwise acquiring or holding any interest in any of our securities shall be deemed to have notice of and consented to the aforementioned forum selection provisions, including the Federal Forum Provision. Additionally, our securityholders cannot waive compliance with the federal securities laws and the rules and regulations thereunder. These provisions may limit our securityholders’ ability to bring a claim in a judicial forum they find favorable for disputes with us or our directors, officers, or other employees, which may discourage lawsuits against us and our directors, officers, and other employees. Alternatively, if a court were to find the choice of forum provision contained in our Notice and Articles to be inapplicable or unenforceable in an action, we may incur additional costs associated with resolving such action in other jurisdictions, which could harm our business, operating results and financial condition.

Our Notice and Articles will permit us to issue an unlimited number of common shares and preferred shares without seeking approval of the holders of our common shares.

Our Notice of Articles and Articles will permit us to issue an unlimited number of common shares. Subject to the requirements of the BCBCA and applicable securities exchange, we will not be required to obtain the approval of shareholders for the issuance of additional common shares. Any further issuances of common shares will result in immediate dilution to existing shareholders and may have an adverse effect on the value of their shareholdings.

The TMC Notice of Articles and Articles will also permit us to issue an unlimited number of preferred shares, issuable in series and, subject to the requirements of the BCBCA, having such designations, rights, privileges, restrictions and conditions, including dividend and voting rights, as our board of directors may determine, and which may be superior to those of the common shares. The issuance of preferred shares could, among other things, have the effect of delaying, deferring or preventing a change in control and might adversely affect the market price of the common shares. Subject to the provisions of the BCBCA and the Nasdaq, we will not be required to obtain the approval of the holders of common shares for the issuance of preferred shares or to determine the maximum number of shares of each series of preferred shares, create an identifying name for each series and attach such special rights or restrictions as our board of directors may determine. See “*Description of TMC Securities – Authorized Shares Capital – Preferred Shares.*”

As a company incorporated in British Columbia with some of our directors and officers residing outside of the U.S., it may be difficult for investors in the U.S. to enforce civil liabilities against us based solely upon the federal securities laws of the U.S.

We are incorporated under the laws of British Columbia with our registered office located in British Columbia, Canada. Many of our directors and officers reside outside of the U.S. and all or a substantial portion of our assets and those of such persons are located outside the U.S. Consequently, it may be difficult for U.S. investors to effect service of process within the U.S. upon us or our directors or officers who are not residents of the U.S., or to realize in the U.S. upon judgments of courts of the U.S. predicated upon civil liabilities under the Securities Act. Investors should not assume that Canadian courts: (i) would enforce judgments of U.S. courts obtained in actions against us or such persons predicated upon the civil liability provisions of the U.S. federal securities laws or the securities or blue-sky laws of any state within the U.S. or (ii) would enforce, in original actions, liabilities against us or such persons predicated upon the U.S. federal securities laws or any such state securities or blue-sky laws.

USE OF PROCEEDS

All of the Common Shares and Warrants offered by the Selling Securityholders pursuant to this prospectus will be sold by the Selling Securityholders for their respective accounts. We will not receive any of the proceeds from these sales.

We will receive up to an aggregate of approximately \$281,750,000 from the exercise of the Warrants, assuming the exercise in full of all of the Warrants for cash. We expect to use the net proceeds from the exercise of the Warrants for general corporate purposes. We will have broad discretion over the use of proceeds from the exercise of the Warrants. There is no assurance that the holders of the Warrants will elect to exercise any or all of such Warrants. To the extent that the Warrants are exercised on a “cashless basis,” the amount of cash we would receive from the exercise of the Warrants will decrease.

DETERMINATION OF OFFERING PRICE

The offering price of the Common Shares underlying the Warrants offered hereby is determined by reference to the exercise price of the Warrants of \$11.50 per share. The Public Warrants are listed on Nasdaq under the symbol “TMCWW.”

We cannot currently determine the price or prices at which Common Shares or Warrants may be sold by the Selling Securityholders under this prospectus.

MARKET PRICE, TICKER SYMBOL AND DIVIDEND INFORMATION

Market Price and Ticker Symbol

Our Common Shares and Public Warrants began trading on The Nasdaq Global Select Market on September 10, 2021 under the symbols “TMC” and “TMCWW,” respectively. Prior to September 10, 2021 and before the completion of the Business Combination, the units, public shares and public warrants of Sustainable Opportunities Acquisition Corp. traded on the New York Stock Exchange under the under the symbols “SOAC.U,” “SOAC” and “SOAC WS,” respectively.

The closing price of the Common Shares and Public Warrants on April 12, 2022, was \$2.00 and \$0.41, respectively.

Holders

As of March 22, 2022, there were approximately 226,780,843 Common Shares issued and outstanding held of record by 119 holders, approximately 15,000,000 Public Warrants held of record by one holder and 9,500,000 private placement warrants issued in connection with SOAC’s initial public offering held of record by 32 holders, each exercisable for one Common Share at a price of \$11.50 per share.

Such numbers do not include beneficial owners holding our securities through nominee names.

Dividend Policy

We have not paid any cash dividends on our capital stock to date. The payment of cash dividends in the future will be dependent upon our revenues and earnings, if any, capital requirements and general financial condition. The payment of any cash dividends will be within the discretion of the board of directors at such time.

BUSINESS OF TMC

The following discussion reflects the business of TMC, as currently embodied by TMC. In this section, “we,” “us” and “our” generally refer to TMC in the present tense or TMC from and after the Business Combination.

Overview

We are a deep-sea minerals exploration company focused on the collection, processing and refining of polymetallic nodules found on the seafloor in international waters of the Clarion Clipperton Zone (“CCZ”), about 1,300 nautical miles south-west of San Diego, California. The CCZ is a geological submarine fracture zone of abyssal plains and other formations in the Eastern Pacific Ocean, with a length of around 7,240 km (4,500 miles) that spans approximately 4,500,000 square kilometers (1,700,000 sq mi). Polymetallic nodules are discrete rocks that sit unattached to the seafloor, occur in significant quantities in the CCZ and have high concentrations of nickel, manganese, cobalt and copper in a single rock.

These four metals contained in the polymetallic nodules are critical for the transition to clean energy. Our resource definition work to date shows that nodules in our contract areas represent the world’s largest estimated undeveloped source of critical battery metals. If we are able to collect polymetallic nodules from the seafloor on a commercial scale, we plan to use such nodules to produce three types of metal products: (i) feedstock for battery cathode precursors (nickel and cobalt sulfates) for electric vehicles (“EV”) and renewable energy storage markets, (ii) copper cathode for EV wiring, clean energy transmission and other applications, and (iii) manganese silicate for manganese alloy production required for steel production. Our mission is to build a carefully managed, shared stock of metal that can be used, recovered and reused for generations to come. Significant quantities of newly mined metal are required because existing metal stocks are insufficient to meet rapidly rising demand.

Exploration and exploitation of seabed minerals in international waters is regulated by the International Seabed Authority (“ISA”), an intergovernmental organization established pursuant to the 1994 Agreement Relating to the Implementation of the United Nations Convention on the Law of the Sea (“UNCLOS”). The ISA grants contracts to sovereign states or to private contractors who are sponsored by a sovereign state. The ISA requires that a contractor must obtain and maintain sponsorship by a host nation that is a member of the ISA and signatory to UNCLOS and such nation must maintain effective supervision and regulatory control over such sponsored contractor. The ISA has issued a total of 19 polymetallic nodule exploration contracts covering approximately 1.28 million km², or 0.4% of the global seafloor, 17 of which are in the CCZ. We hold exclusive exploration and commercial rights to three of the 17 polymetallic nodule contract areas in the CCZ through our subsidiaries Nauru Ocean Resources Inc. (“NORI”) and Tonga Offshore Mining Limited (“TOML”), sponsored by the Republic of Nauru (“Nauru”) and the Kingdom of Tonga (“Tonga”), respectively, and exclusive commercial rights through our subsidiary, DeepGreen Engineering Pte. Ltd.’s (“DGE”), arrangement with Marawa Research and Exploration Limited (“Marawa”), a company owned and sponsored by the Republic of Kiribati (“Kiribati”).

We are still in the exploration phase and have not yet obtained any exploitation contracts from the ISA to commence commercial scale polymetallic nodule collection in the CCZ nor have we obtained the applicable environmental permits and other permits required to build and operate commercial scale polymetallic nodule processing and refining plants on land.

Polymetallic Nodules

Deep-sea polymetallic nodules form on or just below the sediment-covered seafloor of the abyssal plains. These nodules contain significant amounts of metals, and their unique characteristic compared to terrestrial deposits is the presence of four critical metals in one deposit.

Additionally, polymetallic nodules in the CCZ possess the following characteristics:

Characteristic	What it means
Far removed from human communities	No need for social displacement
No vegetation or other obstructions covering access to nodules	No need to remove overburden, no rock cutting or blasting
Unattached to the seafloor, 90% of nodule mass in the top 5 cm	No need for destructive rock cutting and excavation
High grades of four critical metals in a single ore	Four times less mass to process compared to land ores
Low head-grade variability	Potentially easy to process
2-10 cm diameter	Potentially easy to handle
Microporous	Potentially easy to smelt
Very low concentrations of hazardous elements like arsenic, antimony and mercury	Potential to productize 100% of nodule mass and design a metallurgical flowsheet that generates no tailings and leaves nearly no solid waste streams behind

The above characteristics of polymetallic nodules may provide an opportunity to compress lifecycle environmental and social impacts of producing critical metals as compared to land ores. In order to extract nickel, copper, cobalt and manganese from land ores, at least three different types of ores would need to be excavated. Mine development often involves social displacement and impacts on indigenous people as well as deforestation, destruction of carbon sinks and biodiversity loss. In addition, several times more mass would need to be processed, often requiring significant amounts of local water resources; mining and processing tailings which can be toxic and need to be managed indefinitely in tailings dams, using dry-stacking or a practice known as deep-sea tailings placement (DSTP). Furthermore, metal production from land ores can release several toxic streams into the surrounding environment which can negatively impact the health of local communities and ecosystems. We believe using nodules to produce critical metals can help reduce several of these impacts associated with mining land ores. If our nodules are to be processed and refined in the U.S., we can also compress the current supply chain of 50,000 miles that some materials need to travel before reaching U.S. down to 1,500 miles, while reducing dependency on China which dominates refining for battery metals like nickel and cobalt.

Market Opportunity

A 2021 study by the International Energy Agency shows that the production of clean energy transition minerals could increase by 600% by 2040 to meet the growing demand for clean energy technologies required to keep global warming at 1.5°C. Given the wide range of environmental and social impacts associated with conventional land-based mining, we believe it is important to ensure that these large amounts of critical metals are sourced with the lowest environmental, social, and economic impacts possible. As the global supply of high-grade ore remains limited and metal demand increases, we can expect a larger environmental and social footprint, potential supply shortages and sustained increases in metal prices should land-based ores remain the only viable source of critical metals, or a more aggressive shift to alternative battery chemistries.

Industries which represent an end-use segment that may require all four critical metals contained in nodules are of particular interest to us and represents potential market opportunities. Most notably, nodules contain metals that can be employed as: (i) feedstock for battery cathode precursors (nickel and cobalt sulfates) for EV and renewable energy storage markets, (ii) copper cathode for EV wiring, clean energy transmission and other applications, and (iii) manganese silicate for manganese alloy production required for steel production. See Section – *Competitive Strengths*.

Battery Metals and EV Market Opportunity - Global

We believe there will be significant growth in EV demand, with many countries committing to phasing out cars that burn fossil fuels and many original equipment manufacturers (“OEMs”) devoting significant resources to the electrification of their vehicle offerings. Furthermore, at the UN Climate Change Conference (COP26) October 2021 meeting in Glasgow, Scotland, governments and major automakers signed a declaration to accelerate the transition to 100% zero-emissions cars and vans by committing to that target by 2040 globally and by 2035 in leading markets. We believe this transition to clean energy and EVs will test the limits of the supply of certain metals where EVs require several times more of these metals (such as nickel, cobalt and copper) than cars with internal combustion engines.

Globally, deficits in nickel and copper expected from 2025.

Nickel class 1 supply and demand without greenfield developments

Global refined nickel supply and demand, in Mt ¹

Copper supply and demand without greenfield developments

Battery Metals and EV Market Opportunity - USA

In August 2021, the United States (“U.S.”) government announced a target of 50% EV sales by 2030. The announcement was followed by a ramp-up of industry commitments to build battery cell manufacturing gigafactories, which are capable of producing large amounts of battery capacity through the entire manufacturing process, in the U.S. which when aggregated with existing gigafactory plans would according to Benchmark Minerals Intelligence represent approximately 703GWh of capacity.

In June 2021, the Biden administration’s 100-Day Review of Critical Minerals Supply Chains estimated that fully electrifying U.S. car sales would require 1,273ktpa of Class 1 nickel, 160ktpa of cobalt and 148ktpa of manganese, compared with existing U.S. primary production of 14ktpa of Class 1 nickel, 0.5ktpa of cobalt, and zero primary production of manganese. Across our NORI and TOML contract areas, we have identified 5,555kt of nickel, 813kt of cobalt and 123,920kt of manganese plus 4,709kt of copper, with the potential to take the U.S. from zero or de minimis production of the three namesake elements in the most prominent battery cathode (NMC) to near self-sufficiency or potentially a net export position in each. The opportunity to use seafloor nodule resources to secure battery metal supply lines was recently emphasized in a letter sent to the U.S. Secretary of Defense by 17 retired generals, admirals which echoed similar sentiments to Senator Lisa Murkowski of Alaska who in February 2021 wrote to the U.S. Secretary of Energy, to say that “new and abundant sources of supply, such as polymetallic nodules, offer a pathway to mineral security for the United States.”

Environmental Market Opportunity

All nickel, cobalt, copper and manganese going into EVs today are produced from land-based ores or recycled scrap. Existing metal stocks available for recycling are insufficient to meet current demand. Even with high end-of-life product recycling rates, most of the new demand over the coming decades will have to be met by new mining. We believe the land mining sector is fundamentally challenged — ore grades are falling, production is moving to some of the more biodiverse and conflict-laden regions in the world (such as the Democratic Republic of the Congo, Indonesia, Philippines and South Africa), accessing ore bodies often requires a complete removal of ecosystems situated on and above such orebodies, and removing, breaking or tunneling through significant tonnage of waste rock. Toxic levels of heavy elements often found in land orebodies typically need to be removed, stored, and maintained indefinitely — a real challenge on seismically active and wet tropical islands in countries like Indonesia that is expected to account for most of future growth in nickel supply.

Although as a result of a vigorous campaign by several non-governmental organizations, several participants in the EV supply chain including Volvo, BMW, Volkswagen and Samsung SDI have recently signed a call for a general precautionary moratorium on all forms of deep seabed mining until all other alternative sources are sufficiently explored and research has clearly demonstrated that deep seabed mining activities can be managed in a way that ensures effective protection of the marine environment we believe that battery metal production specifically from deep-sea polymetallic nodules provides an opportunity to significantly compress most lifecycle environmental, social and governance (ESG) impacts associated with conventional metal production from land-based ores.

To quantify comparative ESG footprints of metal production from nodules as compared to conventional land ores, we commissioned several lifecycle assessments (LCAs) looking at the cradle-to-gate impacts of producing nickel, copper, cobalt and manganese products for “1 billion EVs by 2050” scenario. An LCA white paper looking at a comprehensive set of impacts was commissioned by us and co-authored by certain of our executive officers in 2018 and reviewed by subject matter specialists and published on our website in April 2020, an LCA research paper focusing on climate change impacts was peer-reviewed and published in the Elsevier Journal of Cleaner Production in December 2020 and an LCA research paper focusing on solid waste streams was peer-reviewed and was published in the Yale Journal of Industrial Ecology in January 2022. Based on these LCA assessments that we commissioned and certain of our executive officers co-authored, we believe that we are positioned to become one of the lowest ESG footprint metal companies in the industry, offering an expected 70-99% reduction of most lifecycle ESG impacts as outlined in the table below. While most of these reductions are attributable to the unique characteristics of the polymetallic nodule resource as described above, the elimination of solid processing waste streams onshore is due to our investment in a near-zero-waste flowsheet design and low carbon emissions are due to our commitment to locate onshore processing facilities in places with access to renewable power.

Lifecycle Impact Assessment			
Demand scenario: Battery cathode precursor materials and copper for 1 billion electric cars			
Key assumptions: cradle-to-gate production of nickel sulfate, manganese sulfate, cobalt sulfate and copper cathode assuming NMC811 cathode chemistry and 75kWh battery size.			
Supply scenarios: (1) Conventional land ores ("land") and (2) Polymetallic nodules from the Clarion Clipperton Zone ("nodules").			
Change: % impact reduction nodules relative to land ores or land ores relative to nodules			
	Land	Nodules	% change*
Climate change			
GWP – CO ₂ equivalent emissions, Gt	1.47	0.45	-70%
Carbon sinks at risk, Gt	9.30	0.58	-94%
Disrupted carbon sequestration, GT	2.06	0.24	-88%
Resource use			
Ore, Gt	25	6	-75%

Biomass at risk, Mt	568	42	-93%
Biodiversity loss risk	Present	Present	No change
<small>Source: Paulikas et al, "Where Should Metals for the Green Transition Come From? Comparing Environmental, Social and Economic Impacts of Supplying Base Metals From Land Ores and Seafloor Polymetallic Nodules," April 2020 White Paper, https://metals.co/download/237815/; Paulikas et al, "Life cycle climate change impacts of producing battery metals from land ores versus deep-sea polymetallic nodules," <i>Journal of Cleaner Production</i>, 275 (2020) 123822, https://doi.org/10.1016/j.jclepro.2020.123822; Paulikas et al, Deep-sea nodules versus land ores: A comparative systems analysis of mining and processing wastes for battery-metal supply chains, <i>Journal of Industrial Ecology</i>, 13 Jan 2022, https://doi.org/10.1111/jiec.13225 </small>			

Uncertainty around each LCA indicator is discussed at length in the April 2020 white paper, the December 2020 climate change impacts paper and January 2022 waste impacts paper. Land-based estimates were derived from public LCA databases that contain robust data for metals like nickel and copper; estimates for metals like manganese and cobalt where data in public LCA databases was sparse were augmented with more recent data from peer-reviewed research. Nodule-related estimates were based on technical scoping studies for our offshore and onshore production system that formed the basis of the Canadian NI-43-101 compliant preliminary economic assessment for NORI Area D (2019). The indicators with the highest level of uncertainty for both supply scenarios — land ores and nodules — were impacts on biodiversity and the risk of biodiversity loss. This type of data is not captured in public LCA databases and is further complicated by methodological difficulties of comparing marine and terrestrial life.

The CCZ abyssal plains are one of the most common and least populated habitats on the planet, akin to barren deserts on land. The CCZ abyssal seafloor is plant-free, food-poor and dominated by bacterial life forms. It has been studied extensively since the 1960s with over 13,000 papers published on polymetallic nodules in general and over 1,500 on CCZ nodules in particular. Still more research is underway. We, through our subsidiaries, completed 18 campaigns totaling 710 days at sea.

The largest driver of uncertainty is our ability to measure biodiversity itself. Unlike biodiversity, biomass, measured as carbon contained in live organisms per m² of habitat, is easier to measure and compare. We believe that the CCZ is one of lowest biomass places on the planet. Metal production from nodules will reduce biomass at risk by over 90% compared to producing the same amount of metals from conventional land ores. Biodiversity, defined as species richness, however, is much harder to measure. We believe the assessment of biodiversity in the CCZ is similar to measuring biodiversity on land where a large portion of species remains undescribed despite 250 years of taxonomic classification effort.

As a precautionary environmental management and protection measure, the ISA has already set aside 1.97 million km² or 43% of the CCZ as protected areas, or Areas of Particular Environmental Interest (APEIs) aiming to ensure that all types of habitats that could be impacted by exploitation are represented within APEIs. For comparison, only 7.7% of global oceans are protected today and the global targets currently being discussed by certain stakeholders aim to protect 30% of the oceans by 2030. Additional marine impact mitigation measures such as setting aside more areas inside our contract areas and leaving partial nodule cover inside collection areas to aid natural recovery of bacterial and other communities are also being evaluated. We are collaborating with some of the world's leading researchers to conduct environmental baseline and collection impact studies in order to design plans that could mitigate marine impacts of nodule collection through collection system design and adaptive management systems.

It is also worth noting that if the entire CCZ area currently under exploration (1.28 million km²) were to be exploited over a 30-year period, these nodule collection operations would impact 42,500 km² of the abyssal seafloor per year in one of the least productive areas of the ocean (with respect to the abundance of marine life). This is less than 1% of the estimated 4,900,000 km² of the seafloor currently impacted every year by trawling operations that take place primarily in highly productive coastal waters.

As a precaution, 43% of the CCZ is now under protection.

under exploration

Report of the Chair of the Legal and Technical Commission on the work of the Commission at its twenty -sixth session: Decision of the Council of the International Seabed Authority relating to the review of the environmental management plan for the Clarion -Clipperton Zone, 10 December 2021. ISBA/26/C58

Potential future commercial-scale nodule collection operations in the CCZ are certain to disturb wildlife in the operating area. The nature and severity of these impacts on CCZ wildlife are expected to vary by species and are currently subject to significant uncertainty. Our studies baselining wildlife and ecosystem function, piloting the nodule collection system and assessing impacts arising from the use of this system are currently in progress. Given the significant volume of deep water and the difficulty of sampling or retrieving biological specimens in the CCZ, a complete biological inventory might never be established. Accordingly, impacts on CCZ biodiversity may never be, completely and definitively known. For the same reasons, it may also not be possible to definitively establish whether the impact of nodule collection on global biodiversity will be less significant than those estimated for land-based mining for a similar amount of produced metal.

It is also currently not definitively known how effectively the risk of biodiversity loss in the CCZ could be eliminated or reduced through mitigation strategies or how long it will take for disturbed seabed areas to recover naturally. Prior research indicates that the density, diversity and function of fauna representing most of the resident biomass (including mobile, pelagic and microbial life) are expected to recover naturally over years to decades. However, a high level of uncertainty exists around recovery of fauna that requires the hard substrate of nodules for critical life function. The extent to which planned measures such as leaving behind partial nodule cover and setting aside no-take zones would aid recruitment and recovery of nodule-dependent species in impacted areas will depend on factors like habitat connectivity, which is an area that is still under study.

We are still in the exploration phase of the project and have not yet obtained the necessary permitting and licenses necessary to commence commercial-scale nodule collection operations in the CCZ nor have we obtained the applicable environmental permits and other permits required to build and operate commercial scale polymetallic nodule processing and refining plants on land.

All extractive industries result in impacts to the receiving environment. Nodule collection is no exception and will impact the deep-sea marine environment through nodule removal, disturbance of seafloor sediment and return of seawater used for nodule transport that is expected to contain residual sediment and nodule fines back in the water column (“plumes”). Baselineing the impacted marine environment by characterizing the ecosystem and then developing measures to avoid and mitigate these impacts is the central focus of our Environmental and Social Impact Assessment (“ESIA”) program currently being undertaken in partnership with some of the world’s leading deep-sea research institutions. Nodule removal will impact species that depend on the hard nodule substrate for attachment. The severity of the impact will depend on (1) the extent to which these species are represented in the APEIs set aside by the ISA and additional no-take zones set aside by us and (2) the extent to which residual nodule cover will aid recruitment and recovery of these species in impacted areas. Disturbance of the seafloor by collector robots is expected to disturb (mostly microbial) organisms living in and on the sediments. Impact severity will depend on the depth of sediment disturbance (expected to be approximately 5 cm based on modelling, lab tests, and recent collector tests completed in the CCZ by two other nodule contract-holders, Belgium’s Global Sea Mineral Resources NV(GSR) and the German’s BGR) and the impact this disturbance has on benthic ecosystem function. Over 90% of the entrained sediment is expected to be separated from nodules inside the collector robot and discharged behind the collector robot, most settling back to the seafloor within a few hundred meters. The impact of the residual plume will depend on how quickly the smaller mobile sediment particles re-settle, how far they travel and how the resulting sedimentation impacts the benthic organisms. Less than 10% of entrained sediment that will likely evade separation inside the collector robot will be transported with nodules and seawater through the riser pipe to the surface production vessel where nodules get dewatered and residual water, sediment and nodules fines will be returned at some depth in the water column below the highly populated photic zone. Potential impacts from the mid-water sediment plume could include clogging of the delicate respiratory and filter feeding structures of pelagic zooplankton species, such as jellyfish and krill. However, the mid-water discharge is expected to have very low solid particle concentration and dilute to low levels within minutes. The depth of discharge will be selected based on ESIA results to minimize impact on life in the midwater column.

Competitive Strengths

We believe we are well positioned to meet the growing demand for critical battery metals:

- **Increasing demand:** The response to the climate change crisis is accelerating demand for EVs, renewable energy storage and infrastructure. In August 2021, the U.S. government announced a target of 50% EV sales by 2030. The announcement was followed by a ramp-up of industry commitments to build battery cell manufacturing gigafactories in the U.S. In October 2021, most of the world’s nations and automakers at COP26 in Glasgow committed to 100% EV sales by 2035 in leading markets and by 2040 globally. To manufacture battery cells, gigafactories will need critical battery metals like nickel, cobalt, manganese and copper to meet rising battery demand.
- **Rising battery metal and battery cell prices:** Commodity prices for metals like nickel and copper have recently reached multi-year highs and battery cell production costs are rising for the first time since the introduction of gigafactories going back in 2014.
- **Availability of abundant and high-grade resource off the U.S. western seaboard:** There are four critical battery metals (nickel, copper, cobalt and manganese) in relatively high concentrations in a single nodule resource and we believe our contract areas have estimated *in situ* quantities of these metals in quantities equivalent to the requirement for 280 million EVs, roughly the size of the entire U.S. passenger vehicle fleet on the road today.

- **Opportunity to re-shore battery metal production in the U.S.:** Current supply chain of battery materials to the U.S. is approximately 50,000 miles long and is predominantly controlled by nations and companies outside of the U.S., which is leading to increasing concerns about supply chain security in the U.S. and interest in breaking the U.S. mineral dependence by re-shoring battery material supply chain in the U.S. Our estimated resource is 1,300 nautical miles from San Diego and we believe we can eventually process and refine our polymetallic nodules in the U.S. which could potentially decrease the supply chain in the U.S. to 1,500 miles.
- **Opportunity to reuse existing assets and skills:** We believe the downturn in new offshore oil and gas exploration is creating an opportunity for us to partner with offshore service providers with deep operational experience in subsea environments gained in the oil and gas industry and with existing assets that can be repurposed for our offshore operations.
- **Lower expected production cost:** At our potential steady state production (expected to be approximately 12.5Mtpa of wet nodules from 2030 to 2045), we expect to be the second lowest cost nickel producer in the world (which includes the sale of byproducts).
- **Lower expected environmental, social and governance footprint:** Based on several Lifecycle Assessments (“LCAs”) and that we commissioned and certain of our executive officers co-authored, we expect a potential 70-99% reduction of most lifecycle environmental, social and governance (“ESG”) impacts as compared to metal production from conventional land sources by developing a new type of high-grade multi-metal source found on the abyssal plain - a low biomass, low carbon sequestration deep-sea environment removed from human settlement.

The Business Combination

On September 9, 2021, we completed the Business Combination with SOAC. The transaction resulted in the combined company being renamed “TMC the metals company Inc.” and the combined company’s common shares and warrants to purchase common shares commenced trading on the Nasdaq Global Select Market (“Nasdaq”) on September 10, 2021, under the symbols “TMC” and “TMCWW,” respectively.

Exploration Contracts

We currently hold exclusive exploration rights through our subsidiaries in NORI and TOML and exclusive commercial rights through agreement with Marawa, to certain polymetallic nodule areas in the CCZ.

NORI. NORI our wholly-owned subsidiary, holds exploration rights to four blocks (NORI Area A, B, C, and D, the “NORI Contract Area”) covering 74,830 km² in the CCZ that were granted by the ISA in July 2011. NORI is sponsored by Nauru pursuant to a certificate of sponsorship signed by the Government of Nauru on April 11, 2011. The D block of the NORI area (“NORI Area D”) is the seafloor parcel where we have performed the most resource definition and environmental work to date. NORI commissioned AMC Consulting Ltd, a leading mining consulting firm (AMC), to undertake a preliminary economic assessment (“PEA”) of the mineral resource contained in NORI Area D and to compile a technical report compliant with Canadian National Instrument (NI 43-101), which was completed in March 2021. AMC subsequently compiled the NORI Technical Report Summary, dated March 2021, which included an initial assessment and an economic analysis of NORI Area D prepared in accordance with the SEC’s Modernization of Property Disclosures for Mining Registrants set forth in subpart 1300 of Regulation S-K (the “SEC Mining Rules”). The NORI Technical Report Summary is filed as Exhibit 96.1 to the registration statement of which this prospectus forms a part.

TOML. TOML our wholly-owned subsidiary which we acquired in March 2020, holds exploration rights to an area covering 74,713 km² in the CCZ that were granted by the ISA in January 2012 (the “TOML Contract Area”). On March 8, 2008, Tonga and TOML entered into a sponsorship agreement formalizing certain obligations of the parties in relation to TOML’s exploration application to the ISA (subsequently granted) for the TOML Contract Area. The sponsorship agreement was updated on September 23, 2021. TOML commissioned a Technical Report Summary by AMC, dated March 2021, which is filed as Exhibit 96.2 to the registration statement of which this prospectus forms a part.

Marawa. DGE, our wholly-owned subsidiary, entered into agreements with Marawa and Kiribati which provide DGE with exclusive exploration rights to an area covering 74,990 km² in the CCZ (the “Marawa Contract Area”). The exploration contract between Marawa and the ISA (the “Marawa Exploration Contract”) was signed on January 19, 2015. To date, very limited offshore marine resource definition activities in the Marawa Contract Area have occurred and we expect to commit future resources as contractually agreed with Marawa to evaluate the future commercial viability of any project in such area. We have not completed adequate exploration to establish the economic viability of any project in the Marawa Contract Area. Further work will need to be conducted in order to assess the viability of any potential project in the Marawa Contract Area and such work may take several years until such assessment can be made. Marawa has delayed certain of its efforts in the Marawa Contract Area while it determines how it will move forward with additional assessment work.

Business Strategy

Our contemplated business spans the entire lifecycle from the resource acquisition and definition stage through the collection and transportation phases into the processing and refining of nodules onshore and finally in product marketing and offtake (and eventually recycling of end-of-life products containing nodule-derived metals). NORI and TOML, two of our subsidiaries, intend to operate in the CCZ under the effective supervision, regulation and sponsorship of the government of Nauru and the Kingdom of Tonga, respectively. We intend to engage in processing operations in locations that are yet to be determined. We have chosen an asset-light approach to our operations and have focused on forming deep strategic partnerships with leading offshore and onshore companies in every aspect of our operations.

Our key strategic alliances in 2021 included:

Allseas. Allseas Group S.A. (Allseas), a leading global offshore contractor, is developing the pilot collection system, which is expected to be modified into the initial smaller scale commercial production system and serve as the basis for the design of a full-scale commercial production system.

Maersk. Maersk Supply Service NS (Maersk), a leading offshore marine services company, provided us with vessel operations and project management services for resource definition and environmental offshore campaigns between 2018 and 2021. Our agreement with Maersk ended pursuant to its terms in January 2022 following the completion of all NORI Area D baseline campaigns. We have solicited proposals from third parties to provide a survey vessel and specialized services required to support the implementation of the collector test monitoring survey planned for 2022 discussed below.

Glencore: Glencore International AG (Glencore) holds offtake rights on 50% of the NORI nickel and copper production.

In addition, we have worked with an engineering firm Hatch Ltd. (Hatch) and consultants Kingston Process Metallurgy Inc. (KPM) to develop a near-zero solid waste flowsheet. The pyromet stages of the flowsheet were tested as part of our pilot plant program at FLSmith & Co. A/S's and XPS Solutions' (Glencore subsidiary) facilities and hydrometallurgical refining stages are being carried out at SGS SA. The near-zero solid waste flowsheet is the process design that is expected to serve as the basis for our onshore processing facilities.

Phased Project Development

Currently, we are an exploration stage company with a completed initial assessment, working towards a pre-feasibility study. We expect to enter into the feasibility study phase in 2023 following completion of the pilot collection test with Allseas in the CCZ. Having significantly advanced resource definition and environmental baseline studies on NORI Area D, we intend to apply for an exploitation contract on that area first. If we obtain an exploitation contract, we then plan to start with a small-scale commercial production ("Project Zero") in 2024 in which we expect to collect and process up to 1.3Mtpa of wet nodules. Subject to the success of Project Zero and any regulatory requirements, we then expect to move into the next phase of production ("Project One") in which we intend to scale up production and expect to collect and process up to approximately 12.5Mtpa of wet nodules at steady state (expected 2030-2045), as outlined in the NORI – D Technical Report Summary.

Current Work Program

We are currently focused on applying for our first exploitation contract from the ISA on the NORI Area D, as defined below, with the goal of potentially starting commercial production in 2024. To reach our objective and initiate commercial production in 2024, we are: (i) defining our resource and project economics, (ii) developing an offshore nodule collection system, (iii) assessing the ESG impacts of offshore nodule collection, and (iv) developing onshore technology to process collected polymetallic nodules into a manganese silicate product, and an intermediate nickel-copper-cobalt matte product and/or end-products like nickel and cobalt sulfates, and copper cathode.

- (i) **Resource definition and project economics:** Having completed a total of nine offshore resource definition campaigns, collected samples and completed subsea surveys for resource evaluation, we have defined the size and quality of our resource in the NORI and TOML Areas, as described below, in our SEC Regulation S-K (subpart 1300) compliant *Technical Report Summary - Initial Assessment of the NORI Property, Clarion-Clipperton Zone, Pacific Ocean* dated March 17, 2021 ("NORI Initial Assessment") and *Technical Report Summary - TOML Mineral Resource, Clarion-Clipperton Zone, Pacific Ocean* dated March 26, 2021 ("TOML Mineral Resource Statement"), respectively, prepared by AMC. From this work, both NORI and TOML have reported measured, indicated and inferred resources as tabulated below.

NORI Area 2020 Mineral Resource Estimate, in situ, for the NORI Areas within the CCZ at 4kg/m² nodule abundance cut-off.

NORI Area	Category	Tonnes	Abundance	Nickel	Copper	Cobalt	Mn	Silicon
		(Mt (wet))	(wet kg/m ²)	(%)	(%)	(%)	(%)	(%)
D	Measured	4	18.6	1.42	1.16	0.13	32.2	5.1
D	Indicated	341	17.1	1.4	1.14	0.14	31.2	5.5
D	Measured + Indicated	345	17.1	1.40	1.14	0.14	31.2	5.5
D	Inferred	11	15.6	1.38	1.14	0.12	31.0	5.5
A	Inferred	72	9.4	1.35	1.06	0.22	28.0	-
B	Inferred	36	11	1.43	1.13	0.25	28.9	-
C	Inferred	402	11	1.26	1.03	0.21	28.3	-

Note: Tonnes are quoted on a wet basis and grades are quoted on a dry basis, which is common practice for bulk commodities. Moisture content was estimated to 24% w/w. These estimates are presented on an undiluted basis without adjustment for resource recovery.

TOML Area 2020 Mineral Resource Estimate, in situ, for the TOML Areas within the CCZ at 4kg/m² nodule abundance cut-off.

TOML Area	Classification	Tonnes (x10 ⁶ wet t)	Abundance (wet kg/m ²)	Ni (%)	Cu (%)	Co (%)	Mn (%)
A	Inferred	114	11.0	1.1	1.0	0.2	25.0
B	Measured	3	11.8	1.3	1.0	0.2	27.6
B	Indicated	14	11.1	1.3	1.1	0.2	28.6
B	Inferred	63	9.1	1.2	1.0	0.3	25.9
C	Indicated	15	8.6	1.3	1.2	0.2	30.5
C	Inferred	115	9.0	1.3	1.1	0.2	28.2
D	Indicated	29	12.2	1.3	1.2	0.2	30.1
D	Inferred	102	9.0	1.3	1.2	0.2	28.8
E	Inferred	58	10.6	1.3	1.1	0.2	28.7
F	Indicated	12	21.6	1.5	1.2	0.1	32.5
F	Inferred	244	16.6	1.4	1.2	0.1	32.2
Total	Measured	2.6	11.8	1.3	1.0	0.2	27.6
Total	Indicated	69.6	11.8	1.3	1.2	0.2	30.3
Total	Inferred	696	11.3	1.3	1.1	0.2	29.0

Note: Tonnes are quoted on a wet basis and grades are quoted on a dry basis, which is common practice for bulk commodities. Moisture content was estimated to 28% w/w. These estimates are presented on an undiluted basis without adjustment for resource recovery.

We plan to continue to define our resource in the NORI and TOML areas and develop the project economics.

- (ii) **Offshore nodule collection system development:** We are working with our strategic partner and investor, Allseas, to develop a system to collect, lift and transport nodules from the seafloor to shore. The offshore collection system consists of collector robots on the seafloor, a riser and lift system, and a surface production support vessel. The nodules would be expected to be collected from the seafloor by self-propelled, tracked collector robots using seawater jets aimed at nodules in parallel with the seafloor. No rock cutting, digging, drill-and-blast or other breakage are expected to be required at the point of collection. The collectors would be remotely controlled and supplied with electric power via umbilical cables from the production support vessel. To test the system and assess its environmental impacts, we entered into a contract with Allseas to undertake a pilot trial of the collection system in the NORI Area D in the second half of 2022 (the Pilot Mining Test System or “PMTS”). The successful completion of the PMTS would support our application for an exploitation contract with the ISA. Until the successful completion of the PMTS, Allseas is contracted to cover the development cost associated with the PMTS. We have developed and submitted the Environmental Impact Statement (“EIS”) for this test to the ISA in July 2021 and submitted a revised EIS in February 2022 following public review. The surface production support vessel, the *Hidden Gem*, was acquired by Allseas in February 2020 and has strategic importance to us, since it will support the PMTS and is then expected to be upgraded to a small-scale, low-capital early production system. This vessel has undergone modifications in Rotterdam, Netherlands. The pilot collector robot has been assembled at a fabrication facility in Heijningen, Netherlands, has been integrated onto the vessel and is undergoing sea trials. Prior to the planned collector test in the CCZ in the second half of 2022, the *Hidden Gem* will be used for component testing in the Dutch EEZ and in the Atlantic Ocean.
- (iii) **Environmental and social impact assessment (“ESIA”) for offshore nodule collection:** The ESIA is an integral part of preparing our application for the ISA exploitation contract on the NORI Area D. Our planned ESIA program consists of over 100 discrete studies and relies on the work of several independent deep-sea research institutions. In 2021, our partnership with Maersk enabled us to undertake complex multi-objective offshore campaigns, each with multiple teams of scientists using various types of equipment. The total of eight offshore environmental campaigns (approximately 250 days at sea) focusing on collecting environmental baseline data were expected to be completed by the end of 2021. NORI submitted the EIS for the collector test in July 2021 to the ISA and submitted a revised EIS in February 2022 following public review. The EIS received over 650 comments from a broad group of stakeholders. We submitted our responses to these comments as well as an updated EIS to the ISA on March 1, 2022. Provided that we receive a response from the ISA on the acceptability of the scope of our updated EIS no later than July 2022, we expect that our subsidiary, NORI, will be able to begin its pilot collection test in the second half of 2022. We are currently in the planning stage of the last component of the environmental program: testing the offshore pilot nodule collection system and monitoring its environmental impacts while it collects nodules in the NORI Area D expected to occur in the second half 2022.
- (iv) **Onshore technology development:** To process and refine collected nodules into critical metals, we have developed a flowsheet together with a metallurgical process design firm, Hatch Ltd. (“Hatch”). This flowsheet uses conventional equipment, modified for the unique nature of the polymetallic nodule resource to deliver a process that is expected to generate near zero solid waste. The key products generated by this process are nickel sulfate, cobalt sulfate, copper cathode, manganese silicate and fertilizer-grade ammonium sulfate. The processing flowsheet also provides the potential to generate an intermediate product, a nickel-copper-cobalt matte. Nickel is expected to account for almost half of future production revenues. We have completed lab-scale test work and offshore campaigns to collect a bulk sample for pilot-scale metallurgical testing. We are now in the middle of the pilot plant program. In 2021, we successfully completed calcining and smelting of nodules into a manganese silicate product and nickel-copper-cobalt alloy intermediate, followed by converting and sulfidation of the alloy into matte. We continue testing the hydrometallurgical refining phase where matte is processed to produce nickel sulfate, cobalt sulfate, copper cathode and fertilizer grade ammonium sulfate.

Additionally, we are also engaged in several technical scoping studies for a potential first small-scale production plant in Asia. On March 16, 2022 we announced a business collaboration with Epsilon Carbon Pvt., LTD. (“Epsilon Carbon”) to complete a pre-feasibility study for a commercial polymetallic nodule processing plant in India with the targeted production capacity of more than 30,000 tonnes per annum (TPA) of an intermediate nickel-copper-cobalt matte product used for active cathode material (CAM) for Nickel Manganese Cobalt (NMC) and other nickel-rich cathode chemistries for lithium-ion batteries and more than 750,000 TPA of manganese silicate by-product expected to be used in manganese alloy production for the steel industry (“Project Zero Plant”). Epsilon Carbon intends to deliver a pre-feasibility report (“PFR”) for a potential plant in India powered by renewables and with the targeted processing capacity of 1.3 million tonnes per annum (Mtpa) of wet nodules and production start in time to receive nodules collected from NORI-D area starting around the fourth quarter of 2024, subject to TMC’s subsidiary NORI securing an exploitation contract from the ISA. It is anticipated that TMC and Epsilon Carbon will enter binding Heads of Terms for construction and operations of Project Zero Plant by September 30, 2022. TMC and Epsilon Carbon have both agreed not to enter into any binding agreements with any other third party for the construction and operation of a processing plant for polymetallic nodules through the earlier of TMC and Epsilon Carbon entering into binding Heads of Terms with respect to the Project Zero Plant or March 31, 2023.

Summary of Mineral Resources

Below is a summary table of estimated mineral resources in NORI and TOML contract areas as of December 31, 2021. The estimated mineral resources in these areas were determined in 2021 as of December 31, 2020, and also reflect the estimated mineral resources as of December 31, 2021, as none of the mineral resources in these areas were depleted by mining or any other activities. See “Properties” for additional information about our estimated mineral resources. Both of these contract areas are in the exploration stage.

Summary Mineral Resources, In-Situ, at End of the Fiscal Year Ended December 31, 2021 at 4kg/m² abundance cut-off and based on nickel metal \$16,472/t; nickel in nickel sulfate \$18,807/t Ni; copper metal \$6,872/t; cobalt metal \$46,333/t; cobalt in cobalt sulfate \$56,920/t Co; manganese in manganese silicate \$4.50/dmtu Mn.

	Measured mineral resources		Indicated mineral resources		Measured + indicated mineral resources		Inferred mineral resources

Total	6.6	30.4	410.6	31.0	417.2	31.0	923	28.6

Note: Tonnes are quoted on a wet basis and grades are quoted on a dry basis, which is common practice for bulk commodities. Moisture content was estimated to be 24% w/w for NORI and 28% w/w for TOML. These estimates are presented on an undiluted basis without adjustment for resource recovery.

As reflected in the initial economic analysis of NORI Area D contained in the NORI Technical Report Summary, a discounted cash flow analysis considering the intended pre-development work in 2024, discounting at 9% per annum, and assuming metal prices for nickel metal \$16,472/t; nickel in nickel sulfate \$18,807/t Ni; copper metal \$6,872/t; cobalt metal \$46,333/t; cobalt in cobalt sulfate \$56,920/t Co; manganese in manganese silicate \$4.50/dmtu Mn, indicates a NORI Area D project net present value (as of January 1, 2021) of \$6.8 billion. The initial assessment included in the NORI Technical Report Summary is a conceptual study of the potential viability of NORI's mineral resources. This initial assessment indicates that development of the NORI mineral resource is potentially technically and economically viable; however, due to the preliminary nature of project planning and design, and the untested nature of the specific seafloor production systems at a commercial scale, economic viability has not yet been demonstrated.

The NORI Technical Report Summary and TOML Technical Report Summary do not include the conversion of mineral resources to mineral reserves.

You are specifically cautioned not to assume that any part or all of the mineral deposits in these categories will ever be converted into mineral reserves, as defined by the SEC. You are also cautioned that mineral resources do not have demonstrated economic value. Inferred mineral resources have a high degree of uncertainty as to their existence and to whether they can be economically or legally commercialized. Under the SEC Mining Rules, estimates of inferred mineral resources may not form the basis of an economic analysis. It cannot be assumed that all or any part of an inferred mineral resource will ever be upgraded to a higher category. A significant amount of exploration must be completed in order to determine whether an inferred mineral resource may be upgraded to a higher category. Therefore, you are cautioned not to assume that all or any part of an inferred mineral resource exists, that it can be economically or legally commercialized, or that it will ever be upgraded to a higher category. Approximately 97% of the NORI Area D resource is categorized as measured or indicated.

Likewise, you are cautioned not to assume that all or any part of measured or indicated mineral resources will ever be upgraded to mineral reserves.

Collection and Processing of Polymetallic Nodules

Collection and Shipping

We are planning a phased development for NORI Area D. Polymetallic nodules would be collected using offshore collection systems, comprising of collector robots on the seafloor, a riser and lifting system (RALS) in the water column, and a production support vessel on the surface. The nodules are expected to be transferred to transport vessels and shipped to onshore processing facilities.

Through our strategic partnership with Allseas, a former drillship vessel (the *Hidden Gem*) acquired by Allseas in February 2020 has been converted and modified to undertake a pre-production collector test in which a collector vehicle, RALS and other systems will be tested. If we obtain an exploitation contract, the first phase of commercial production ("Project Zero") would then be expected to commence after the *Hidden Gem* has been upgraded to become a production support vessel that can produce up to 1.3 Mtpa (wet) of nodules. The nodules collected in Project Zero are expected to be processed through either existing third-party facilities on a tolling basis or alternatively through partnerships to construct new Rotary Kiln-Electric arc Furnace ("RKEF") facilities. In the next phase of development ("Project One"), as outlined in the NORI – D Initial Assessment Technical Report Summary, production is expected to be expanded with an additional converted drillship (*Drill Ship 2*), a subsequent upgrade to the *Hidden Gem*, and the construction of a bespoke production support vessel (*Collector Ship 1*).

The intended seafloor production system operated at 4km depth (picture not to scale)

In order to test the collection system, we entered into a contract with Allseas to undertake a pre-production collector test. If such test is successful, we expect that commercial production would then commence after the upgrading of the *Hidden Gem* into a production vessel. If we obtain an exploitation contract, we expect to collect 1.3 Mtpa (wet) of polymetallic nodules for use in Project Zero. For Project One, we believe that a fleet of three production vessels, each with multiple dedicated seafloor collectors, would be estimated to produce approximately 12.5 Mtpa of wet nodules at steady state (expected 2030-2045), which we intend to process, either at a new facility to be constructed by us or by potential processing partners, subject to available capital, or at third-party facilities pursuant to a toll treatment model.

We believe that this phased approach to development allows for proper management of risk and for progressive improvement of engineering and operating systems. The intention is to implement the project in multiple phases that will allow the offshore collection systems to be tested and then polymetallic nodule production to be gradually ramped up. We also believe that this approach will de-risk the project for a relatively low initial capital investment. Additionally, this phased development will allow for an adaptive approach to environmental management providing learning at small-scale which would be applied as production increases in scale.

Mineral Processing and Refining and Metallurgical Testing

Pyrometallurgical processing of polymetallic nodules has been extensively studied since the early 1970s.

From an early stage, we have recognized that processing represents a key to potentially commercializing seafloor polymetallic nodules and to becoming a low-cost producer of nickel, manganese, copper and cobalt products. Moreover, we believe that there is a commercial advantage in positioning ourselves as a leader in the onshore processing of seafloor polymetallic nodules.

To this end, we have been working with a leading global process engineering group Hatch, and a professional services firm, to develop pyrometallurgical processing and hydrometallurgical refining technologies for the production of battery metals feedstocks from nodules. Hatch has developed a near-zero solid waste flowsheet and has overseen a pyrometallurgical pilot plant program consisting of several phases: the pyrometallurgical processing phase has been completed at FLSmidth's and XPS Solutions' (Glencore subsidiary) facilities, the hydrometallurgical refining phase is in progress at SGS facilities. Pursuant to an engineering and consulting services agreement, Hatch is assisting and advising us during the development of the pilot test program and is analyzing and interpreting the testing results through reports provided by such test facilities.

We expect that the processing of the polymetallic nodules from the NORI Contract Area would also be ramped up in phases. This plan includes initially toll treating polymetallic nodules at existing RKEF plants, utilizing existing excess industry capacity. We believe that there is significant interest to deploy underutilized RKEF plants which may have become stranded as a result of the Indonesian government nickel laterite ore export ban restricting supply of the nickel laterite feedstock that they have previously utilized. These RKEF plants were originally built to convert nickel laterite to nickel pig iron and could potentially be converted to smelt polymetallic nodules. While we have not completed the negotiations of any definitive agreements with RKEF plants, we believe that we may be able to do so in the future on commercially reasonable terms. In parallel, we are actively exploring two additional scenarios of either co-locating new RKEF capacity with a potential future offtake of our manganese silicate product or building a new RKEF plant with a converter isle with a partner willing to finance, build and operate such a facility.

In the future, based on the work performed by Hatch and subject to available capital, we are contemplating the construction of a processing plant(s), which may include pyrometallurgical and hydrometallurgical circuits. Nodule processing would be increased in phases by treatment in this new plant or plants.

Strategic Alliances and Key Commercial Agreements

Allseas Agreements

On March 29, 2019, we entered into a Strategic Alliance Agreement with Allseas, whereby the parties will conduct project development of an integrated offshore nodule collection system for use by our subsidiaries. As initially constituted, Allseas agreed to subscribe for (i) 6,666,667 DeepGreen Common Shares for a purchase price of \$20,000,000 in cash (the "Subscription"), the entire amount of which was funded, and (ii) an additional 10,000,000 DeepGreen Common Shares in exchange for services rendered by Allseas in respect of the contemplated pilot mining test system (the "PMTS"), which would be designed, built and tested by Allseas. The 10,000,000 shares would only be issued upon completion of the pilot mining test in the CCZ using the PMTS (the "Success Fee Shares"), along with an additional \$30 million cash success fee that would be payable simultaneously therewith. The Strategic Alliance Agreement also contemplated that the parties would enter into other commercial arrangements following the successful completion of the pilot trials of the PMTS in the CCZ.

On July 8, 2019, we and Allseas entered into the Pilot Mining Test Agreement (the “PMTA”), which governed the terms, design specifications, procedures, and timetable under which Allseas agreed to complete the PMTS, to be used by NORI. The PMTA was subsequently amended on September 1, 2019, February 20, 2020, and March 4, 2021. The Strategic Alliance Agreement was also amended on March 4, 2021 (collectively with the PMTA amendment of the same date, the “Amendment”), which Amendment became effective upon the Closing. Pursuant to the Amendment, the cash fee payable pursuant to the PMTA was amended such that we would pay to Allseas (i) \$10,000,000 on June 30, 2021 (which we subsequently amended with Allseas to change to within 10 business days of the Closing in a further amendment; this amount was paid on October 5, 2021), (ii) \$10,000,000 on the later of January 1, 2022 and such time that confirmation is received with respect to the successful completion of the North Sea drive test, and (iii) \$10,000,000 upon successful completion of the pilot trials in the CCZ using the PMTS. Pursuant to the Amendment, except as provided therein, Allseas may not, without our prior written consent, terminate the Strategic Alliance Agreement or the PMTA before NORI receives an ISA exploitation contract.

Also on March 4, 2021, we issued the Allseas Warrant to Allseas, which shall vest upon successful completion of CCZ trial using the PMTS. A maximum of 11.6 million warrants to purchase common shares will vest if the CCZ trials using the PMTS are completed by September 30, 2023, gradually decreasing to 5.8 million warrants to purchase common shares if the CCZ trials using the PMTS are completed after September 30, 2025. The Allseas Warrant was issued to Allseas in lieu of any future obligation to issue the Success Fee Shares. The Allseas Warrant shall vest only upon (and not before) the successful completion of the CCZ trials using the PMTS and will expire on September 30, 2026. The Warrant Credit Value shall be determined as of June 1, 2022 based on the closing trading price of the Common Shares. In the event that the Warrant Credit Value is greater than \$150,000,000, then on the vesting date of the Allseas Warrant, we shall receive a “credit” for the amount by which such Warrant Credit Value exceeds \$150,000,000. We will be able to exchange such credit value for future goods and services from Allseas. No amount will be due or receivable under the Allseas Warrant if the Warrant Credit Value is under \$150,000,000 on June 1, 2022.

With respect to Allseas, if the CCZ trials using the PMTS is successfully completed, other than the Warrant Credit Value, the PMTA will terminate by its terms, whereas the overarching Strategic Alliance Agreement will remain in place.

On March 16, 2022, NORI and Allseas entered into a non-binding term sheet for the development and operation of a commercial nodule collection system. The PMTS developed and currently being tested by Allseas is expected to be upgraded to a commercial system with a targeted production capacity of 1.3 Mtpa of wet nodules and expected production readiness by the fourth quarter of 2024 (“Project Zero System”). NORI and Allseas intend to equally finance all costs related to developing and getting Project Zero System into production currently estimated at less than EUR100 million. It is anticipated that NORI will not have to make any Project Zero System-related payments to Allseas until March 31, 2023. Once in production, NORI expects to pay Allseas a nodule collection and transshipment fee estimated at approximately EUR 150 per wet tonne in the first year of operations and expected to be reduced by more than 20% in the following years as Allseas scales up production to 1.3 Mtpa of wet nodules. The parties intend to further detail and revise these cost estimates in the definitive agreement contemplated by the non-binding term sheet, which the parties expect to enter into no later than December 31, 2022 following the completion of the pilot collection tests. Subject to the necessary regulatory approvals, Allseas and NORI also intend to investigate acquiring a second production vessel similar to the *Hidden Gem*, a Samsung 10000, with the potential for it to be engineered to support a higher production rate of 3 million tonnes of wet nodules per year and lower associated per tonne production cost. There can be no assurances, however, that we will enter into definitive agreements with Allseas contemplated by the non-binding term sheet in a particular time period, or at all, or on terms similar to those set forth in the non-binding term sheet, or that if such definitive agreements are entered into by us that the proposed commercial systems and second production vessel will be successfully developed or operated in a particular time period, or at all.

Offtake Agreements

On May 25, 2012, our wholly-owned subsidiary, DGE, and Glencore, entered into a copper offtake agreement and a separate nickel offtake agreement (together, the “Glencore Offtake Agreements”), pursuant to which Glencore has the right to purchase from DGE 50% of the annual quantity of copper material and 50% of the annual quantity of nickel material produced by DGE from ore derived from the NORI Contract Area at a processing plant directly owned or controlled by DGE. Pursuant to the Glencore Offtake Agreements, for London Metal Exchange (“LME”) Codelco registered Grade “A” copper cathodes, the delivered price is the official LME Copper Grade “A” Cash Settlement quotation as published in the London Metal Bulletin averaged over the month of shipment or the following month at Glencore’s choice, plus the official long-term contract premium as announced annually by Codelco, basis CIF Main European Ports (Rotterdam, the Netherlands). For LME Registered Primary Nickel, the delivered price is the official LME Primary Nickel Cash Settlement averaged over the month of shipping or the following month at Glencore’s choice. For other copper-bearing material and other nickel-bearing material, the parties shall agree a price annually for the forthcoming calendar year on the basis of prevailing market prices for such copper products and such nickel products. The Glencore Offtake Agreements are for the life of the NORI Contract Area, and either party may terminate the agreement upon a material breach or insolvency of the other party. Glencore may also terminate either agreement by giving 12 months’ prior written notice. The Glencore Offtake Agreements do not extend to any other of our entities in the event other entities are the ultimate processing owners for metal products. The Glencore Offtake Agreements only apply with respect to metals processed and developed from the NORI areas that are processed by a facility owned or controlled by DGE and do not apply to other projects (including for example Marawa or TOML). Concurrent with entering into the Glencore Offtake Agreements, Glencore made an equity investment of \$5 million into our company.

Non-Binding Memorandum of Understanding with Epsilon Carbon Pvt, LTD.

On March 16, 2022, we announced a business collaboration with Epsilon Carbon through the signing of a non-binding memorandum of understanding under which Epsilon Carbon intends to complete a pre-feasibility study for a commercial polymetallic nodule processing plant in India with the targeted production capacity of more than 30,000 tonnes per annum (TPA) of an intermediate nickel-copper-cobalt matte product used for active cathode material (CAM) for Nickel Manganese Cobalt (NMC) and other nickel-rich cathode chemistries for lithium-ion batteries and more than 750,000 TPA of manganese silicate by-product expected to be used in manganese alloy production for the steel industry (“Project Zero Plant”). Epsilon Carbon intends to deliver a pre-feasibility report (“PFR”) for a plant in India powered by renewables and with the targeted processing capacity of 1.3 million tonnes per annum (Mtpa) of wet nodules and production start in time to receive nodules collected from NORI Area D starting around the fourth quarter of 2024, subject to TMC’s subsidiary NORI securing an exploitation contract from the ISA. It is anticipated that TMC and Epsilon Carbon will enter binding Heads of Terms for construction and operations of Project Zero Plant by September 30, 2022. TMC and Epsilon Carbon have both agreed not to enter into any binding agreements with any other third party for the construction and operation of a processing plant for polymetallic nodules through the earlier of TMC and Epsilon Carbon entering into binding Heads of Terms with respect to the Project Zero Plant or March 31, 2023. There can be no assurance that we will enter into such Heads of Terms or subsequent definitive agreement(s) in a particular time period, or at all, or on terms similar to those set forth in the memorandum of understanding, or that if such Heads of Terms or definitive agreement(s) are entered into by us that the proposed plant will be financed, engineered, permitted, constructed, operated or supplied in a particular time period, or at all, or successfully.

Competition

The metals production industry is capital intensive and competitive. Production of battery materials and manganese alloys is largely dominated by Chinese competitors. These competitors may have greater financial resources, as well as other strategic advantages to operate, maintain, improve and possibly expand their facilities. Additionally, domestic Chinese resources firms have historically been able to produce minerals and/or process metals from land-based operations at relatively low costs due to domestic economic and regulatory factors, including less stringent environmental and governmental regulations and lower labor and benefit costs. We may be unable to compete successfully with these and other competitors, including other land-based mining operations. In addition to three contracts held by TMC's subsidiaries and partners, 16 other entities (ISA Member States and private companies sponsored by ISA Member States) currently hold ISA Exploration Contracts for polymetallic nodules. If and when they move into the exploitation phase, each of these contract-holders could become potential competitors with respect to the collection of polymetallic nodules and the production of nickel, manganese, copper and cobalt products. Furthermore, several nation states are working on developing polymetallic nodule resources inside their EEZs, with the Cook Islands granting three exploration contracts for polymetallic nodules in February 2022. There is increasing competition from new and existing marine mineral players for the availability of marine exploration and support vessels, related marine equipment and specialized personnel, desirable exploration areas, suitable offshore collection and onshore processing equipment, and available capital. Some of our competitors may equally find more promising resources, identify or develop more economic technologies, enter into strategic partnerships that constrain our optionality, or may develop novel methods to collect nodules from the seafloor or process nodules into metals that are more economic than we currently contemplate.

Government Regulations

United Nations Convention on the Law of the Sea

The Area is defined as the seabed and subsoil beyond the limits of national jurisdiction (UNCLOS Article 1).

The principal policy documents governing the Area, including the CCZ, include:

- the UNCLOS, of 10 December 1982; and
- the 1994 Implementation Agreement.

UNCLOS deals with, among other things, navigational rights, territorial sea limits, exclusive economic zone jurisdiction, the continental shelf, freedom of the high seas, legal status of resources on the seabed beyond the limits of national jurisdiction, passage of ships through narrow straits, conservation and management of living marine resources in the high seas, protection of the marine environment, marine scientific research, and settlement of disputes.

Part XI of UNCLOS and the 1994 Implementation Agreement deal with mineral exploration and collection in the international seabed, known as the Area, providing a framework for entities to obtain legal title to areas of the seafloor from the ISA for the purpose of exploration and eventually collection of resources. UNCLOS became effective on November 16, 1994. A subsequent agreement relating to the implementation of Part XI of UNCLOS was adopted on July 28, 1994 and became effective on July 28, 1996. The 1994 Implementation Agreement and Part XI of UNCLOS are to be interpreted and applied together as a single instrument. As of August 20, 2020, UNCLOS had been signed by 167 States (countries) and the European Union.

International Seabed Authority

The ISA is an autonomous international organization established under UNCLOS and the 1994 Implementation Agreement to organize and control activities in the Area, particularly with a view to administering and regulating the development of the resources of the Area, in accordance with the legal regime established under UNCLOS and the 1994 Implementation Agreement. The ISA is comprised of UNCLOS signatories, 167 Member States, and the European Union. All parties to UNCLOS are members of the ISA. The ISA is mandated as the organization through which parties to UNCLOS shall organize and control all mineral-related activities in the Area. Two principal entities establish the policies and govern the work of the ISA: the Assembly, where all 167 members are represented (the “Assembly”), and a 37-member council elected by the Assembly (the “Council”). The Council has two advisory bodies: the Legal Technical Commission (LTC) (30 members), which advises the Council on all matters relating to the exploration and collection of non-living marine resources, such as polymetallic nodules, polymetallic sulphides and cobalt-rich ferromanganese crusts, and the Finance Committee (15 members), which deals with budgetary and related matters.

All rules, regulations, and procedures issued by the ISA to regulate prospecting, exploration, and collection of marine minerals are issued within a general legal framework established by UNCLOS and the 1994 Implementation Agreement. To date, the ISA has issued the following regulations (<https://www.isa.org.jm/mining-code/Regulations>):

- The Regulations on Prospecting and Exploration for Polymetallic Nodules in the CCZ (adopted July 13, 2000, as amended in 2013; the Regulations).
- The Regulations on Prospecting and Exploration for Polymetallic Sulphides (adopted May 7, 2010).
- The Regulations on Prospecting and Exploration for Cobalt-Rich Ferromanganese Crusts in the CCZ (July 2012).

No commercial polymetallic nodule collection operations have started anywhere in the world. Currently, exploration activities undertaken are aimed at gathering the necessary information on the location and quality of the minerals of the seabed as well as collecting all the necessary environmental information. To date, the ISA has approved 17 contracts in the CCZ for exploration of nodules, one in the Indian Ocean and one in the Western Pacific Ocean covering more than 1.35 million square kilometers of the seabed. This represents only 0.3 percent of the world’s oceans. Twelve of these contracts are sponsored by developing countries (including the sponsors of our subsidiaries NORI — Nauru, and TOML — Tonga, and our partner Marawa which is sponsored by the Republic of Kiribati). Thirteen countries and one intergovernmental consortium currently have contracts for the exploration of polymetallic nodules, seven countries have contracts for the exploration of polymetallic sulphides, and five countries have contracts for the exploration of cobalt-rich ferromanganese crusts. To date, no exploitation contracts for extracting minerals from the seafloor within the CCZ have been granted. The ISA is currently working on the development of a legal framework to regulate the commercialization of mineral development activities, as described below.

In 2014, the ISA completed a study looking at comparative extractive regulatory regimes. This was followed in March 2014 with a stakeholder survey seeking comments on what financial, environmental, and health and safety obligations should be included under the framework (ISA 2014).

In August 2017, the Council released the first Draft Regulations on Exploitation of Mineral Resources in the CCZ, as subsequently amended. In March 2019, the Council released the advance and unedited text (English only) of the Draft Regulations on Exploitation of Mineral Resources in the CCZ (ISBA/25/LTC/WP.1) (ISA, 2018). The revised draft exploitation regulations incorporated the consideration of requests addressed to the LTC by the Council during the first part of the 24th Session in March 2018, as well as certain comments by the Commission, and also reflected the responses to the first draft from stakeholder submissions. The exploitation regulations will create the legal and technical framework for collection and related operations. Finalization of the exploitation regulations remains subject to the decision of the members of the ISA. Final exploitation regulations must be adopted by the Council. The ISA was intending to have these regulations finalized by July 2020, but the COVID-19 pandemic disrupted ISA meetings and discussions.

The current proposed application process in the draft exploitation regulations consists of the following:

What we need to do to secure an exploitation contract.

We are still in the exploration phase of the project and have not yet obtained an exploitation contract from the ISA (“ISA Exploitation Contract”) to commence commercial-scale polymetallic nodule collection in the CCZ. An ISA exploitation contract application is comprised of several components, including an EIS for the proposed commercial operations, the end-product of a comprehensive ESIA program. In addition, we have also not yet obtained the applicable environmental permits and other permits required to build and operate commercial scale polymetallic nodule processing and refining plants on land.

However, Section 1, paragraph 15 of the 1994 Agreement relating to the Implementation of Part XI of the UNCLOS allows a member state whose national intends to apply for approval of a plan of work for exploitation to notify the ISA of such intention. This notice obliges the ISA to complete the adoption of exploitation regulations within two years of the request made by the member state.

On June 25, 2021, the Republic of Nauru submitted its notice to the ISA requesting that it complete, by July 9, 2023, the adoption of regulations necessary to facilitate the approval of plans of work for the commercial exploitation of polymetallic nodules. The notice submitted by the Republic of Nauru to the ISA has increased the likelihood that regulations will be adopted that will govern and enable commercial scale polymetallic nodule collection by mid-2023. If the ISA has not completed the adoption of such regulations within the prescribed time and an application for approval of a plan of work for exploitation is pending before the ISA, the ISA shall nonetheless consider and provisionally approve such plan of work based on: (i) the provisions of the UNCLOS; (ii) any rules, regulations and procedures that the ISA may have adopted provisionally at the time, (iii) the basis of the norms contained in the UNCLOS and (iv) the principle of non-discrimination among contractors.

In December 2021, the ISA held face to face meetings in Kingston Jamaica and established an ambitious work plan and road map to finalize regulations by July 2023 for the commercial exploitation of seabed minerals, including those necessary for the collection of polymetallic nodules. The road map includes two, two-week sessions of Council and one week of Assembly meetings that will be focused primarily on the finalization of the regulations in 2022. The road map also provides for a third two-week Council session in the fourth quarter of 2022, if required and subject to resources. Once adopted, these regulations will create the legal and technical framework for exploitation of the polymetallic nodules in the NORI, TOML and Marawa Contract Areas.

While, the ISA has developed a work plan and road map to complete the Final Regulations by July 2023, there can be no assurance that such regulations will be approved then, or at all. The Draft Regulations and several supporting standards and guidelines are at an advanced stage, but there remains uncertainty regarding the final form that these will take as well as the impact that such regulations, standards and guidelines will have on our ability to meet our objectives.

The NORI Exploration Contract

In July 2011, our wholly-owned subsidiary, NORI, was granted a polymetallic nodule exploration contract by the ISA, providing it exclusive rights to explore 74,830 km² in the CCZ pursuant to the NORI Exploration Contract (“NORI Exploration Contract”). The NORI Exploration Contract was approved by the Council on July 19, 2011, and entered into on July 22, 2011 between NORI and the ISA, and terminates on July 22, 2026, subject to extension.

The NORI Exploration Contract, which was granted pursuant to the ISA’s Regulations on Prospecting and Exploration for Polymetallic Nodules in the CCZ (the “Regulations”), formalized a 74,830 km² exploration area, has an initial term of 15 years (subject to renewal for successive five-year periods), and provides for certain obligations with respect to exploration, training, and other programs of activities for an initial five-year period. The NORI Exploration Contract also formalized the rights of NORI around future rights. Pursuant to the Regulations, NORI has the priority right to apply for an exploitation contract to collect polymetallic nodules in the same area (Regulation 24(2)). Such preference or priority may be withdrawn by the Council if the contractor has failed to comply with the requirements of its approved plan of work for exploration within the time period specified in a written notice or notices from the Council to the contractor indicating which requirements have not been complied with by the contractor. After a hearing process, the Council would be required to provide the reasons for its proposed withdrawal of preference or priority and shall consider any contractor’s response. The decision of the Council shall take account of that response and shall be based on substantial evidence. As soon as practicable, NORI intends to submit an application to collect polymetallic nodules in the same area as its current exploration rights. To date, no exploitation contracts for extracting minerals from the international seafloor have been granted. The ISA is currently working on the development of a legal framework to regulate the exploitation of polymetallic nodules in the Area, as described above.

In March 2016, NORI submitted to the ISA its proposed activities for the second five-year period of its exploration contract. NORI indicated that work during such period would focus on:

- reducing project uncertainties and technical risks;
- optimizing the onshore processing and offshore production systems (including increasing performance and reliability); and

- improving project economics, including decreasing estimated capital and operating expenditures as well as increasing projected revenues.

NORI proposed various activities under that submission, which have been undertaken and are continuing to be undertaken. Such work has included improving metal recovery from the hydrometallurgical process then being developed, including studies to improve efficiencies, reduce costs, and increase revenue streams. During the course of this second five-year period, the metallurgical process flow sheet was revised to result in perceived lower-risk and no solid waste, and a pyrometallurgical/hydrometallurgical flowsheet was developed. Studies have also been carried out to identify potential sites for processing plants. A program of offshore campaigns has been and is in the process of being implemented, resulting in a comprehensive environmental baseline study program involving in excess of 100 separate studies from world leading researchers and institutions. This program is intended to inform NORI's ESIA and EMMP submissions to the ISA and assist in its design and plans to manage and mitigate potential environmental impacts from operations.

NORI commenced a pre-feasibility study to analyze technical and economic viability of the collection system and metallurgical process, and revised capital and operating costs.

NORI also proposed and has implemented or will implement a range of activities pertaining to the collector test: (i) identification and ground truthing of areas potentially suitable for the collector test; (ii) confirmation of a collector test site; (iii) commencement of the environmental baseline studies pertaining to the collector EIA program; and (iv) commencing geotechnical studies pertaining to the collector test program. On July 29, 2021, NORI submitted its EIS on the NORI Collector Test for consideration by the ISA.

In 2021, NORI submitted a review of the implementation of the plan of work for the period from 2017 to 2021 to the ISA. The review included a proposed plan of work for the next five-year period from 2022 to 2026. On February 3, 2022, the ISA confirmed that the Secretariat and Commission had reviewed NORI's report and noted that the program of activities for the next five-year period was acceptable. The ISA requested clarification on a few matters and noted that the periodic review would be concluded if the clarifications were received within 30 days. On February 28, 2022, NORI provided the clarification in response to the request by the ISA.

The ISA Council may suspend or terminate the NORI Exploration Contract, without prejudice to any other rights that the ISA may have, if any of the following events should occur:

- if, in spite of written warnings by the ISA, NORI has conducted its activities in such a way as to result in serious persistent and willful violations of the fundamental terms of the NORI Exploration Contract, Part XI of UNCLOS, the 1994 Agreement and the rules, regulations and procedures of the ISA;
- if NORI has failed to comply with a final binding decision of the dispute settlement body applicable to it; or
- if NORI becomes insolvent or commits an act of bankruptcy or enters into any agreement for composition with its creditors or goes into liquidation or receivership, whether compulsory or voluntary, or petitions or applies to any tribunal for the appointment of a receiver or a trustee or receiver for itself or commences any proceedings relating to itself under any bankruptcy, insolvency or readjustment of debt law, whether now or hereafter in effect, other than for the purpose of reconstruction.

Additionally, if the nationality or control of NORI changes or NORI's Sponsoring State, as defined in the Regulations, terminates its sponsorship and NORI does not obtain another sponsor meeting the requirements prescribed in the Regulations, then the NORI Exploration Contract will terminate.

The NORI Sponsorship Agreement

NORI is sponsored by Nauru pursuant to a certificate of sponsorship signed by the Government of Nauru on April 11, 2011. NORI is a Nauruan incorporated entity and is subject to applicable Nauruan legislation and regulations. In 2015, the Nauruan government established the Nauru Seabed Minerals Authority to regulate activities carried out by companies sponsored by Nauru.

Throughout the period of the NORI Exploration Contract, NORI must be sponsored by a State that is party to UNCLOS. If the nationality or control of NORI changes or NORI's Sponsoring State, as defined in the Regulations, terminates its sponsorship, NORI must promptly notify the ISA. In either event, if NORI does not obtain another sponsor meeting the requirements prescribed in the Regulations and fails to submit to the ISA a certificate of sponsorship for NORI in the prescribed form within six months, the NORI Exploration Contract will terminate.

On June 5, 2017, Nauru, the Nauru Seabed Minerals Authority and NORI entered into a sponsorship agreement (the "NORI Sponsorship Agreement") formalizing certain obligations of the parties in relation to NORI's exploration and potential collection of the NORI Contract Area of the CCZ. The NORI Sponsorship Agreement will remain in force for the duration of the 15-year NORI Exploration Contract and will automatically extend for a further 20 years upon NORI reaching the minimum recovery level under an ISA Exploitation Contract, unless earlier terminated by the ISA as a result of NORI's breach of the NORI Exploration Contract or pursuant to its terms. Upon reaching the minimum recovery level within the tenement area, NORI will pay Nauru a seabed mineral recovery payment based on the polymetallic nodules recovered from the tenement area. In addition, NORI will pay an administration fee each year to Nauru for such administration and sponsorship, which is subject to review and increase in the event that NORI is granted an ISA Exploitation Contract.

During exploration, NORI is required to, among other things:

- submit an annual report to the ISA;
- meet certain performance and expenditure commitments;
- pay an annual overhead charge to cover the costs incurred by the ISA in administering and supervising the contract;
- implement training programs for personnel of the ISA and developing countries in accordance with a training program proposed by NORI in its license application;
- take measures to prevent, reduce, and control pollution and other hazards to the marine environment arising from its activities in the CCZ;
- maintain appropriate insurance policies;
- establish environmental baselines against which to assess the likely effects of its program of activities on the marine environment; and
- establish and implement a program to monitor and report on such effects.

NORI is sponsored to carry out its mineral exploration activities in the CCZ by Nauru, pursuant to a certificate of sponsorship signed by the Government of Nauru on April 11, 2011. Sponsorship of an entity requires the sponsoring State to certify that it assumes responsibility for the entity's activities in the CCZ in accordance with UNCLOS. NORI is a Nauruan incorporated entity and is subject to applicable Nauruan legislation and regulations.

The TOML Exploration Contract

In March 2020, we acquired TOML from Deep Sea Mining Finance Limited, providing us with exclusive rights to explore a 74,713 km² area of the CCZ seabed. TOML holds an exploration contract granted by the ISA and sponsored by the Kingdom of Tonga pursuant to the TOML Exploration Contract ("TOML Exploration Contract"). The plan of work was approved by the Council, acting on the recommendation of the LTC, on July 19, 2011. The TOML Exploration Contract was then signed on January 11, 2012 between TOML and the ISA and terminates on January 11, 2027, subject to a potential extension under the terms of the agreement.

[Table of Contents](#)

The TOML Exploration Contract was granted pursuant to the ISA's Regulations, as well as Article 153 of UNCLOS, and formalized a 74,713 km² exploration area. The TOML Exploration Contract includes an initial term of 15 years, which may be extended under the contract, and a program of activities to be completed within the first five-year period of the term. The TOML Exploration Contract also formalized the rights of TOML around future rights. Pursuant to the Regulations, TOML has the priority right to apply for an ISA Exploitation Contract to collect polymetallic nodules in the same area (Regulation 24(2)). The Regulations state that a contractor who has an approved plan of work for exploration only shall have a preference and a priority among applicants submitting plans of work for collection of the same area and resources. Such preference or priority may be withdrawn by the Council if the contractor has failed to comply with the requirements of its approved plan of work for exploration within the time period specified in a written notice or notices from the Council to the contractor indicating which requirements have not been complied with by the contractor. After a hearing process, the Council shall provide the reasons for its proposed withdrawal of preference or priority and shall consider any contractor's response. The decision of the Council shall take account of that response and shall be based on substantial evidence.

In October 2016 TOML submitted to the ISA its proposed activities for the second five-year period of its exploration contract. TOML indicated that work would focus on:

- continued development and collection of environmental baseline data;
- completing pilot testing;
- completing geotechnical studies;
- completing feasibility studies;
- drafting of the first EIS/EMMP; and
- continuing training.

Based on an expectation that the forthcoming environmental regulations pertaining to obtaining an ISA Exploitation Contract were to be completed, TOML submitted a plan that included a substantive program of environmental baseline survey and pilot collection monitoring. It also included fabrication and trials of pilot scale collection equipment, metallurgical test work, and other engineering and marketing studies as well as report drafting for environmental permitting and feasibility study purposes. The designing of TOML's collection system called the Decoupled Underwater Collection Concept ("DUCC") did progress to prefeasibility study state. TOML continued to advance its project design by conducting land-based tests and closing technology gaps in areas not previously piloted. A preliminary collection plan and collection equipment/schedule was completed for the TOML preliminary collection areas, but such plans are now subject to change by TOML.

In 2021, TOML submitted a review of the implementation of the plan of work for the period from 2017 to 2021 to the ISA. The review included a proposed plan of work for the next five-year period from 2022 to 2026. The ISA is currently reviewing TOML's review and proposed plan of work and is expected to provide a response in 2022.

The ISA Council may suspend or terminate the TOML Exploration Contract, without prejudice to any other rights that the ISA may have, if any of the following events should occur:

- if, in spite of written warnings by the ISA, TOML has conducted its activities in such a way as to result in serious persistent and willful violations of the fundamental terms of this contract, Part XI of UNCLOS, the 1994 Agreement and the rules, regulations and procedures of the ISA;
- if TOML has failed to comply with a final binding decision of the dispute settlement body applicable to it; or
- if TOML becomes insolvent or commits an act of bankruptcy or enters into any agreement for composition with its creditors or goes into liquidation or receivership, whether compulsory or voluntary,

- or petitions or applies to any tribunal for the appointment of a receiver or a trustee or receiver for itself or commences any proceedings relating to itself under any bankruptcy, insolvency or readjustment of debt law, whether now or hereafter in effect, other than for the purpose of reconstruction.

Additionally, if the nationality or control of TOML changes or TOML's Sponsoring State, as defined in the Regulations, terminates its sponsorship and TOML does not obtain another sponsor meeting the requirements prescribed in the Regulations, then the TOML Exploration Contract will terminate.

The TOML Sponsorship Agreement

On March 8, 2008, Tonga and TOML entered into the TOML Sponsorship Agreement formalizing certain obligations of the parties in relation to TOML's exploration and potential exploitation of a proposed application to the ISA (subsequently granted) known as the TOML Area. Tonga updated the sponsorship agreement with TOML in September 2021. Unless otherwise terminated by the parties, the term for the TOML Sponsorship Agreement is for the duration of TOML's ISA Exploration Contract and will automatically extend for a further 25 years upon TOML being granted an ISA Exploitation Contract. Upon reaching the minimum recovery level within the tenement area, TOML has agreed to pay Tonga a seabed mineral recovery payment based on the polymetallic nodules recovered from the tenement area. In addition, TOML will pay an administration fee each year to Tonga for such administration and sponsorship, which is subject to review and increase in the event that TOML is granted an ISA Exploitation Contract.

Under ISA requirements contractors are required to submit five-year work programs. The first TOML five-year work program was completed in 2016 and reviewed and accepted by the ISA in late 2016.

For the second five-year period ending in 2021, TOML proposed the following program: (i) continue environmental baseline work; (ii) complete pilot testing; (iii) complete geotechnical studies; (iv) complete feasibility studies; (v) first draft EIS/EMMP; and (vi) continue training. TOML noted that the program was dependent on success at each stage, subject to change based on findings at hand at any particular time and reliant on funding which in turn is dependent to some extent on macro-economic conditions and development with regards to the authority and its stakeholders.

As a result of the financial state of the previous owner of TOML, TOML did not progress at the rate intended until we purchased TOML in March 2020.

TOML plans to collaborate closely with NORI on the development of offshore technology and nodule processing solutions.

Marawa Agreements

On March 17, 2012, our wholly-owned subsidiary, DGE, entered into an Option Agreement (the "Option Agreement") with Marawa and Kiribati. In consideration of the \$250,000 option fee, Marawa granted DGE an option to purchase tenements, as may be granted to Marawa by the ISA or any other regulatory body, for \$300,000, or in consideration of DGE waiving any loan and other debt obligation pursuant to the Services Agreement (as defined below) if a default event occurs. The exercise period for the option is a maximum of 40 years after the date of the execution of the Option Agreement.

On July 26, 2012, the ISA Council approved a plan of work for exploration submitted by Marawa covering the Marawa Contract Area. Marawa is in the process of preparing to submit its 5-year periodic review report to the ISA. Due to uncertainty on the economic potential of the Marawa Contract Area, Marawa is currently considering conducting another exploration campaign to increase the geological knowledge or is considering to seek a new area. Marawa expects to finalize its decision in 2022. Marawa has delayed its 2022 geological and environmental work programs until it determines how it will move forward.

On October 1, 2013, DGE entered into an agreement (the "Services Agreement") with the Republic of Kiribati and Marawa granting DGE the exclusive right for 40 years to carry out exploration and collection in the Marawa Contract Area as well as purchase polymetallic nodules collected from the Marawa Contract Area. The Marawa Exploration Contract was signed on January 19, 2015. Mineral resource definition work began in 2020 for the Marawa Contract Area and we expect to continue undertaking such work in the near future.

DGE has the right to terminate the Services Agreement for convenience at any time at its election by giving written notice to Marawa and Kiribati and such termination shall take effect two months following the date of the termination notice, provided that DGE shall pay to the ISA on behalf of Marawa the fees or payments legally owed to the ISA by Marawa (including the Annual ISA Exploration Fee and ISA Royalties and Taxes) that are outstanding at the date of termination or that are incurred within 12 months of the date of such termination, provided that Marawa shall have an obligation to minimize such fees and payments to the extent practicable after the date of said termination. DGE and Marawa have considered the potential to amend the current contractual arrangements to provide additional mutual benefits in the conduct of operations, though no assurances may be given that any changes will be agreed.

Royalties and taxes

Royalties and taxes payable on any future production from the CCZ will be stipulated in the ISA's exploitation regulations. While the rates of payments are yet to be set by the ISA, the 1994 Implementation Agreement (Section 8(1)(b)) prescribes that the rates of payments "shall be within the range of those prevailing in respect of land-based mining of the same or similar minerals in order to avoid giving deep seabed miners an artificial competitive advantage or imposing on them a competitive disadvantage."

An ad hoc ISA working group has met several times including most recently in February 2020 to discuss a number of potential royalty and taxation regimes supported by modelling conducted by the Massachusetts Institute of Technology. No final recommendations were made. However, a 2% ad valorem royalty increasing to 6% after a period of five years of production was discussed as well as a 1% ad valorem environmental levy. These amounts were used for the economic analysis included in the initial assessment contained in the NORI Technical Report Summary. Additional discussions have considered capping any proposed environmental levy once an agreed total value has been reached and might no longer be collected once sufficient funds are in trust. We can provide no assurances that any such royalties or levies will not be greater than those discussed and could be significantly greater. The road map agreed to in December 2021, has allocated two days of discussion of the development and negotiation of the financial terms during the March 2022 Council session.

Under the NORI Sponsorship Agreement between Nauru and NORI and under the TOML Sponsorship Agreement between Tonga and TOML, upon reaching a minimum recovery level within the tenement areas, NORI and TOML have agreed to pay Nauru and Tonga a seabed mineral recovery payment for polymetallic nodules recovered from the tenement area, annually adjusted (from year 5 of production) on a compounding basis based on the official inflation rate in the United States. In addition, NORI and TOML will pay an administration fee each year to Nauru and Tonga for such administration and sponsorship, which is subject to review and increase in the event that NORI or TOML are granted an ISA Exploitation Contract.

Environmental Regulation

The ISA is mandated through UNCLOS to "preserve and protect the marine environment" while developing the resources within the Area. Given the location of the NORI Contract Area, the ISA is responsible for assessing any ESIA prepared by NORI and for granting the relevant permits.

Between 1998 and 2019, the ISA held workshops and developed a number of documents to provide guidance to contractors with respect to its expectations for responsible environmental management during the exploration and collection phases of mineral development. Regulations for exploration have been established, and environmental standards and guidelines (together with environmental provisions in the Draft Regulations for Exploitation) to apply to operations are currently under development. The ISA held a workshop "towards an ISA environmental management strategy for the Area" in March 2017 in Berlin, Germany. The results of the workshop were published as ISA technical Study 17 (ISA 2017).

The ISA has issued Regulations on Prospecting and Exploration for Polymetallic Nodules (adopted on July 13, 2000, updated on July 25, 2013). The regulations are complemented by the LTC's recommendations for the guidance of contractors on assessing the environmental impacts of exploration. The exploitation regulations on deep-seabed collection will be complemented by various standards and guidelines. The ISA is currently developing these Standards and Guidelines which are expected to be finalized by the LTC and adopted by the Council. The ISA has divided the required standards and guidelines in three phases.

- Phase 1: Standards and guidelines deemed necessary to be in place by the time of adoption of the draft regulations on exploitation.

[Table of Contents](#)

- Phase 2: Standards and guidelines deemed necessary to be in place prior to the receipt of an application of a plan of work for exploitation.
- Phase 3: Standards and guidelines deemed necessary to be in place before commercial mining activities commence in the Area.

Mining Code - Exploitation	Under Development by the LTC	Stakeholder Consultation	Under Consideration for approval by the LTC	Under Consideration by the Council
Exploitation Regulations	[Progress bar from Under Development by the LTC to Under Consideration for approval by the LTC]			underway
Standards & Guidelines	[Progress bar from Under Development by the LTC to Under Consideration for approval by the LTC]			
Phase 1	[Progress bar from Under Development by the LTC to Under Consideration for approval by the LTC]			underway
Phase 2	Target Completion July 2023			
Phase 3	To be completed prior to commercial mining commence			
Benefit Sharing	Research and consultation complete			underway

Ten standards and guidelines have been prepared in Phase 1, provided to stakeholders for comment, reviewed and amended by the LTC and provided to Council for consideration and approval. Approximately, 20 additional standards and guidelines will be drafted as part of the development of Phase 2 in 2022 for stakeholder comment and review. Once the LTC has finalized the standards and guidelines, they will be provided to the Council for review and adoption.

Although the environmental impact review process has not yet been finalized, all contractors have been made aware that the ISA requires the completion of baseline studies and EIA, culminating in an EIS for proposed commercial operations, prior to collection. Guidance for contractors in terms of what will be expected in the EIS has been provided in ISA Technical Study No. 10 (ISA 2012a). The EIS, along with an EMMP, will be required as part of the application for an ISA Exploitation Contract for operations in the CCZ. Environmental impacts of exploration and potential collection activities have been studied, and NORI is working with several of the deep-sea research institutions that are contributing to our environmental and social impact assessment program, consisting of over 100 discrete studies.

NORI’s offshore exploration campaigns have included sampling to support environmental studies, collection of high-resolution imagery, full column physical and chemical oceanographic data and environmental baseline studies. All offshore campaigns to support environmental baseline data collection have been completed. A collector test involving trialing of collector vehicle and riser system is planned for 2022. A key objective of this test is to monitor the environmental impact of the collection system and use these data to forecast the impacts for a full-scale commercial operation. NORI intends to manage the project under the governance of an environmental management system (“EMS”), which is to be developed in accordance with the international EMS standard, ISO 14001:2004. The EMS will provide the overall framework for the environmental management and monitoring plans that will be required.

NORI’s EMMP will specify the objectives and purpose of all monitoring requirements, the components to be monitored, frequency of monitoring, methods of monitoring, analysis required in each monitoring component, monitoring data management and reporting. The EMMP will be submitted to the ISA as part of the ISA Exploitation Contract application.

Through a consultation process initiated by the ISA in 2013 and the feedback that was obtained from multiple stakeholder groups, the environmental permitting process is expected to involve a series of checks and balances with reviews being conducted by the LTC. The recommendations of the LTC will go before the ISA Council, which will then review and, if it deems appropriate, approve the exploitation application.

In addition, the sponsoring State has a responsibility to put in place legislation to ensure the entity it has sponsored complies with UNCLOS and ISA rules and regulations. Nauru implemented the Nauru International Seabed Minerals Act in 2015 which acts as a second layer of legislation with which NORI is required to comply.

To date, NORI's assessment is that it is in compliance with existing exploration permits and contracts. NORI estimates that it is in the middle stages of the exploitation permitting process. In addition to working on key engineering aspects of the project such as designing the nodule collector and the dewatering facility, NORI is also continuing the following tasks:

- delineating nodule mineralization;
- characterizing the nature of the seabed, water column and biology;
- conducting environmental baseline studies and impact assessments;
- characterizing the nature of any materials returned to the environment;
- developing oceanographic and physical information to inform models (e.g., sediment plume models); and
- developing other plans, including the EMMP and the various subordinate plans.

The potential future onshore environmental impacts have not yet been assessed because the processing plant that we expect to create or use through a tolling or other arrangement has not been determined or otherwise has not been designed in sufficient detail, and the location and host country (and hence regulatory regime) has not been confirmed. The planned metallurgical process is expected to generate near-zero solid waste products, and the deleterious elements (for example, cadmium and arsenic) content of the nodules is understood to be very low, indicating that with careful management, the environmental impacts of the processing operation is expected to be low.

Intellectual Property

Our success depends in part upon our ability to obtain and maintain patent protection of our core technology and intellectual property, as well as that of our strategic partners, and particularly that our freedom to operate is not restricted by patents lodged by competitors or other third parties. Moreover, we rely on a combination of trade secret protection, non-disclosure and licensing agreements and trademarks to establish and protect our proprietary intellectual property. To this end, we maintain a portfolio of issued patents and pending patent applications, which relate to offshore collection systems and to the processing of polymetallic nodules for recovering metals. As we rely on a number of patents to establish and protect our intellectual property, we have obtained and filed patent applications in countries throughout North America, Europe and Asia.

We cannot conclusively state that any pending applications, existing or future intellectual property will be definitively useful in protecting or promoting our business and growth plans. Please see the section entitled "*Risk Factors*" for additional information on the risks associated with our intellectual property strategy and portfolio.

COVID-19

In March 2020, the World Health Organization declared the global outbreak of COVID-19 a pandemic. Since then, there have been actions, of varying severity, taken around the world to mitigate and manage the spread of COVID-19. The disparate actions undertaken by local governments to mitigate or manage the spread have had and are expected to continue to have an adverse impact on supply chains and labor markets worldwide. On March 27, 2020, the U.S. enacted the Coronavirus Aid, Relief, and Economic Security ("CARES") Act to provide financial stimulus and support as a result of the initial economic fallout from events related to the COVID-19 pandemic.

As we are a pre-revenue company, the impacts of COVID-19 are relatively smaller than companies with commercial operations. Depending on the duration and evolution of the pandemic and our supply chains and future customers' ability to operate normally, there could be future challenges to our business which we cannot currently foresee. It is critical for our partners to have access to supplies and competent human capital for us to collectively meet our business objectives. As we have seen during the height of the pandemic and continuing regulations in certain countries, many of our contractors and service providers have modified their business practices to limit travel and in-person meetings.

While there are positive signs that the current situation is being managed well in most parts of the world and country-wide restrictions and lockdowns are subsiding, there can be no guarantee that any new COVID-19 variant would not result in reinstating restrictions which may impact our business. If significant portions of our contractors, service providers and partners are unable to work effectively, including due to illness, lockdowns, quarantine measures or other government actions, our current development activities and future operations may be impacted negatively. For instance, the final exploitation regulations were expected to be adopted by the ISA during 2020 but were delayed due to COVID-19.

Offshore, in 2021, we have safely and successfully completed five complex campaigns in our NORI Area D in the CCZ involving crew and scientists departing from and returning to San Diego from around the world. In close coordination with our partner, Maersk, we have implemented rigid quarantining and testing protocols designed to provide a safe COVID-19 free work environment. Onshore, our pilot plant program at third-party facilities has proceeded without COVID-19 related incidents. Our corporate and project development teams have adopted a virtual working environment without a traditional office setting. This means we have been minimally impacted by countrywide lockdowns across the globe. We continue to work and collaborate through virtual channels on an ongoing basis.

We continue to closely monitor the recent developments surrounding the continued spread and potential resurgence of COVID-19 from variants. The COVID-19 pandemic may have an adverse impact on our operations, particularly because of preventive and precautionary measures that our company, other businesses, and governments are taking. Refer to the section entitled “*Risk Factors*” included in this prospectus for more information. We are unable to predict the full impact that the COVID-19 pandemic will have on our future results of operations, liquidity and financial condition due to numerous uncertainties, including the duration of the pandemic and the actions that may be taken by government authorities. However, COVID-19 is not expected to result in any significant changes to our business or our costs in the near term. We will continue to monitor the performance of our business and reassess the impacts of COVID-19.

Human Capital

As of December 31, 2021, we employed thirty-one (31) employees and contractors. None of our staff are covered by collective bargaining agreements.

Diversity and Inclusion. We are committed to attracting, developing and retaining diverse talent that is inclusive of every age, gender, gender identity, race, sexual orientation, physical capability, neurological difference, ethnicity, belief and perspective. Our goal is to develop cultural competency by seeking knowledge, increasing awareness, modeling respect and promoting inclusion. Geographically our staff are located in Tonga, Nauru, United States, Canada, Australia, United Kingdom and United Arab Emirates. Our team is comprised of highly skilled individuals with 61% of our staff holding post-graduate degrees, including 19% who hold a Ph.D. degree. Moreover, 32% of our staff are women and 29% of our staff are racially diverse.

People Engagement. As a company working to pioneer a new industry and new ways of doing things, our success depends on attracting and retaining strong, independent, entrepreneurial, and multi-talented team members capable of dealing with high levels of uncertainty and adversity. Our team is distributed across several continents and several time zones, with remote working being the norm for most of our staff. Despite physical and temporal separation, we maintain a strong sense of cohesion by attracting people who are intrinsically motivated by the company’s purpose and core values, cultivating a flat organizational structure and deep care for each other. We rely on regular management and company meetings, ongoing communication flows across different technology platforms, frequent *ad hoc* video communication and creating opportunities for in-person gatherings. We offer our team members flexible work schedules and autonomy in managing their time while encouraging them to set boundaries between work on our shared mission and their home lives.

Compensation and Benefits. We compensate our staff competitively, striving to be in the 50th-60th percentile of our peers for total compensation and benefits. In addition to salaries, our compensation and benefits program includes annual discretionary bonuses, equity awards, an employee stock purchase plan, a 401(k) contribution/superannuation or RRSP benefit contribution (as applicable jurisdictionally), healthcare and insurance benefits, health savings and flexible spending accounts. Our annual equity compensation is focused on company priorities that we believe create long-term value for our stakeholders.

[Table of Contents](#)

Environment, Health & Safety (EHS). Our EHS vision is to fully integrate environmental, health and safety into our operations, and to create a workplace free of incidents. In 2021, we have relied on the EHS programs of our partners Allseas and until December 2021, Maersk. These all involve EHS systems incorporating thorough planning, risk assessment and disciplined implementation of controls as well as culturally-based safety observations systems like safe act observations and obligation of “stop work if it is unsafe to proceed”. In 2021, the five offshore exploration campaigns have been completed without any health and safety incident and no COVID-19 outbreaks. Since 2011, fifteen NORI campaigns have been completed without any lost-time injury. In addition, construction of the collector test system has involved 416,000 person-hours, without any lost-time injury.

Available Information

Our internet address is <https://themetals.co>, to which we regularly post copies of our press releases as well as additional information about us. Our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and all amendments to those reports, are available to you free of charge through the Investors section of our website as soon as reasonably practicable after such materials have been electronically filed with, or furnished to, the SEC. The SEC maintains an internet site (<http://www.sec.gov>) that contains reports, proxy and information statements, and other information regarding issuers that file electronically with the SEC. We include our website address in this prospectus only as an inactive textual reference. Information contained in our website does not constitute a part of this prospectus or our other filings with the SEC.

Corporate Information

TMC is a corporation existing under the laws of British Columbia, Canada. TMC’s registered office is currently located at 595 Howe Street, 10th Floor, Vancouver, British Columbia, Canada V6C 2T5, and its telephone number is: (604) 631-3115.

Legal Proceedings

On October 28, 2021, a shareholder filed a putative class action against us and certain executives in federal district court for the Eastern District of New York, styled *Caper v. TMC The Metals Company Inc. F/K/A Sustainable Opportunities Acquisition Corp., Gerard Barron and Scott Leonard (“Carper Claim”)*. The complaint alleges that all defendants violated Section 10(b) of the Exchange Act and Rule 10b-5 promulgated thereunder, and Messrs. Barron and Leonard violated Section 20(a) of the Exchange Act by making false and/or misleading statements and/or failing to disclose information about our operations and prospects during the period from March 4, 2021 and October 5, 2021. On November 18, another shareholder filed a putative class action against us in the federal district court for the Eastern District of New York, styled *Phuoc Chan Tran et al. v. TMC the Metals Company f/k/a/ Sustainable Opportunities Acquisition Corp. et al.*, alleging substantially identical claims to the claims made in the Carper Claim. On March 6, 2022, a representative plaintiff was selected. We deny any allegations of wrongdoing and intend to vigorously defend against this lawsuit. There is no assurance, however, that we or the other defendants will be successful in our defense of this lawsuit or that insurance will be available or adequate to fund any settlement or judgment or the litigation costs of this action. A resolution of this lawsuit adverse to us or the other defendants, however, could have a material effect on our financial position and results of operations in the period in which the lawsuit is resolved.

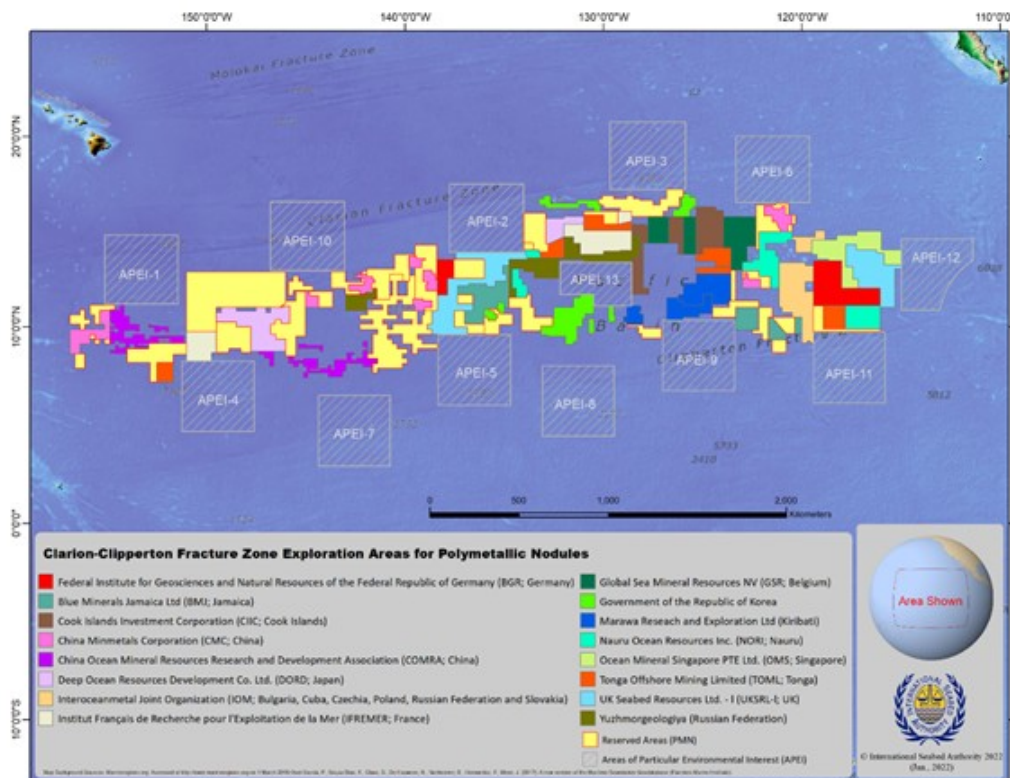

Properties

NORI Contract Area

The information that follows relating to the NORI Contract Area of the CCZ is derived, for the most part, from, and in some instances is an extract from, the NORI Technical Report Summary prepared in compliance with the SEC Mining Rules. Portions of the following information are based on assumptions, qualifications and procedures which are not fully described herein. Reference should be made to the full text of the NORI Technical Report Summary, which has been filed as Exhibit 96.1 to the registration statement of which this prospectus forms a part. The NORI Technical Report Summary is incorporated herein by reference and made a part hereof. In the event that we determine that any modifying factors, estimates and other scientific and technical information in the report materially change, we may update or file a new technical report in the future. The NORI Contract Area is an exploration stage property.

Location of the NORI Area and access

The NORI Contract Area is located within the CCZ of the northeast Pacific Ocean. The CCZ is located in international waters between Hawaii and Mexico. The western-end of the CCZ is approximately 1,000 km south of the Hawaiian island group. From here, the CCZ extends almost 5,000 km east-northeast, in an approximately 600 km wide trend, with the eastern limits approximately 2,000 km west of southern Mexico. The region is well-located to ship nodules to the American continent or across the Pacific to Asian markets. The NORI Contract Area comprises four separate blocks (A, B, C and D) in the CCZ with a combined area of 74,830 km².

NORI Contract Area extents

Area	Minimum Latitude (DD)	Maximum Latitude (DD)	Minimum Longitude (DD)	Maximum Longitude (DD)	Minimum UTM X (m)	Maximum UTM X (m)	Minimum UTM Y (m)	Maximum UTM Y (m)	UTM Zone
A	11.5000	13.0000	(134.5830)	(133.8330)	545,220.4	627,276.0	1,271,339	1,437,255	8

DD — Decimal degrees, UTM — Universal Transverse Mercator map projection

As the CCZ deposit does not include any habitable land and is not near coastal waters, there is no requirement to negotiate access rights from landowners for seafloor collection operations. All personnel and material will be transported to the project area by ship.

See Section 3 of the NORI Technical Report Summary for further specific information of the location of the NORI Contract Area.

Tenements and permits

See Business of TMC-Government Regulations-The NORI Exploration Contract, Business of TMC-Government Regulations-The NORI Sponsorship Agreement and Business of TMC-Government Regulations- International Seabed Authority above for information related to tenements and permits in the NORI Contract Area.

NORI obligations and sponsorship

See Business of TMC-Government Regulations-The NORI Exploration Contract, Business of TMC-Government Regulations-The NORI Sponsorship Agreement above for information related to this agreement in the NORI Contract Area.

Royalties and taxes

See Business of TMC-Government Regulations-Royalties and taxes above for information with respect to our obligations for royalties and taxes in the NORI Contract Area.

History of previous exploration activities in the NORI Contract Area

Prior to the implementation of UNCLOS, many offshore exploration campaigns were completed by international organizations and consortia. A number of at-sea trial collection operations were successfully carried out in the CCZ in the 1970s to test potential collection concepts. These system tests evaluated the performance of self-propelled and several towed collection devices, along with submersible pumps and airlift technology for lifting the nodules from the deep ocean floor to the support vessel. Certain pioneer investors include those entities that carried out substantial exploration in the CCZ prior to the entry into force of UNCLOS, as well as those entities that inherited such exploration data.

NORI Area D was originally explored by Arbeitsgemeinschaft Meerestechnisch Rohstoffe (“AMR”). AMR subsequently joined Ocean Management Inc. (“OMI”). The OMI consortium comprised Inco Ltd (Canada), AMR (Federal Republic of Germany), SEDCO Inc. (US), and Deep Ocean Mining Co. Ltd (Japan). OMI completed a successful trial collection operation in 1978. Hydraulic pumps, an air lift system, and towed collectors were tested in approximately 4,500 m of water. Approximately 800 tonnes of nodules were recovered.

Kennecott consortium (now a division of Rio Tinto) first became seriously interested in seafloor polymetallic nodules in 1962 (Agarwal et al. 1979). In the 1970s, Kennecott developed and tested components and subsystems of a seafloor collection system, and also carried out significant polymetallic nodule metallurgical processing test work.

Using a different system to OMI, Ocean Mining Associates recovered approximately 500 tonnes of nodules during its trial collection in the 1970s.

Between 1969 and 1974, Deepsea Ventures Inc. carried out 16 survey cruises of three to four weeks’ duration each, to define the extent of the polymetallic nodule deposit discovered by them in 1969 in the CCZ. As reported by Deepsea Ventures Inc.:

“These activities included the taking of some 294 discrete samples, including the bulk dredging of some 164 tons of manganese nodules from some 263 dredge stations, 28 core stations and three grab sample stations, cutting of some 28 cores, approximately 1000 lineal miles of survey of seafloor recorded by television and still photography, etc. As a result, the deposit of nodules identified with the discovery has been proved to extend generally throughout the entire area (American Society of International Law, 1975).”

Also active in the CCZ was the Ocean Minerals Company (“OMCO”), comprising Amoco Minerals Co. (United States), Lockheed Missiles and Space Company Inc. (United States), Billiton International Metals BV, and dredging company Bos Kalis Westminster (Netherlands). In a program lasting 16 years, OMCO collected thousands of free-fall grab and box core samples of nodules from its claim area and carried out trial collection operations. Lockheed’s design efforts resulted in over 80 patents, a seafloor production system that consisted of a remote-controlled collector and crusher, a seafloor to surface slurry riser system, the first industrial-scale dynamic positioning system for a vessel, and a metallurgical processing plant.

Upon making an application, the pioneer investors were required to submit sufficient data and information to enable designation of a reserved area based on the estimated commercial value. These sample data provide the basis of a database held by the ISA and were used initially to define the areas of the NORI application.

See Section 5 of the NORI Technical Report Summary for further specific information of the history of previous exploration of the NORI Contract Area.

Geology and sampling

Seafloor polymetallic nodules occur in all oceans, but the CCZ hosts a relatively high abundance of high Ni and Cu grade nodules. The CCZ seafloor forms part of the Abyssal Plains, which are the largest physiographic province on Earth.

The average depth of the seafloor in the Project Area is 3,800 to 4,200 m. Overall, the seafloor slopes at approximately 0.57° (1 m per km) but the Abyssal Plains are traversed by ridges, with amplitude of 50 to 300 m (maximum 1,000 m) and wavelength of 1 to 10 km. The Abyssal Plains are punctuated by extinct volcanoes rising 500 to 2,000 m above the seafloor.

Seafloor polymetallic nodules rest on the seafloor at the seawater — sediment interface. Such nodules are composed of nuclei and concentric layers of manganese and iron hydroxides and are formed by precipitation of metals from the surrounding seawater and sediment pore waters. Nickel, cobalt and copper are also precipitated and occur within the structure of the manganese and iron minerals.

Nodules are abundant in abyssal areas with oxygenated bottom waters and low sedimentation rates (less than 10 cm per thousand years). Nodules generally range from about 1 to 12 cm in their longest dimension. Nodules of 1 to 5 cm are typically the most common in NORI Area D, where they have been classified as Type 1 nodules.

The specific conditions of the CCZ (water depth, latitude, and seafloor sediment type) are considered to be the key controls for the formation of polymetallic nodules.

Information on the mineralization within NORI Area D comprises a combination of sampling undertaken by NORI as well as free-fall grab sampler (“FFG”) and box core sampler (“BC”) data supplied by the ISA at the time of the NORI application and also supplied by the ISA to NORI in 2012. Additional regional data, assembled by the ISA as part of its Geological Model Project during 2008 to 2010 (“ISA 2010”), are available. The data provide significant coverage over NORI Area D and indicate a high abundance of nodules in this region, as has been confirmed by NORI’s exploration.

During the 2018 NORI campaign, 91% of nodules sampled were situated at surface. These include nodules on the surface and nodules with their top surfaces in the upper 1 cm of sediment. A few nodules were found at depth; most of these were usually clustered around the edges of the box core and are considered to have been pushed below surface by the box coring process. Significant nodule abundance below surface was only recorded in one out of 45 samples. The nodules vary in abundance, in some cases touching one another and covering more than 70% of the seafloor. They can occur at any depth, but the highest concentrations have been found on abyssal plains between 4,000 and 6,000 mbsl. Data analysis in Section 9 of the NORI Technical Report Summary shows that nodule abundance variability is significantly higher than metal grades, suggesting that abundance estimation will be the key variable in mineral resource estimation.

NORI completed offshore exploration campaigns in 2012, 2013, 2018, 2019 and 2020. During these campaigns a variety of data was collected including:

- bathymetric mapping of most of NORI Areas A, B and C and all of NORI Area D using a hull-mounted Kongsberg Simrad EM120 12 kHz, full-ocean depth multibeam echo-sounding system (MBES). This system also provided backscatter data with which seafloor characteristics could be interpreted;
- detailed seafloor survey work with an autonomous underwater vehicle (AUV), utilizing an MBES, Side Scan Sonar (SSS), Sub-Bottom Profiler (SBP), and camera payload; and

- a total of 252 box core samples collected using a 0.75 m² box corer, mainly on a 10 km by 10 km square grid were used for resource evaluation.

The nodules in the box cores were collected, and their characteristics measured and recorded in detail. Samples of nodules were collected in duplicate and assayed at two reputable, well-qualified laboratories: ALS and Bureau Veritas. Certified reference material, and blank samples were inserted to provide additional levels of quality control. No significant issues were identified with the assay results.

The backscatter data and the sidescan sonar and seafloor photography indicate strong continuity of nodule abundance across NORI Area D. There is a clear relationship between nodule long axis length and nodule weight and therefore it is possible to estimate nodule abundance from photographs. Several estimation techniques were tested, and methodologies were developed that are suitable for closely-packed (Type 1) and less closely-packed (Type 2 and 3) nodules.

For more information about the NORI exploration campaigns in 2012, 2013, 2018, 2019 and 2020, see Section 7 of the NORI Technical Report Summary.

Mineral resource estimate

The mineral resource was classified on the basis of the quality and uncertainty of the sample data and sample spacing, in accordance with the definitions of “inferred mineral resource,” “indicated mineral resource” and “measured mineral resource” under the SEC Mining Rules.

Mineral resources were estimated using a two-dimensional block model. Estimates of nodule abundance and nickel, manganese, cobalt, and copper grades were performed using kriging. A variety of methods was used to validate the estimates, including conditional simulation. The estimates of nodule abundance were used to calculate the tonnage of the mineral resources.

The bathymetric mapping enabled the interpretation of parts of seafloor that are possibly too steep for recovery of nodules using the systems considered by the NORI Technical Report Summary. Seafloor areas with slopes steeper than 6° were excised from the mineral resource estimate.

The measured mineral resource was assigned to the area within NORI Area D where box-core sampling was conducted on a nominal 7 km by 7 km spacing and infilled with estimates of nodule abundance from seafloor photography to a spacing of 3.5 km by 3.5 km.

The indicated mineral resource was assigned to the area within NORI Area D where box-core sampling was conducted on a nominal spacing of 7 km by 7 km or 10 km by 10 km but without additional photo-estimates of nodule abundance.

The inferred mineral resource was assigned to the areas of abyssal plain in the southeast corner of NORI Area D that are largely unsampled. The volcanic high in the southeast corner was excluded from the mineral resource estimate due to the high level of uncertainty about nodule abundance and grades in this domain.

The mineral resource estimate for NORI Area D at a 4 kg/m² abundance cut-off is set forth below. This cut-off is derived from the estimates of costs and revenues presented in the NORI Technical Report Summary, generalized as follows: 1.7 Mt minimum annual tonnage mined; \$0.25 million/km² for offshore operating costs; 1,036 km² collected area processed; \$95/dry tonne for transport costs; \$119/dry tonne for processing costs; \$15/dry tonne for corporate, general and administrative costs; \$33/dry tonne for ISA and state royalties; 95% recovery of nickel at an assumed price of nickel metal \$16,472/t; 86% recovery of copper at an assumed price of \$6,872/t copper metal; 77% recovery of cobalt at an assumed price of \$46,333/t cobalt metal; and 99% recovery of manganese at an assumed price of \$4.50/dmtu manganese in manganese silicate. The method of calculation for the cut-off determines the minimum average nodule abundance needed during steady state operations such that the revenue minus costs (excluding capital) is greater than zero. Revenue includes metal pricing and metallurgical processing recoveries, and the costs include the collection, transport, processing, corporate costs and royalties.

The estimated mineral resources were determined in 2021 as of December 31, 2020 and also reflect the estimated mineral resources as of December 31, 2021 as none of the mineral resources in these areas were depleted by mining or any other activities.

NORI December 31, 2021 and December 31, 2020 In-Situ Mineral Resource estimate for NORI Area D at 4 kg/m² abundance cut-off

NORI Area	Category	Tonnes (Mt (wet))	Abundance (wet kg/m²)	Nickel (%)	Copper (%)	Cobalt (%)	Manganese (%)	Silicon (%)
D	Measured	4	18.6	1.42	1.16	0.13	32.2	5.13
D	Indicated	341	17.1	1.40	1.14	0.14	31.2	5.46
	Measured +							
D	Indicated	345	17.1	1.40	1.14	0.14	31.2	5.46
D	Inferred	11	15.6	1.38	1.14	0.12	31.0	5.50

Note: Tonnes are quoted on a wet basis and grades are quoted on a dry basis, which is common practice for bulk commodities. Moisture content was estimated to be 24% w/w. These estimates are presented on an undiluted basis without adjustment for resource recovery.

Due to the extremely low variance in the grades and the high metal content of the nodules, a cut-off based on abundance is appropriate for determining the limits of economic exploitation. A cut-off of 4 kg/m² abundance was chosen for the NORI Contract Area, based on the estimates of costs and revenues presented in the initial assessment contained in the NORI Technical Report Summary. The metal prices assumed in the calculation of the cut-off were: nickel metal \$16,472/t; nickel in nickel sulfate \$18,807/t Ni; copper metal \$6,872/t; cobalt metal \$46,333/t; cobalt in cobalt sulfate \$56,920/t Co; manganese in manganese silicate \$4.50/dmtu. The price estimates are long term (2034 – 2046) forecasts provided in a report by CRU International Limited (CRU, October 23, 2020). The Qualified Person considered that this timeframe is reasonable in view of the likely time required to bring the majority of the NORI mineral resources into production.

Sampling of NORI Area D at a spacing of 10 km by 10 km during the 2019 campaign confirmed that the nodules have low variability and high continuity. The mineral resource estimate set forth above is 4 Mt Measured and 341 Mt indicated, and 11 Mt inferred mineral resources. Taking into account the conversion of the majority of inferred to indicated mineral resources, the remaining inferred mineral resource has decreased by 26 Mt as a result of excluding the Volcanic High domain in the south-eastern corner of NORI Area D, due to uncertainty about the occurrence of nodules in this area. The resource estimate is also slightly higher in abundance (5.4% higher), and nickel (6.1% higher), cobalt (5.4% higher) and manganese (2.2% higher) grades than the 2018 estimate.

Comparison of the area covered by inferred, indicated and measured mineral resource for the estimate and the same area in the 2018 model shows that nickel grade has increased by 6% (1.32% to 1.40% Ni) while abundance has increased by 6% (16.0 to 17.0 kg/m²). Mineral resource tonnage has increased by 10% (from 10 to 11 Mt) in the inferred area and 7% (from 320 to 341 Mt) in the indicated area. The positive conversion rates arising from infilling the sampling grid with high-quality box core sample data (rather than extending the area sampled) are exceptionally high compared to the typical outcomes from infill sampling of terrestrial mineral deposits.

While the NORI Technical Report Summary focuses primarily on the exploration operations in NORI Area D, NORI holds another three areas in the CCZ under the same title. These areas (NORI Areas A, B and C) are estimated to contain inferred mineral resources of 510 Mt (wet) at 1.28% Ni, 0.21% Co, 1.04% Cu, 28.3% Mn, at an average abundance of 11 kg (wet)/m² at a 4 kg/m² abundance cut-off (effective date of December 31, 2020). The polymetallic nodule mineralization in NORI Areas A, B and C has similar characteristics to NORI Area D and it is reasonable to assume that the technology proposed in the NORI Technical Report Summary would be suitable for development of these additional areas.

The estimated mineral resources were determined in 2021 as of December 31, 2020 and also reflect the estimated mineral resources as of December 31, 2021 as none of the mineral resources in these areas were depleted by mining or any other activities.

NORI Area A, B and C December 31, 2021 and December 31, 2020 In-Situ Mineral Resource estimate at 4 kg/m² abundance cut-off

NORI Area	Category	Nodule tonnage (Mt (wet))	Abundance (wet kg/m ²)	Ni (%)	Cu (%)	Co (%)	Mn (%)
A	Inferred	72	9.4	1.35	1.06	0.22	28.0
B	Inferred	36	11	1.43	1.13	0.25	28.9
C	Inferred	402	11	1.26	1.03	0.21	28.3

Note: Tonnes are quoted on a wet basis and grades are quoted on a dry basis, which is common practice for bulk commodities. Moisture content was estimated to be 24% w/w. These estimates are presented on an undiluted basis without adjustment for resource recovery.

Information concerning our mineral properties in the NORI Technical Report Summary and in this prospectus includes information that has been prepared in accordance with the requirements of the SEC Mining Rules set forth in subpart 1300 of Regulation S-K. Under SEC standards, mineralization, such as mineral resources, may not be classified as a “reserve” unless the determination has been made that the mineralization could be economically and legally produced or extracted at the time of the reserve determination. As used in this prospectus, the terms “mineral resource,” “measured mineral resource,” “indicated mineral resource” and “inferred mineral resource” are defined and used in accordance with the SEC Mining Rules set forth in subpart 1300 of Regulation S-K. **You are specifically cautioned not to assume that any part or all of the mineral deposits in these categories will ever be converted into mineral reserves, as defined by the SEC.**

You are cautioned that mineral resources do not have demonstrated economic value. Inferred mineral resources have a high degree of uncertainty as to their existence as to whether they can be economically or legally mined. It cannot be assumed that all or any part of an inferred mineral resource will ever be upgraded to a higher category. A significant amount of exploration must be completed in order to determine whether an inferred mineral resource may be upgraded to a higher category. About 97% of the NORI Area D resource is defined in the measured and indicated categories. **Therefore, you are cautioned not to assume that all or any part of an inferred mineral resource exists, that it can be economically or legally mined, or that it will ever be upgraded to a higher category. Likewise, you are cautioned not to assume that all or any part of measured or indicated mineral resources will ever be upgraded to mineral reserves.**

Development plan

NORI proposes to implement the project in multiple phases that will allow the seafloor collection systems to be tested (“Collector Test”) and then nodule collection to be gradually ramped up. The phased approach will facilitate de-risking of the project for relatively low initial capital investment. Additionally, this phased development will allow for an adaptive approach to environmental management providing learning at small-scale which would be applied as the development increases in scale.

The proposed seafloor development phases are as follows:

- The Collector Test is designed to perform proof of concept for the methods of collecting and lifting the nodules while acquiring sufficient data to design a commercial system. The Collector Test would use a converted sixth generation drillship, the *Hidden Gem*. Nodules collected during the test would be stored on the *Hidden Gem* and brought to shore for use in large scale process pilot testing. The test would not demonstrate the transshipment of nodules to a shore-based facility.
- Project Zero would be an extension of the Collector Test using an upgrade of the *Hidden Gem* to produce a sufficient and continuous quantity of nodules to support a relatively small commercial operation of about 1.3 Mtpa (wet) nodules delivered to a shore-based facility. This operation would demonstrate a more continuous collection operation at a larger scale than the Collector Test and would demonstrate the transshipment of nodules to a processing facility. It would also allow for the implementation and testing of adaptive management systems to ensure environmental compliance.
- Project One would increase production in a further three steps: 1) introduction of a second converted drillship (Drill Ship 2) with a capacity of up to 3.6 Mtpa (wet), 2) a further upgrade of the *Hidden Gem* to up to 3.6 Mtpa (wet) and 3) construction of a new purpose-built production support vessel (Collector Ship 1) with capacity of up to 8.2 Mtpa (wet). Project One would benefit from lessons learned on the Collector Test and Project Zero.

- The processing of the polymetallic nodules would also be ramped up in phases:
- In Project Zero, NORI proposes to toll-treat polymetallic nodules at existing RKEF smelters, utilizing excess industry capacity. NORI advises there is significant interest from many parties in China to utilize RKEF plants which may become stranded as a result of the Indonesian government nickel laterite ore export ban restricting supply of the nickel laterite feedstock that they currently utilize. These RKEF plants were originally built to convert nickel laterite to nickel pig iron and could be converted to smelt polymetallic nodules.
- In Project One, a purpose-built process plant would be constructed, including pyrometallurgical and hydrometallurgical circuits. Nodule production would be increased in phases by treatment in this new plant.

Collection methods

The main items of offshore infrastructure are the nodule collector vehicles, the riser, and three production support vessels (“PSV”): *Hidden Gem*; Drill Ship 2; and Collector Ship 1. Collector Ship 1 is intended to be supported by a collector support vessel.

The nodules are intended to be collected from the seafloor by self-propelled, tracked, collector vehicles. No rock cutting, digging, drill-and-blast, or other breakage will be required at the point of collection. The collectors are intended to be remotely controlled and supplied with electric power via umbilical cables from the PSV. The collectors are intended to traverse the seabed at a speed of approximately 0.5 m/s. Suction dredge heads on each collector are expected to recover a dilute slurry of nodules, sediment, and water from the seafloor. Each collector is expected to yield about 254 t/hr (dry) nodules. A hopper on each vehicle is expected to separate sediment and excess water, which is expected to pass out of the hopper overflow, from the nodules, which is planned to be pumped as a higher concentration slurry via flexible hoses to a riser.

The riser is a steel pipe through which nodules are planned to be transferred to the surface by means of an airlift. The riser is intended to consist of three main sections. The lower section is expected to carry the two-phase slurry of nodules and water from the collectors to the airlift injection point. The mid-section is expected to carry a three-phase mixture of slurry and air. This section will also include two auxiliary pipes: one to carry the compressed air for the airlift system, and one to return water from dewatering of the slurry to its subsea discharge point. The upper section of riser is expected to have a larger diameter to account for the expansion of air in the airlift.

The airlift is intended to work by lowering the average density of the slurry inside the riser to a level lower than seawater. The difference between the hydrostatic pressure of the seawater at depth and the pressure caused by the weight of the low-density three-phase slurry column inside the riser is expected to force the slurry column to rise. The energy to achieve the lift is planned to be supplied by compressors housed on the PSV, which are planned to be capable of generating very high air pressures — up to 15 MPa.

The PSVs are planned to each support a RALS and its handling equipment, and to house the airlift compressors, collector vehicle control stations, and material handling equipment. All power for offshore equipment, including the nodule collecting vehicles, is intended to be generated on the PSVs. The PSVs are intended to be equipped with controllable thrusters and to be capable of dynamic positioning (DP), which should allow the vessels and risers to track the collectors. The Collector Ship 1 PSV is expected to be similar in size to an Aframax or New Panamax class of tanker, displacing approximately 103,000 t, and housing a crew of around 120 personnel. Nodules are planned to be discharged from the RALS to the PSVs, where they are expected to be dewatered and temporarily stored or transferred directly to a transport vessel.

A separate collector support vessel is expected to remain at sea to support Collector Ship 1. It is expected to be configured as a subsea support platform, as commonly used in the oil industry, with a displacement of around 17,250 t. The function of the collector support vessel will be to facilitate collector maintenance and repair.

The NORI Technical Report Summary assumes that transportation of nodules will be by chartered vessels, with deadweight capacities of 35,000 to 100,000 tonnes. The vessels are expected to require dynamic positioning capability to enable them to be loaded at sea alongside the PSV. Hydraulic offloading of the nodules from the PSV to the transport ships is assumed in the NORI Technical Report Summary, but future studies will confirm the offloading mechanism.

The overall nodule collector efficiency is estimated at 80%. The recovery value is based upon test work conducted in the 1970s. Nodule recovery efficiency is the product of nodule entrainment efficiency, subsea concentrator recovery, and dewatering system efficiency. The estimate of dewatering recovery used in the NORI Technical Report Summary is higher than indicated by the 1970s test work because data that has come to light recently suggests the amount of breakup during lifting the nodules up the RALS may be significantly less than previously assumed (Kennecott (1978), DRT (2015)).

Expected Mineral Resource modifying factors

Modifying factors	Value	Description
Resource area efficiency	92%	The resource area efficiency factor is defined as the width of the collector divided by the width of the collector path. A 0.5 m undisturbed strip is to be left either side of the collector. For a 12 m wide collector, the resource area efficiency is calculated as 12/13.
Collector pick-up efficiency	90%	This is the percentage of nodule mass passed over by the collector that is picked-up by the collector head.
Collector underflow efficiency	95%	This is the percentage of nodule mass that is picked-up that is passed to the collector underflow.
Nodule attrition	0%	This is the percentage of mass of nodule lost through attrition from the seafloor to trans-shipment. It is included in the trans-shipment efficiency.
Trans-shipment efficiency	93%	This is the percentage of nodule mass transferred from the production vessel to trans-shipment.
Overall collector efficiency	80%	This is the percentage of nodule mass passed over by the collector that is delivered to the transport vessel. It includes losses in the pick-up, overflow, attrition and trans-shipment (90%*95%*100%*93%).
Overall resource recovery factor	73%	Is the product of the resource area efficiency * collector pick-up efficiency * collector under flow efficiency * (1 — nodule attrition (%)), * trans-shipment efficiency (92%*90%*95%*100%*93%).

For more information on polymetallic nodule collection methods, see Section 13 of the NORI Technical Report Summary.

Mineral processing and metallurgical testing

A combined pyro-metallurgical and hydro-metallurgical flowsheet was evaluated for the initial assessment included in the NORI Technical Report Summary. Similar flowsheets were investigated at various times over the last several decades. NORI has undertaken bench-scale test-work and is in the process of completing pilot-scale testing of the proposed flowsheet. This work has confirmed or improved the flowsheet that was initially developed from extensive information available in the literature.

For Project Zero, NORI proposes to toll treat polymetallic nodules at existing RKEF smelters. During Project One, NORI proposes the progressive construction and expansion of a new pyrometallurgical and hydrometallurgical process plant for the recovery of battery-grade nickel and cobalt sulfate powder, copper cathode and manganese silicate, from polymetallic nodules. This is expected to allow for the proportion of toll treatment to be reduced.

Four RKEF lines and two hydrometallurgical refineries are expected to be required to meet our expected production demand.

The pyrometallurgical front-end of the plant is expected to use RKEF lines that calcine and smelt the nodules to form an alloy. The alloy is then expected to be sulphidized to form a matte and then partially converted in a Peirce-Smith converter operation to remove iron. The matte from the sulphidation step is planned to then be sent to the hydrometallurgical refinery. The pyrometallurgical process is expected to be similar to that successfully used to process some nickel laterite ores.

The hydrometallurgical refinery concept is based on a sulfuric acid leach flowsheet. A two-stage leach would be used to produce copper cathode and a pregnant leach solution rich in nickel and cobalt, while low in copper. Further processing of the pregnant leach solution is based on mixed-sulphide precipitate processing flowsheets employing solvent extraction. The final production of battery-grade nickel and cobalt sulfates is expected to use crystallization.

The pyrometallurgical process is expected to generate a manganese silicate stream that we believe could be sold to the manganese industry and small converter slag stream that we believe could be sold for industrial applications. No value has been ascribed to converter slag in the NORI Technical Report Summary. The hydrometallurgical plant is expected to produce an ammonium sulfate by-product for sale to the fertilizer industry. Thus, together with the ability to recycle other hydrometallurgical side-streams to the pyrometallurgical process, the flowsheet is planned to have neither tailings ponds nor permanent slag repositories and should not generate substantial waste streams.

The average targeted processing rate for the new processing plant at full capacity is expected to be 6.4 Mtpa of nodules (dry basis). The location and host country of the processing operation has not yet been determined. Engineering design has not yet been undertaken. Expected metallurgical recoveries are summarized in the table below.

Process Step	Nickel Recovery (%)	Cobalt Recovery (%)	Copper Recovery (%)
Final matte	94.6 %	77.4 %	86.5 %
Hydrometallurgical products before recycle	98.9 %	98.0 %	96.2 %
Recycled residue	94.6 %	77.4 %	86.5 %
Overall recovery	94.6 %	77.2 %	86.2 %

In addition to the above base metals, 98.9% of the manganese contained in the feed is expected to be recovered in the manganese silicate product, containing 52.6% MnO. Approximately 7.3 Mt of manganese silicate is expected to be produced per annum (from steady state operation from 2030 onwards).

For more information on mineral processing and metallurgical testing, see Section 14 of the NORI Technical Report Summary.

Environmental studies, permitting, community, or social impact

Historically, a significant amount of technical work has been undertaken within the CCZ by the contractors under the ISA and a significant body of information has been acquired during the past 40 years on the likely environmental impacts of collecting nodules from the seafloor.

NORI's offshore exploration campaigns have included sampling to support environmental studies, collection of high-resolution imagery and environmental baseline studies. Environmental campaigns in 2021 resulted in completion of the offshore environmental data collection required for the ESIA baseline studies.

NORI has commenced the ESIA process in support of an application for an exploitation contract for the commercial collection of deep-sea polymetallic nodules. A comprehensive program of metocean and biological data acquisition is largely complete, required to characterize the baseline conditions at a designated Collector Test site and control sites in the NORI Contract Area.

NORI intends to manage the project under the governance of an Environmental Management System ("EMS"), which is to be developed in accordance with the international EMS standard, ISO 14001:2004. The EMS will provide the overall framework for the environmental management and monitoring plans that will be required.

An EMMP will be required. The plan will specify the objectives and purpose of all monitoring requirements, the components to be monitored, frequency of monitoring, methods of monitoring, analysis required in each monitoring component, monitoring data management and reporting. The plan will be submitted to the ISA as part of the ISA Exploitation Contract application. This plan will involve an ecosystem approach incorporating an adaptive management system.

The social impacts of the offshore operation are expected to be positive. The CCZ is uninhabited by people, and there are no landowners associated with the CCZ. No significant commercial fishing is carried out in the area. The project is expected to provide a source of revenue to our sponsor country, Nauru, and the ISA.

The onshore environmental and social impacts have not yet been assessed because the process plant has not been designed in detail, and the location and host country (and hence regulatory regime) not confirmed. The planned metallurgical process will not generate solid waste products, and the deleterious elements (for example, cadmium and arsenic) content of the nodules is very low, indicating that with careful management the environmental impacts of the processing operation could be very low.

For more information on environmental studies, permitting and social or community impact, see Section 17 of the NORI Technical Report Summary.

Economic analysis

We have developed in-house a financial model based on estimates of future cash flows derived from extraction of nodules from the NORI Area D project. AMC reviewed the logic, input assumptions and integrity of the calculations and forecasts. The financial model is for NORI Area D only, which is at a preliminary level of planning and design. We do not believe there have been any material changes to this model since AMC's review.

For the initial assessment, the offshore cost estimates were developed based upon the guidelines of the AACE (Association for the Advancement of Cost Engineering) International Recommended Practice No. 18R-97. Based on engineering studies performed previously by Deep Reach Technology (DRT) for Deep Green Resources and the experience in trial mining of deep-sea nodules by DRT personnel, the cost estimate was considered to be a class 4. Offshore capital costs were estimated to accuracy levels of -30% +40%. Onshore capital costs were estimated according to an AACE Class 5 level of accuracy (-35% +50%). A contingency of 25% was applied to the offshore and onshore capital cost estimates. The collection plan considered in the NORI Technical Report Summary contemplates a 23-year production period. The expected production period is within the expected duration of a NORI Area D ISA Exploitation Contract which would be thirty (30) years (with possible extensions by periods of ten (10) years) as outlined in the current draft of the regulations for exploitation of mineral resources in the CCZ (ISBA/25/C/WP.1).

After the initial 23-year period, substantial resources will remain in the other NORI Areas that could support future collection (combined inferred mineral resource in NORI Areas A, B and C of 510 Mt (wet) at 1.28% Ni, 0.21% Co, 1.04% Cu, 28.3% Mn, at an average abundance of 11 kg (wet)/m²). The proposed project schedule is shown in the Gantt chart in Figure 19.1 of the NORI Technical Report Summary.

In Project Zero, NORI expects to toll treat the nodules in third-party pyrometallurgical plants and sell the RKEF products into the alloy market. This will be expected to generate revenue while the pyrometallurgical and hydrometallurgical facilities are planned to be built.

In Project One, NORI expects to stage the construction of its multiple pyrometallurgical and hydrometallurgical lines to flatten out capital expenditure requirements. Nodule production is expected to be directed preferentially to the NORI pyrometallurgical plants as this is expected to be the lowest operating cost option. Whenever these facilities are at maximum capacity (particularly during the ramp-up phase), the surplus nodules are expected to be sent for toll treatment.

NORI expects that it will ensure that its own hydrometallurgical refineries are filled up to maximum capacity, as this is expected to produce the highest value products. Whenever its own hydrometallurgical refineries are at full capacity, NORI expects to sell the surplus product from its pyrometallurgical plant directly to the matte market. While the matte is not as valuable as the refined products from the hydrometallurgical plant (nickel sulfate, cobalt sulfate, and copper cathode), it still provides a consistent revenue stream and assists for periods when the refineries are at full capacity.

Some of the alloy production from toll treatment of NORI nodules are expected to be shipped to the NORI hydrometallurgical plants to make use of spare capacity. This will require the alloy from the third-party RKEF to be sulphidized prior to hydrometallurgical treatment.

Based on preliminary discussions with potential buyers, NORI believes that there is sufficient demand for the alloy and matte over the life of the project.

The analysis was performed on a 100% ownership basis and excludes consideration of financing costs and forward metal sales. The analysis assumes the economic parameters listed in the table below.

Assumed Economic Inputs

Parameters	Units	Values
Hydrometallurgical plant Ni recovery	%	94.6 %
Mn recovery	%	98.9 %
Hydrometallurgical plant Cu recovery	%	86.2 %
Hydrometallurgical plant Co recovery	%	77.2 %
Pyrometallurgical plant Ni recovery	%	96.8 %
Pyrometallurgical plant Cu recovery	%	93.3 %
Pyrometallurgical plant Co recovery	%	92.7 %
Mn silicate grade	%	40.0 %
Cu cathode grade	%	99.9 %
Payability of Cu content in cathode	%	100 %
Nodule moisture content	%	24 %
Onshore tax rate	% of taxable income	20 %
Average offshore tax (to ISA)	% of taxable income	6.7 %

Commodity Prices

Project revenues will come from the following sources:

- a nickel sulfate product;
- a copper cathode product;
- a cobalt sulfate product;
- a manganese silicate product;
- an ammonium sulfate product;
- a nickel alloy product containing copper and cobalt; and
- a matte product from the NORI pyrometallurgical plants containing nickel, copper and cobalt, which would be sold to the matte market.

NORI has used the following payable percentages for the alloy:

- Nickel: 80% of in-situ value in the alloy;
- Copper: 40% of in-situ value in the alloy; and
- Cobalt: 80% of in-situ value in the alloy.

The following estimates for treatment charges and refining charges for the alloy product were used in the NORI financial model:

- a refining charge of \$1,697/tonne of contained nickel in the alloy;
- a refining charge of \$800/tonne of contained nickel in the alloy;

[Table of Contents](#)

- a refining charge of \$6,700/tonne of contained nickel in the alloy; and
- a treatment charge \$300/tonne of alloy.

For the matte product, NORI has used a payables figure of 83% of the market metal price of nickel, copper and cobalt. The metal recoveries for the matte and alloy are those from the pyrometallurgical plant, whilst the refined products (nickel sulfate, copper cathode and cobalt sulfate) are from the hydrometallurgical refinery metal recoveries.

The prices forecast by CRU and adopted for use in the economic analysis were derived from a report prepared by CRU dated October 23, 2020 and are listed in the table below. The Qualified Person considered the metal price assumptions underpinning the analysis to be reasonable.

Commodity prices

	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034 – 2046

Production schedule

The production schedule on which the economic analysis is based was developed on an annual basis. The Qualified Person cautioned that a prefeasibility study has not been undertaken and that the seafloor production schedule is preliminary in nature and should not be interpreted as a mineral reserve. Approximately 96% of the mineral resource within NORI Area D is classified as indicated and a further 1% is classified as measured resource. The life of mine (“LOM”) production sequence includes 6 Mt (wet) of nodules that are classified as inferred mineral resources. This is approximately 2% of the total LOM production.

The production schedule assumes staged operation initially of the *Hidden Gem*, then Drill Ship 2 and finally Collector Vessel 1, as outlined in Section 16.1 of the NORI Technical Report Summary.

The nodule metal grades and nodule abundance varying annually according to the LOM schedule. The grades and nodule abundance for the mine plan were derived from a preliminary production schedule developed by AMC as outlined in Section 16.7 of the NORI Technical Report Summary. The higher abundance areas were targeted by the production schedule. The metal grades and abundance used in the schedule (the “IA”) are compared to the averages (of all mineral resource categories) for NORI Area D in the table below.

Comparison of IA mine plan to Mineral Resource for NORI Area D

	Mineral Resource in NORI Area D (all categories)	Seafloor production plan	Difference (%)
Tonnage (Mt wet)	356	254	71 %
Nodule abundance (kg/m ²)	17.0	16.9	99 %
Ni grade (%)	1.40	1.4	100 %
Mn grade (%)	31.2	31.0	99 %
Cu grade (%)	1.14	1.1	100 %
Co grade (%)	0.14	0.14	98 %

The production ramp-up discussed in Section 17 of the NORI Technical Report Summary was adopted for the production schedule. The Qualified Person considered the assumptions underpinning the initial assessment and economic analysis to be reasonable.

Capital and operating costs

The capital cost estimates for the Project are summarized below. Pre-project items include data gathering and studies that will occur prior to construction. Offshore project costs include the procurement and integration of the PSVs, the collector support vessel, the fabrication of the collectors, and the RALS. Onshore project costs consist principally of the construction of the minerals processing pyrometallurgical plant and hydrometallurgical refinery. Sustaining costs are for both onshore and offshore assets, and closure costs are principally for rehabilitation of the onshore minerals processing site.

Section	Cost estimate (\$ million)
Pre-project costs	237
Project costs	
Offshore project costs	
Project Zero	204
Project One	2,244
Total	2,448
Onshore project costs	
Project One	4,786
Total	4,786
Total project costs	7,234
Sustaining capital costs (onshore and offshore)	2,637
Closure costs	500
Total	10,607

Operating costs have been estimated at \$1.8 billion per annum during steady state production (from 2030 onwards). Expenditures of a total of \$37.5 billion over the life of the project on operating costs is expected. Onshore processing is the most significant operating cost.

Average operating cost estimates during steady state operation (from 2030 onwards)

Section	Average Operating Cost over Life of Mine (\$ million pa)	Average Unit Cost (/t – wet tonne nodules recovered)	Average Unit Cost (/t – dry tonne processed)
Offshore	\$ 240.74	\$ 19.31	\$ 25.40
Shipping	\$ 254.37	\$ 20.40	\$ 26.84
Onshore	\$ 1,286.19	\$ 103.14	\$ 135.71
Other	\$ 25.00	\$ 2.00	\$ 2.64
Total	\$ 1,806.31	\$ 144.85	\$ 190.59

For more information on capital and operating costs, see Section 18 of the NORI Technical Report Summary.

Cash flows analysis

The economic analysis set forth in Section 19 of the NORI Technical Report Summary presents a post-tax, real (uninflated) cash flows analysis. The valuation date is January 1, 2021 and we do not believe there have been any material changes to the assumptions used in this valuation through the end of December 2021. The analysis was performed on a 100% ownership basis and excludes consideration of financing costs and forward metal sales. The initial assessment indicates a positive economic outcome. Undiscounted post-tax net cash flows of \$30.6 billion is expected. An internal rate of return of 27% has been estimated from the financial model. Discounted cash flow analysis of unleveraged real cash flows, discounting at 9% per annum, indicates a pre-tax project net present value (NPV) of \$11.2 billion and a post-tax project NPV of \$6.8 billion, which includes the LOM production of polymetallic nodules that are presently classified as inferred mineral resources, representing approximately 2% of the total LOM production. Excluding the inferred mineral resources from the economic analysis, the post-tax project NPV is estimated at \$6.7 billion, which is not a significant difference from the economic analysis that includes the inferred mineral resources. The project reaches its lowest cumulative undiscounted cash flow figure of \$4.0 billion in 2026. Undiscounted payback period is 6.6 years after commencement of production.

The total cash flows are summarized below:

Cash flow item	Value (\$ million)
Ni revenue	\$ 44,106
Mn revenue	\$ 26,785
Cu revenue	\$ 12,685
Co revenue	\$ 11,075
Ammonium sulfate revenue	\$ 439
Total revenue	\$ 95,090
Pre-project capital	\$ 237
Offshore construction	\$ 2,448
Onshore construction	\$ 4,786
Offshore sustaining capital	\$ 1,418
Onshore sustaining capital	\$ 1,219
Closure costs	\$ 500
Total capital	\$ 10,607
Offshore operating costs	\$ 5,154
Shipping costs	\$ 5,266
Onshore operating costs	\$ 26,544
Corporate costs	\$ 560
Total operating costs	\$ 37,524
Royalties	\$ 7,195
Onshore tax	\$ 9,123
Taxes and royalties	\$ 16,318
Net undiscounted cash flow	\$ 30,641

Project revenues are expected to come from the following sources: (a) a nickel sulfate product; (b) a copper cathode product; (c) a cobalt sulfate product; (d) a manganese silicate product; (e) an ammonium sulfate product; (f) a nickel alloy product containing copper and cobalt; and (g) a matte product from the NORI pyrometallurgical plants containing nickel, copper and cobalt which would be sold to the matte market.

The discounted cash flows and progressive NPVs are shown below:

The date of the investment decision is expected to be on or around June 30, 2023. The analysis assumes NORI spending of \$237 million on pre-project activities between 2021 (which were progressed in 2021) and 2024. The future value of the project on June 30, 2023 (after the pre-project expenditure is sunk and time has elapsed) is expected to be \$8.6 billion and the initial rate of return from that point is expected to be 29%.

The sensitivity of project economics to changes in the main variables was tested by selecting high and low values that represent a likely range of potential operating conditions. The variables with the biggest negative impact on NPV are all metal prices, total OPEX, collector speed, nickel sulfate price and development capex. In general, revenue drivers have the biggest impact, followed by OPEX variables and then CAPEX variables.

Tornado diagram of NPV sensitivity to variables

The initial assessment is preliminary in nature, and further planning, engineering studies, design, cost estimation and seafloor tests are required before mineral resources can be converted to mineral reserves. There is no certainty that the proposals and results presented in the initial assessment will be realized. A prefeasibility study has not yet been undertaken. Mineral resources are not mineral reserves and do not have demonstrated economic viability.

The initial assessment included in the NORI Technical Report Summary indicates that the NORI Area mineral resource is potentially economic. The Qualified Person recommended that further data gathering, analysis, design and cost estimation be undertaken to advance the project.

Internal controls and data verification

The original assay sheets for the individual samples collected by the pioneer investors from within the NORI Area are not available for auditing against the values in the database. We, AMC and NORI have not had access to the original assay sheets for the individual samples that are within the CCZ, and the quality control procedures used by the laboratories and the ISA. However, the consistency between the abundance and grade data collected by the pioneer investors, as presented in Section 9.1 of the NORI Technical Report Summary, supports the contention that the quality of the pioneer investor data is satisfactory.

It is also reasonable to infer that the pioneer investor data are of sufficient quality for resource estimation because the ISA is an independent agency with significant accountability under the UNCLOS. Part of its mandate is the receipt and storage of seafloor sampling data suitable for the estimation of nodule resources and the legally binding award of licenses. It is reasonable to assume that a reasonable level of care was applied by the ISA.

Data collected by NORI is well-documented and was subject to satisfactory quality assurance/quality control processes. Documentation verified by the Qualified Person includes photographs, daily exploration reports, digital logging sheets and original assay reports. In the opinion of the Qualified Person, the NORI data was of high quality and suitable for estimation of measured mineral resources.

Assaying of nodules collected by NORI in 2012, 2013, 2018, and 2019 confirm the mean grades of the historical grab samples and support the contention that the quality of the pioneer investor data is satisfactory for inclusion in resource estimation. The main limitation with the pioneer investor data is the likelihood that some of the abundance values were too low, due to loss of nodules from the FFG. Estimates of abundance that include pioneer investor data are therefore likely to be conservative.

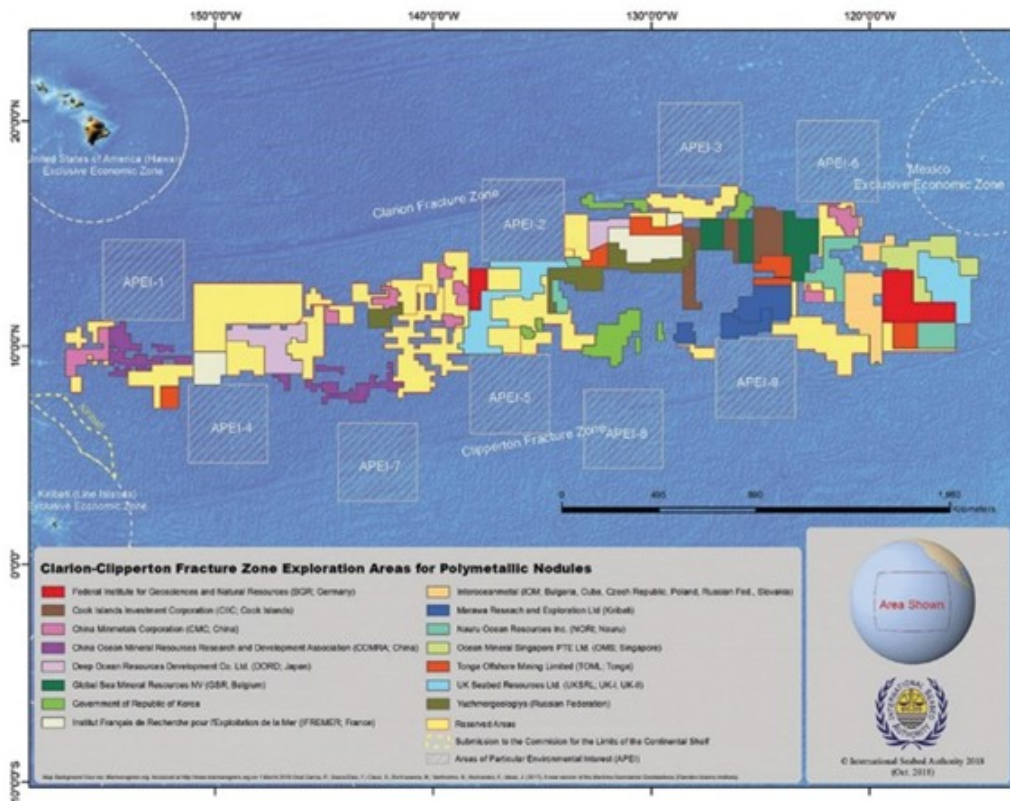

For more information about quality control/quality assurance and data verification, see Section 8 and Section 9 of the NORI Technical Report Summary.

TOML Contract Area

The information that follows relating to the TOML Contract Area of the CCZ is derived, for the most part, from, and in some instances is an extract from, the TOML Technical Report Summary prepared in compliance with the SEC Mining Rules. Portions of the following information are based on assumptions, qualifications and procedures which are not fully described herein. Reference should be made to the full text of the TOML Technical Report Summary, which has been filed as Exhibit 96.2 to the registration statement of which this prospectus forms a part. In the event that we determine that any of modifying factors, estimates and other scientific and technical information in the report materially change, we may update or file a new technical report in the future. The TOML Contract Area is an exploration stage property.

Location of the TOML Contract Area and access

The TOML Area is located within the CCZ of the northeast Pacific Ocean. The CCZ is located in international waters between Hawaii and Mexico. The western-end of the CCZ is approximately 1,000 km south of the Hawaiian island group. From here, the CCZ extends over 4,500 km east-northeast, in an approximately 600 km wide trend, with the eastern limits approximately 2,000 km west of southern Mexico. The region is well-located to ship nodules to the American continent or across the Pacific to Asian markets. The TOML Contract Area comprises six separate blocks (A through F) in the CCZ with a combined area of 74,713 km².

TOML Contract Area extents

Area	Minimum Latitude (DD)	Maximum Latitude (DD)	Minimum Longitude (DD)	Maximum Longitude (DD)	Minimum UTM X (m)	Maximum UTM X (m)	Minimum UTM Y (m)	Maximum UTM Y (m)	UTM Zone
A	7.167 N	8.167 N	151.667 W	152.510 W	553,972	647,187	792,205	902,968	05N

DD — Decimal degrees, UTM — Universal Transverse Mercator map projection

The CCZ lies between Hawaii and Mexico and is accessible by ship from various ports in the United States and South America. As the CCZ deposit does not include any habitable land and is not near coastal waters, there is no requirement to negotiate access rights from landowners for seafloor collection operations. All personnel and material will be transported to the project area by ship.

See Section 3 of the TOML Technical Report Summary for further specific information of the location of the TOML Contract Area.

Tenements and permits

See Business of TMC-Government Regulations-The TOML Exploration Contract, Business of TMC-Government Regulations-The TOML Sponsorship Agreement and Business of TMC-Government Regulations- International Seabed Authority above for information related to tenements and permits in the TOML Contract Area

TOML obligations and sponsorship

See Business of TMC-Government Regulations-The TOML Exploration Contract, Business of TMC-Government Regulations-The TOML Sponsorship Agreement above for information related to this agreement in the TOML Contract Area.

Royalties and taxes

See Business of TMC-Government Regulations-Royalties and taxes above for information with respect to our obligations for royalties and taxes in the TOML Contract Area.

History of previous exploration activities in the TOML Area

Prior to the implementation of UNCLOS, many offshore exploration campaigns were completed by international organizations and consortia. A number of at-sea trial collection operations were successfully carried out in the CCZ in the 1970s to test potential collection concepts. These system tests evaluated the performance of a self-propelled and several towed collection and collection devices, along with submersible pumps and airlift technology for lifting the nodules from the deep ocean floor to the support vessel. Certain pioneer investors include those entities that carried out substantial exploration in the CCZ prior to the entry into force of UNCLOS, as well as those entities that inherited such exploration data.

Exploration and development efforts in the CCZ started in the 1960s by state sponsored groups from Russia, France, Japan, Eastern Europe, China, Korea and Germany. Several commercial consortia also explored between the 1960s and the 1980s and in some instances their descendants are still involved to the present day. No commercial collection operations have yet been established in the CCZ. However, a variety of collectors, pick-up systems, and metallurgical processing flow sheets were tested, and several integrated “demonstration scale” systems operated in the CCZ for several months in the late 1970s. Processing test-work has encompassed a variety of hydrometallurgical and pyrometallurgical flow sheets, usually with good results.

Six exploration groups are known to have surveyed areas within the TOML Contract Area and collected samples of polymetallic nodules. Much of this work overlapped as it predated the signing of the Law of the Sea. These include the Japanese group (DORD), the South Korean group (KORDI), the Russian Federation group (Yuzhmoregeologiya), the French group (Ifremer), the German group (FIGNR or BGR), and the consortium, Ocean Minerals Company (OMCO). The timing and location (ISA, 2003) of the OMCO sampling is known but the results are not available outside of ISA published contour maps. Virtually all the samples in the TOML tenement area were obtained by FFG samplers, although a few results from box corers (BC) were also included.

See Section 5 of the TOML Technical Report Summary for further specific information of the history of previous exploration of the TOML Contract Area.

Geology and sampling

Seafloor polymetallic nodules occur in all oceans but the CCZ hosts a relatively high abundance of nodules. The CCZ seafloor forms part of the Abyssal Plains, which are the largest physiographic province on Earth. This mineral field is essentially a single mineral deposit almost 5,000 km in length and up to 600 km wide. The size and level of uniformity of mineralization is unmatched by any mineral deposit of similar value on land. The mechanism of formation of the nodules is interpreted to be essentially identical across the entire CCZ, with only minor local variations. Consequently, there is relatively little difference between the size, shape or metal content of the nodules from one area to another. Figure 6.9 to Figure 6.11 of the TOML Technical Report Summary illustrate the remarkable continuity of grades and abundances across the whole of the CCZ.

The morphological features of the seafloor are similar in the TOML and the NORI Areas, which all lie within the Abyssal Plains and are characterized by sub-parallel basaltic lava ridges called abyssal hills. The Areas are punctuated by typically extinct volcanic knolls and seamounts and scattered sediment drifts in which few nodules are preserved at the seafloor.

Seafloor polymetallic nodules rest on the seafloor at the seawater — sediment interface. Such nodules are composed of nuclei and concentric layers of manganese and iron hydroxides and are formed by precipitation of metals from the surrounding seawater and sediment pore waters. Nickel, cobalt and copper are also precipitated and occur within the structure of the manganese and iron minerals.

The specific conditions of the CCZ (water depth, latitude, and seafloor sediment type) are considered to be the key controls for the formation of polymetallic nodules. Nodules are typically 4 to 6 cm and up to 10 cm in diameter.

The exploration methods used to explore and delineate the mineral resources in the TOML and NORI areas were essentially the same. Multibeam echo-sounding system (MBES) was used to determine the depth of water (bathymetry) and the acoustic reflectance (backscatter) of the seabed. Nodule coverage was interpreted using the backscatter data. Physical sampling of the nodules was carried out initially using FFG samplers and in more recent years by BC samplers which provide a better-quality sample. Measurements of nodule abundance obtained from physical samples were supplemented with estimates of abundance made using the long-axis estimation (“LAE”) method and high-resolution photographs of the seafloor.

Data collected by TOML in 2013 and 2015 supports the historical data but also is of sufficient quantity and quality to allow estimation of an indicated mineral resource for five sub areas within TOML Areas B, C, D and F called B1, C1, D1, D2 and F1. More detailed data collected by TOML has also allowed estimation of a measured mineral resource for a single sub area within TOML Area B.

The key data sets behind the inferred mineral resource estimate for TOML Areas A through E are surface samples obtained by free fall grab samplers, although a few results from box-corers were also included. Free fall grab samplers are the standard sampling method as they are the most productive tool available. They are believed to underestimate the actual abundance, as smaller nodules may escape some grabs during ascent and larger nodules around the edge of the sampler may be knocked or fall out during the sampling process. This may introduce some conservatism to the inferred mineral resource estimates.

The key data behind the inferred mineral resource estimate for TOML Area F and the indicated and measured mineral resources are box-corers and measured photographs. Box-corers take longer to collect than free fall grab samplers, but they are believed to have less bias. Photos cover a much greater area than either free fall grabs or box-corers. The weight of individual nodules can be accurately estimated from the length of their long or major axis; a relationship first discovered in the 1970s. Using the box-core samples as calibration devices, TOML was able to measure the size of nodules on several hundred photographs in Areas B and C. Abundance is shown to be related both to nodule coverage in photos and to acoustic response (backscatter) from regional survey. These data thus provide very detailed indications of nodule abundance and continuity.

Many of the records of the sampling procedures used by the pioneer contractors were not available to the Qualified Persons, but it is likely that all of the pioneer contractors followed similar procedures to that used by TOML. Nodule abundance (wet kg/m²) was derived by dividing the weight of recovered nodules by the surface area covered by the open jaws of the sampler or corer (typically 0.25 to 0.75 m²). A split of the nodules was dried, crushed and ground to enable grade determination via standard analytical methods (typically atomic absorption spectrometry, X-ray fluorescence or inductively coupled plasma methods), either on the vessel or back on shore. Specific nodule chemical standards were used for instrument calibration. TOML also present the results of field, submitted and laboratory duplicates of nodule samples.

Analysis of the data revealed that, as a consequence of their origin, nodule grades vary only slightly across the CCZ, with spatial continuity of the abundance, Mn, Ni, Co, and Cu grades often ranging from the order of several kilometers up to several tens of kilometers. Nodule abundance is sometimes less continuous than grade, as it is also subject to local changes in net sedimentation (a consequence of seafloor slope, slumping, erosion and local currents).

For more information about the TOML exploration campaigns in 2013 and 2015, see Section 7 of the TOML Technical Report Summary.

Mineral resource estimate

The mineral resource was classified on the basis of the quality and uncertainty of the sample data and sample spacing, in accordance with the definitions of “inferred mineral resource,” “indicated mineral resource” and “measured mineral resource” under the SEC Mining Rules.

Estimation of tonnage and grade for the TOML Contract Area within the CCZ was undertaken using only sample data within the TOML Contract Area in the second quarter of 2016. The estimates are based on the historical box-core and free fall-grab nodule sampling (262 samples) supplemented with recently acquired TOML nodule box core (113 samples) and photo-profile data (20,857 frames over 587 line km). Only sample data within the TOML Contract Area was used to inform the estimates.

Six block models were constructed using the geostatistical modelling programs Gstat 1.1-3 and R 3.2.5, one for each TOML Exploration Area (A to F), in three passes. The first pass used a parent block dimension of 1.75 km by 1.75 km and filled the areas defined as measured mineral resource. The second pass for indicated mineral resource used a parent block size of 3.5 km by 3.5 km while the third pass for inferred mineral resource used a parent block size of 7.0 km by 7.0 km.

The modelling methodology used for estimating the mineral resource was determined through careful consideration of the scale of deposit, mechanism of nodule formation, geological controls and nature of the sampling method. The approach involved estimating nodule abundance and grades into a two-dimensional block model with abundance used for calculating tonnage. Abundance and grades were estimated using Ordinary Kriging (OK) with comparison (not reported) estimates using Inverse Distance Weighting (IDW) and nearest neighbor. The modelling methodology is similar to the method applied by the ISA (2010) for its global estimate which was produced by a multi-disciplinary effort that involved recognized subject matter experts.

The historical nodule sample data is considered suitable for the purpose of estimating mineral resources to an inferred level of confidence. The Qualified Person also considered that the combination of the TOML and historical nodule sample data (physical samples and photo based long axis estimates) combined with detailed backscatter, photo profiling and geological interpretation is sufficient to estimate polymetallic nodule indicated mineral resources and, in one small especially data rich area, measured mineral resources.

Inferred mineral resource classification was based on sampling by pioneer contractors on a nominal spacing of 20 km, the variation and uncertainty in the sample quality, and the likely presence of short-range variation to nodule abundance.

Indicated mineral resource classification was based on box core sampling by TOML on a nominal spacing of approximately 7 km by 7 km (including photo profiling in some cases at 7 km by 3 km), supplemented by sampling by pioneer contractors.

Measured mineral resource was based on box core sampling by TOML on a nominal spacing of approximately 7 km by 7 km plus photo-profiling on a nominal spacing of 3.5 km by 3.0 km, supplemented by sampling by pioneer contractors.

The mineral resource estimate for the TOML Contract Area, and at a 4 kg/m² abundance cut-off is set forth below. The estimated mineral resources were determined in 2021, as of December 31, 2020, and also reflect the estimated mineral resources as of December 31, 2021 as none of the mineral resources in these areas were depleted by mining or any other activities.

Mineral Resource Estimate December 31, 2021 and December 31, 2020, In-Situ, for the TOML Contract Area within the CCZ at a 4 kg/m² nodule abundance cut-off

Mineral Resource Classification	Tonnes (x10⁶ wet t)*	Abundance (wet kg/m²)	Ni (%)	Cu (%)	Co (%)	Mn (%)
Measured	2.6	11.8	1.33	1.05	0.23	27.6
Indicated	69.6	11.8	1.35	1.18	0.21	30.3
Measured + Indicated	72.2	11.8	1.35	1.18	0.21	30.2
Inferred	696	11.3	1.29	1.14	0.20	29.0

Note: Tonnes are quoted on a wet basis and grades are quoted on a dry basis, which is common practice for bulk commodities. Moisture content was estimated to be 28% w/w. These estimates are presented on an undiluted basis without adjustment for resource recovery.

* Variations in totals are due to rounding of individual values. Mn, Ni, Cu and Co assays on samples dried at 105°C.

The TOML Contract Area has sufficient samples of adequate quality to define a mineral resource for Mn, Ni, Cu and Co. The estimate of abundance and hence tonnage for the inferred mineral resource for the TOML Contract Area may be biased low due to reliance on free fall grab samples in places.

The above mineral resource estimate (measured, indicated and inferred mineral resources), which was informed by data collected by TOML in 2013 and 2015, is presented in Table 11.9 of the TOML Technical Report Summary.

Due to the extremely low variance in the grades and the high metal content of the nodules, a cut-off based on abundance is appropriate for determining the limits of economic exploitation. A cut-off of 4 kg/m² abundance was chosen for the TOML Contract Area, based on the estimates of costs and revenues presented in the initial assessment contained in the NORI Technical Report Summary, generalized as follows: 1.7 Mt minimum annual tonnage mined; \$0.25 Million/km² for offshore operating costs; 1,036 km² collected area processed; \$95/dry tonne for transport costs; \$119/dry tonne for processing costs; \$15/dry tonne for corporate, general and administrative costs; \$33/dry tonne for ISA and state royalties; 95% recovery of nickel at an assumed price of nickel metal \$16,472/t; 86% recovery of copper at an assumed price of \$6,872/t copper metal; 77% recovery of cobalt at an assumed price of \$46,333/t cobalt metal; and 99% recovery of manganese at an assumed price of \$4.50/dmtu manganese in manganese silicate. The metal prices assumed in the calculation of the cut-off were: nickel metal \$16,472/t; nickel in nickel sulfate \$18,807/t Ni; copper metal \$6,872/t; cobalt metal \$46,333/t; cobalt in cobalt sulfate \$56,920/t Co; manganese in manganese silicate \$4.50/dmtu. The price estimates are long term (2034 – 2046) forecasts provided in a report by CRU International Limited (CRU, 2020). The Qualified Person considered that this timeframe is reasonable in view of the likely time required to bring the majority of the TOML mineral resources into production.

The initial inferred mineral resource for the TOML Contract Area was reported on March 20, 2013 by Golder Associates. The changes in the above mineral resource estimate from 2013 for the TOML Contract Area are due to:

- the inclusion of Areas E and F for the first time, and high abundances and grades in Area F;
- additional nodule abundance sample information (from box core and photo profile) collected during the 2015 campaign;
- setting the abundance estimates within the no nodule domain to zero in areas covered by MBES (TOML Areas B, C, D, E, F);
- the use of ordinary kriging (rather than inverse distance weighting) supported by short-range variogram to estimate abundance; and
- changes in block model parent cell size related to improved sample spacing.

Comparison of the 2013 inferred mineral resource estimate and the above estimate shows that the additional data has increased the total mineral resource tonnage by 3%. In the areas with the newest data (the indicated and measured areas), abundance and grades are all higher in the new model than the 2013 model. These changes show that it is reasonable to expect that the majority of inferred mineral resources could be upgraded to indicated or measured resources with further exploration.

Information concerning our mineral properties in the TOML Technical Report Summary and in this prospectus includes information that has been prepared in accordance with the requirements of the SEC Mining Rules set forth in subpart 1300 of Regulation S-K. Under SEC standards, mineralization, such as mineral resources, may not be classified as a “reserve” unless the determination has been made that the mineralization could be economically and legally produced or extracted at the time of the reserve determination. As used in this prospectus, the terms “mineral resource,” “measured mineral resource,” “indicated mineral resource” and “inferred mineral resource” are defined and used in accordance with the SEC Mining Rules set forth in subpart 1300 of Regulation S-K. **You are specifically cautioned not to assume that any part or all of the mineral deposits in these categories will ever be converted into mineral reserves, as defined by the SEC.**

You are cautioned that mineral resources do not have demonstrated economic value. Inferred mineral resources have a high degree of uncertainty as to their existence as to whether they can be economically or legally mined. Under the SEC Mining Rules, estimates of inferred mineral resources may not form the basis of an economic analysis. It cannot be assumed that all or any part of an inferred mineral resource will ever be upgraded to a higher category. A significant amount of exploration must be completed in order to determine whether an inferred mineral resource may be upgraded to a higher category. **Therefore, you are cautioned not to assume that all or any part of an inferred mineral resource exists, that it can be economically or legally mined, or that it will ever be upgraded to a higher category. Likewise, you are cautioned not to assume that all or any part of measured or indicated mineral resources will ever be upgraded to mineral reserves.**

Reasonable prospects for economic extraction

The morphological features of the seafloor are similar in the TOML and the NORI Areas, which all lie within the Abyssal Plains and are characterized by sub-parallel basaltic lava ridges called abyssal hills. The Areas are punctuated by typically extinct volcanic knolls and seamounts and scattered sediment drifts in which few nodules are preserved at the seafloor.

The exploration methods used to explore and delineate the mineral resources in the TOML and NORI areas were essentially the same. MBES was used to determine the depth of water (bathymetry) and the acoustic reflectance (backscatter) of the seabed. Nodule coverage was interpreted using the backscatter data. Physical sampling of the nodules was carried out initially using FFG samplers and in more recent years by BC samplers which provide a better- quality sample. Measurements of nodule abundance obtained from physical samples were supplemented with estimates of abundance made using the LAE method and high- resolution photographs of the seafloor.

The sample preparation and assaying procedures used in the TOML and NORI Areas were essentially the same. The pioneer investor data lacks some supporting information but all studies to date indicate that the pioneer investor data is reliable. In both Areas, high standards of quality assurance/quality control were applied to the exploration programs that were carried out by TOML and NORI. The assay data are supported by the results of certified reference materials, duplicate samples, blank samples, and duplicate analyses at a second laboratory. Sample security was of a high standard and the Qualified Persons considered that there was negligible risk of interference with the samples.

The development plan for commercial development of polymetallic nodule deposits in the CCZ were studied as described in the NORI Technical Report Summary. The commonality between the polymetallic nodule deposits in NORI Area D and the TOML Contract Area indicates that the methods proposed for the development of NORI Area D can reasonably be assumed to be equally relevant for future development in the TOML Contract Area.

Collection methods

Recovery and collection methods that could be employed for commercial development of polymetallic nodule deposits in the CCZ were studied as described in the NORI Technical Report Summary. The commonality between the polymetallic nodule deposits in NORI Area D and the TOML Contract Area indicates that the methods proposed for the development of NORI Area D can reasonably be assumed to be equally relevant for future development in the TOML Contract Area. This is discussed further in Section 11.9.4 of the TOML Technical Report Summary, which assessed the collection methods.

The main items of offshore infrastructure are the nodule collector vehicles, the riser, and three production support vessels (PSV).

The nodules are expected to be collected from the seafloor by self-propelled, tracked, collector vehicles. No rock cutting, digging, drill-and-blast, or other breakage will be required at the point of collection. The collectors are expected to be remotely controlled and supplied with electric power via umbilical cables from the PSV. Suction dredge heads on each collector are expected to recover a dilute slurry of nodules, sediment, and water from the seafloor. A hopper on each vehicle is expected to separate sediment and excess water, which is expected to pass out of the hopper overflow, from the nodules, which is expected to be pumped as a higher concentration slurry via flexible hoses to a riser.

The riser is a steel pipe through which nodules are expected to be transferred to the surface by means of an airlift. The riser is expected to consist of three main sections. The lower section is expected to carry the two-phase slurry of nodules and water from the collectors to the airlift injection point. The mid-section is expected to carry a three-phase mixture of slurry and air. This section is expected to also include two auxiliary pipes: one to carry the compressed air for the airlift system, and one to return water from dewatering of the slurry to its subsea discharge point. The upper section of riser is expected to have a larger diameter to account for the expansion of air in the airlift.

The airlift works by lowering the average density of the slurry inside the riser to a level lower than seawater. The difference between the hydrostatic pressure of the seawater at depth and the pressure caused by the weight of the low-density three-phase slurry column inside the riser forces the slurry column to rise. The energy to achieve the lift is expected to be supplied by compressors housed on the PSV, which is expected to be capable of generating very high air pressures.

The PSVs are expected to each support a RALS and its handling equipment, and are expected to house the airlift compressors, collector vehicle control stations, and material handling equipment. All power for offshore equipment, including the nodule collecting vehicles, is expected to be generated on the PSVs. The PSVs are expected to be equipped with controllable thrusters and are expected to be capable of dynamic positioning (DP), which are expected to allow the vessels and risers to track the collectors. Nodules are expected to be discharged from the RALS to the PSVs, where they are expected to be dewatered and temporarily stored or transferred directly to a transport vessel. A preliminary assessment of the transportation fleet for transfer of nodules from the CCZ to an existing deep-water industrial port equipped with bulk offloading facilities was examined. The TOML Technical Report Summary assumed that chartered vessels with 35,000 to 100,000 tonne deadweight capacities would be used to transport the dewatered nodules to the port of Lazaro Cardenas, Michoacan, Mexico, 960 nm from the NORI Area D reference site. The vessels are expected to be converted bulk mineral carriers with dynamic positioning (DP) to allow tracking behind the production support vessels during operations. The method of offloading, known as tandem offloading, is well established for offloading of oil production vessels in remote areas of the world.

Mineral processing and metallurgical testing

The polymetallic nodules in the TOML and NORI Areas have similar morphological, mineralogical, and grade characteristics. As noted in Section 10 of the TOML Technical Report Summary, all published historical work indicates that processing of nodules is technically feasible.

The commonality between the polymetallic nodule deposits in NORI Area D and TOML Contract Area indicates that the methods proposed for the development of NORI Area D can reasonably be assumed to be equally relevant for future development in the TOML Contract Area. This is discussed further in Section 11.9.5 of the TOML Technical Report Summary, which assessed the following mineral processing scenario.

The first part of the pyrometallurgical process is the RKEF process that is widely used in the nickel laterite industry. The second pyrometallurgical step (sulphidization of the alloy produced in the first step to form a matte and then partially conversion in a Peirce-Smith converter to remove iron), while not widely practiced, also has commercial precedent at the Doniambo plant of Societe Le Nickel in New Caledonia.

Sulfuric acid leaching of matte from the pyrometallurgical process has precedent in the platinum group minerals (PGM) industry. Although copper producers typically have a solvent extraction step before electrowinning of their copper, direct copper electrowinning is done in most PGM refineries, where nickel and cobalt are also significant pay-metals. This is to maximize nickel recovery and minimize operating expenses. The nickel and cobalt are expected to be purified using solvent extraction, ion exchange and precipitation, which are all commercially proven hydrometallurgical processes. Battery grade nickel and cobalt sulfate are expected to then be crystallized from the purified solutions.

The pyrometallurgical process is expected to form two byproducts as well as the matte for the hydrometallurgical refinery:

- an electric furnace slag containing silica and 53% MnO that is intended to be sold as feed to the Si-Mn industry; and
- a converter aisle slag that could be used for aggregate in road construction or other applications.

The hydrometallurgical refinery is expected to generate iron residues that would, for a stand-alone plant, require disposal. However, these streams can be recycled back to the pyrometallurgical plant for re-treatment and recovery of entrained pay metals.

Selection of ammonia as a principal reagent in the hydrometallurgical refinery means that an additional by-product — ammonium sulfate — may be generated. This could be sold into the fertilizer industry.

The copper cathode quality from direct electrowinning, without a solvent extraction step, is expected to be $\geq 99.9\%$ Cu. Quality of the matte produced in the pyrometallurgical plant will have an impact on this, including the potential carryover of impurities beyond values assumed for the purpose of the IA.

The production of battery-grade nickel and cobalt sulfates is targeted instead of nickel or cobalt cathodes or other intermediate products.

In summary:

- All parts of the proposed process have commercial precedents in similar or analogous industries, however not as a whole continuous flowsheet.
- Pay-metals are recovered in the following forms:
 - Copper cathodes with an expected quality of $\geq 99.9\%$ Cu.
 - Battery-grade nickel sulfate.
 - Battery-grade cobalt sulfate.
 - Rather than generating large waste streams, the process is expected to produce by-products including high manganese content furnace slag and ammonium sulfate.

The process assumptions used in this TOML Technical Report Summary will need to be verified as the project proceeds.

For more information on mineral processing and metallurgical testing, see Section 10 of the TOML Technical Report Summary.

Environmental studies, permitting, community, or social impact

Historically, a significant amount of technical work has been undertaken within the CCZ by contractors under the ISA and a significant body of information has been acquired during the past 40 years on the likely environmental impacts of collecting nodules from the seafloor.

TOML's offshore exploration campaigns have included sampling to support environmental studies, collection of high-resolution imagery and environmental baseline studies. A number of future campaigns are planned to collect data on ocean currents and water quality to assist plume modelling, environmental baseline studies, box core and multicorer sampling focused on benthic ecology and sediment characteristics.

The social impacts of the offshore operation are expected to be positive. The CCZ is uninhabited by people, and there are no landowners associated with the TOML Areas. No significant commercial fishing is carried out in the area. The project is expected to provide a source of revenue to the sponsor country, Tonga, and to the ISA.

The onshore environmental and social impacts have not yet been assessed because the process plant has not been designed in detail, and the location and host country (and hence regulatory regime) not confirmed. The planned metallurgical process is not expected to generate solid waste products.

For more information on environmental studies, permitting and social or community impact, see Section 17 of the TOML Technical Report Summary.

Internal controls and data verification

Data collected by TOML in 2013 and 2015 supports the historical data but also is of sufficient quantity and quality to allow estimation of an indicated mineral resource for five sub areas within TOML Areas B, C, D and F. More detailed data collected by TOML has also allowed estimation of a measured mineral resource for a single sub area within TOML Area B. Chain of custody, sample security, Quality Assurance and Quality Control were documented in detail for the TOML data.

The database provided by the ISA contains multiple independent datasets that were independently collected and sampled using similar methods (FFG or BC sampling) but with slightly different equipment and were assayed by different laboratories. Because the database contains multiple datasets the datasets can be compared with each other for the purpose of validating the internal consistency of the data. Additionally, there are a number of published summaries of data that have not been provided to the ISA but show similar mean grades to the data within the TOML Exploration Area.

The sample data are supported by independent third-party data, have been reviewed by the ISA LTC during the process of granting licenses to the Pioneer Contractors, and are maintained by the independent ISA.

The database includes all data submitted to the ISA that were collected in the Reserved Areas of the CCZ. The data were collected by parties completely independent of TOML or the previous owner of TOML and retained exclusively in the custody of the ISA prior to their transfer. The data sets were also subject to third-party review by the ISA's LTC, as part of the process of granting Pioneer Contractors Exploration Areas.

The original assay sheets from the laboratories for the individual nodule samples within the TOML Contract Area are not available. Neither are the quality control procedures used by the laboratories and the ISA. It is reasonable to infer that the historical data is of sufficient quality for an Inferred Mineral Resource estimate because:

- The ISA is an independent agency with significant accountability under the Law of the Sea. Part of its mandate is the receipt and storage of seafloor sampling data suitable for the estimation of nodule resources and the legally binding award of licenses. It is reasonable to assume that a reasonable level of care was applied by the ISA.
- Comparison of the six independent data sets from the CCZ shows a high level of consistency in abundance and grade and, conversely, provides no evidence of bias or systematic error in the TOML data.

- Recent TOML nodule sampling confirms the existence, and abundance and grade continuity of the polymetallic nodules within the TOML Exploration Areas.

The Qualified Person considered that the combination of the TOML historical nodule sample data (physical samples and photo based long axis estimates) combined with detailed backscatter, photo profiling and geological interpretation is sufficient to estimate polymetallic nodule indicated mineral resources and, in one small especially data rich area, measured mineral resources.

The primary characteristic of the polymetallic nodule deposit that separates this deposit from typical terrestrial manganese, nickel and copper deposits is that the nodules themselves can be accurately mapped through photo-profiles and backscatter acoustic response. The bulk of the polymetallic nodules sit on top of the seabed allowing them to be photographed. However, in some areas such as TOML Area D some nodules are partially covered by sediment making it more difficult to detect the presence and abundance of the nodules. The most accurate method for determining nodule abundance is through physical sampling by box-core or free fall-grab sampling. However, these methods are costly and result in wide sample spacing. Due to the fact that nodules are visible, photography can be used in many areas to estimate nodule abundance directly. The two methods for doing this are estimating the nodule percent coverage (percent of exposed nodule surface area within the photo) and measuring each individual nodule long-axis and then using these measurements to calculate abundance using variants of the formula defined by Felix (1980). The long-axis estimation (LAE) method is the most accurate and preferred method but comes at a cost in the time to manually process each photo — limiting the number of photos that can be used for estimating abundance. The benefit of using photographs is being able to demonstrate continuity between physical sample location and accurately quantify nodule abundance. TOML is developing an automated method of doing these measurements for future application.

The Qualified Person considered the abundance estimates derived from photographs to date from TOML Areas B and C, to be suitable for estimating nodule abundance for the mineral resource.

For more information about quality control/quality assurance and data verification, see Section 8 and Section 9 of the TOML Technical Report Summary.

Information Available on the Internet

Our internet address is <https://themetals.co>, to which we regularly post copies of our press releases as well as additional information about us. Our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and all amendments to those reports, are available to you free of charge through the Investors section of our website as soon as reasonably practicable after such materials have been electronically filed with, or furnished to, the SEC. The SEC maintains an internet site (<http://www.sec.gov>) that contains reports, proxy and information statements, and other information regarding issuers that file electronically with the SEC. We include our website address in this prospectus only as an inactive textual reference. Information contained in our website does not constitute a part of this prospectus or our other filings with the SEC.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following discussion and analysis of the financial condition and results of operations of DeepGreen Metals Inc. (for purposes of this section, "DeepGreen," "we," "us" and "our") should be read together with DeepGreen's audited financial statements as of and for the years ended December 31, 2021 and 2020, in each case together with the related notes thereto, included elsewhere in this prospectus. This discussion contains forward-looking statements and involves numerous risks and uncertainties, including, but not limited to, those described under the heading "Risk Factors." Actual results may differ materially from those contained in any forward-looking statements.

Overview

We are a deep-sea minerals exploration company focused on the collection, processing and refining of polymetallic nodules found on the seafloor in international waters of the Clarion Clipperton Zone ("CCZ"), about 1,300 nautical miles south-west of San Diego, California.

The CCZ is a geological submarine fracture zone of abyssal plains and other formations in the Eastern Pacific Ocean, with a length of around 7,240 km (4,500 miles) that spans approximately 4,500,000 square kilometers (1,700,000 sq mi). Polymetallic nodules are discrete rocks that sit unattached to the seafloor, occur in significant quantities in the CCZ and have high concentrations of nickel, cobalt and copper in a single rock. These four metals contained in the polymetallic nodules are critical for the transition to clean energy. Our resource definition work to date shows that nodules in our contract areas represent the world's largest estimated undeveloped source of critical battery metals. If we are able to collect polymetallic nodules from the seafloor on a commercial scale, we plan to use such nodules to produce three types of metal products: (i) feedstock for battery cathode precursors (nickel and cobalt sulfates) for electric vehicles ("EV") and renewable energy storage markets, (ii) copper cathode for EV wiring, clean energy transmission and other applications and (iii) manganese silicate for manganese alloy production required for steel production. Our mission is to build a carefully managed shared stock of metal that can be used, recovered and reused for generations to come. Significant quantities of newly mined metal are required because existing metal stocks are insufficient to meet rapidly rising demand.

Exploration and exploitation of seabed minerals in international waters is regulated by the International Seabed Authority ("ISA"), an intergovernmental organization established pursuant to the 1994 Agreement Relating to the Implementation of the United Nations Convention on the Law of the Sea ("UNCLOS"). The ISA grants contracts to sovereign states or to private contractors who are sponsored by a sovereign state. The ISA requires that a contractor must obtain and maintain sponsorship by a host nation that is a member of the ISA and signatory to UNCLOS and such nation must maintain effective supervision and regulatory control over such sponsored contractor. The ISA has issued a total of 19 polymetallic nodule exploration contracts covering approximately 1.28 million km², or 0.4% of the global seafloor, 17 of which are in the CCZ. We hold exclusive exploration and commercial rights to three of the 17 polymetallic nodule contract areas in the CCZ through our subsidiaries Nauru Ocean Resources Inc. ("NORI") and Tonga Offshore Mining Limited ("TOML"), sponsored by the Republic of Nauru ("Nauru") and the Kingdom of Tonga ("Tonga"), respectively, and exclusive commercial rights through our subsidiary, DeepGreen Engineering Pte. Ltd.'s ("DGE"), arrangement with Marawa Research and Exploration Limited ("Marawa"), a company owned and sponsored by the Republic of Kiribati ("Kiribati").

We have key strategic alliances with (i) Allseas Group S.A. (Allseas), a leading global offshore contractor, which is developing a pilot collection system, which is expected to be modified into an initial smaller scale commercial production system and serve as the basis for the design of a full-scale commercial production system and (ii) Glencore International AG (Glencore) which holds offtake rights on 50% of the NORI nickel and copper production. In addition, we have worked with an engineering firm Hatch Ltd. (Hatch) and consultants Kingston Process Metallurgy Inc. (KPM) to develop a near-zero solid waste flowsheet. The pyromet stages of the flowsheet were tested as part of our pilot plant program at FLSmidth & Co. A/S's and XPS Solutions' (Glencore subsidiary) facilities and hydrometallurgical refining stages are being carried out at SGS SA. The near-zero solid waste flowsheet is in the process design that is expected to serve as the basis for our onshore processing facilities. In March 2022, we entered into a non-binding memorandum of understanding with Epsilon Carbon Pvt, LTD. (Epsilon Carbon) in which Epsilon Carbon expressed its intent to conduct pre-feasibility work to potentially finance, engineer, permit, construct and operate a commercial polymetallic nodule processing plant in India.

We are currently focused on applying for our first exploitation contract from the ISA on the NORI Area D contract area with the goal of potentially starting commercial production in 2024. To reach our objective and initiate commercial production in 2024, we are: (i) defining our resource and project economics, (ii) developing an offshore nodule collection system, (iii) assessing the ESG impacts of offshore nodule collection, and (iv) developing onshore technology to process collected polymetallic nodules into a manganese silicate product, and an intermediate nickel-copper-cobalt matte product and/or end-products like nickel and cobalt sulfates, and copper cathode.

We are still in the exploration phase and have not yet obtained any exploitation contracts from the ISA to commence commercial scale polymetallic nodule collection in the CCZ nor have we obtained the applicable environmental permits and other permits required to build and operate commercial scale polymetallic nodule processing and refining plants on land.

2021 Highlights

2021 was a significant year in our potential to exploit our resources and begin commercial production. Below are a few of the developments that occurred in 2021.

- **Creation of TMC the metals company Inc.** - On September 9, 2021, we completed the Business Combination, creating TMC the metals company Inc. and raised gross proceeds of \$137.6 million in cash prior to transaction fees.
- **Estimation of Resources** - On January 15, 2021, AMC, a leading mining consulting firm, issued a revised independent resource estimate for the NORI Area D and for TOML in accordance with Canadian NI 43-101 standards, which showed an upgrade to the quantity and quality of resources over earlier estimates we had received.
- **Definition of Value** – On March 17, 2021, AMC issued an independent SK 1300 compliant initial assessment report for the NORI Area D property which indicated life of project net cash flow of \$30.6 billion and a project NPV of \$6.8 billion using a 9% discount rate and assuming metal prices for nickel metal \$16,472/t; nickel in nickel sulfate \$18,807/t Ni; copper metal \$6,872/t; cobalt metal \$46,333/t; cobalt in cobalt sulfate \$56,920/t Co; manganese in manganese silicate \$4.50/dmtu Mn.
- **Expected Regulatory Timeline** - In July 2021, the Republic of Nauru exercised its right under 1994 UNCLOS Implementation Agreement by requesting that the ISA complete its adoption of the exploitation regulations within two years. The ISA met in December 2021, laying out a schedule of work to be performed in 2022 with the goal of finalizing regulations regarding the exploitation of seabed minerals in the Area by July 2023.
- **Conversion of Nodules into Salable Metal** – We completed pyrometallurgical pilot testing of polymetallic nodules producing a matte product containing > 80% combined Ni, Cu and Co which is a suitable feedstock to produce critical metals essential for EV batteries and wiring. We also produced a manganese silicate product which can be sold direct to market and further processed to manganese alloy, a critical input to steel production.
- **Continued Development of Pilot Nodule Collection System** - In collaboration with Allseas, the ultra-deep-water drillship, the *Hidden Gem* was modified and classified as the world's first sub-sea mining vessel. Allseas progressed the development and assembly of the collector vehicle and vertical transportation system throughout 2021. We expect to complete this work in time for our pilot nodule collection tests in 2022.
- **Completion of Deep-Sea Environmental Baseline Program and Submission of Collector Test EIS** – We completed five offshore campaigns in 2021, including the offshore sampling and data collection for our environmental baseline program. The EIS for the pilot test in the NORI Area D was submitted in July 2021 and the test is planned for the second half of 2022.
- **Support for Potential Reduced Impact** - Independent plume modelling for the EIS was undertaken in 2021 which showed a more limited, localized impact than anticipated.
- **Enhanced Transparency** – We partnered with Kongsberg Digital to develop the digital twin required to support our Adaptive Management System which will provide real time visibility to stakeholders of the sub-sea operations, and will enable us to operate safely, within acceptable boundaries.

The Business Combination

On September 9, 2021, we completed the Business Combination with SOAC. The transaction resulted in the combined company being renamed “TMC the metals company Inc.” and the combined company’s common shares and warrants to purchase common shares commenced trading on the Nasdaq Global Select Market (“Nasdaq”) on September 10, 2021, under the symbols “TMC” and “TMCWW,” respectively. As a result of the Business Combination, we received gross proceeds of approximately \$137.6 million.

The Business Combination was accounted for as a reverse recapitalization and DeepGreen was deemed the accounting acquirer. Under this method of accounting, SOAC was treated as the acquired company for financial statement reporting purposes. The Business Combination was accounted for as a reverse acquisition with no goodwill or intangible assets being recorded. As SOAC had no operations, the net assets acquired were recorded at their historical cost. Adjustments related to the Business Combination including consideration paid to DeepGreen shareholders and any other adjustments to eliminate the historical equity of SOAC and recapitalize the equity of DeepGreen were recorded to common shares to reflect the effective issuance of common shares to SOAC and Private Investment in Public Equity investors in the Business Combination.

Following the Business Combination, we became the successor to an SEC-registered company, which resulted in us hiring additional personnel and implement procedures and processes to address public company regulatory requirements and customary practices to ensure ongoing compliance with applicable law and Nasdaq listing requirements. We expect to incur additional annual expenses as a public company for, among other things, directors’ and officers’ liability insurance, director fees, additional internal and external accounting, legal and administrative resources, including increased personnel costs, audit and other professional service fees.

Exploration Contracts

We currently hold exclusive exploration rights to certain polymetallic nodule areas in the CCZ through our subsidiaries NORI and TOML, sponsored by the Republic of Nauru and the Kingdom of Tonga, respectively, and exclusive commercial rights through our subsidiary’s (DGE), arrangement with Marawa, a company owned and sponsored by the Republic of Kiribati.

NORI. NORI our wholly-owned subsidiary, holds exploration rights to four blocks (NORI Area A, B, C, and D, the “NORI Contract Area”) covering 74,830 km² in the CCZ that were granted by the ISA in July 2011. NORI is sponsored by Nauru pursuant to a certificate of sponsorship signed by the Government of Nauru on April 11, 2011. The D block of the NORI area (“NORI Area D”) is the seafloor parcel where we have performed the most resource definition and environmental work to date. NORI commissioned AMC Consulting Ltd, a leading mining consulting firm (AMC), to undertake a preliminary economic assessment (“PEA”) of the mineral resource contained in NORI Area D and to compile a technical report compliant with Canadian National Instrument (NI 43-101), which was completed in March 2021. AMC subsequently compiled the NORI Technical Report Summary, dated March 2021, which included an initial assessment and an economic analysis of NORI Area D prepared in accordance with the SEC’s Modernization of Property Disclosures for Mining Registrants set forth in subpart 1300 of Regulation S-K (the “SEC Mining Rules”). The NORI Technical Report Summary is filed as Exhibit 96.1 to the registration statement of which this prospectus forms a part.

TOML. TOML our wholly-owned subsidiary which we acquired in March 2020, holds exploration rights to an area covering 74,713 km² in the CCZ that were granted by the ISA in January 2012 (the “TOML Contract Area”). On March 8, 2008, Tonga and TOML entered into a sponsorship agreement formalizing certain obligations of the parties in relation to TOML’s exploration application to the ISA (subsequently granted) for the TOML Contract Area. The sponsorship agreement was updated on September 23, 2021. TOML commissioned a Technical Report Summary by AMC, dated March 2021, which is filed as Exhibit 96.2 to the registration statement of which this prospectus forms a part.

Marawa. DGE, our wholly-owned subsidiary, entered into agreements with Marawa and Kiribati which provide DGE with exclusive exploration rights to an area covering 74,990 km² in the CCZ (the “Marawa Contract Area”). The exploration contract between Marawa and the ISA (the “Marawa Exploration Contract”) was signed on January 19, 2015. To date, very limited offshore marine resource definition activities in the Marawa Contract Area have occurred and we expect to commit future resources as contractually agreed with Marawa to evaluate the future commercial viability of any project in such area. We have not completed adequate exploration to establish the economic viability of any project in the Marawa Contract Area. Further work will need to be conducted in order to assess the viability of any potential project in the Marawa Contract Area and such work may take several years until such assessment can be made. Marawa has delayed certain of its efforts in the Marawa Contract Area while it determines how it will move forward with additional assessment work.

Key Trends, Opportunities and Uncertainties

We are currently a pre-revenue company and we do not anticipate earning revenues until such time as NORI receives an exploitation contract from the ISA and we are able to successfully collect polymetallic nodules and process the nodules into saleable products on a commercial scale. We believe that our performance and future success pose risks and challenges, including those related to: finalization of ISA regulations to allow for commercial exploitation, approval of an application for the ISA exploitation contract, developing environmental regulations associated with our business and successful development of our technologies to collect and process polymetallic nodules. These risks, as well as other risks, are discussed in the subsection entitled “*Quantitative and Qualitative Disclosures About Market Risk*” and in the section entitled “*Risk Factors*” included in this prospectus.

Impact of Climate Change

TMC is committed to adopting the Task Force on Climate-Related Financial Disclosures recommendations. In our upcoming inaugural impact report, we will be providing the same type of climate-related disclosure to the one in this prospectus. We recognize that climate change may have a meaningful impact on our financial performance over time, and we have begun the process of consolidating key risks and corresponding action plans to mitigate their negative impact of climate change and create value.

Our climate related transition risks and opportunities are likely to be driven by changes in regulation, public policy, and technology.

Regulatory risks

Regulations related to emissions limits, such as cap and trade schemes and carbon taxes, would likely increase our future cost of operations, energy purchase, and equipment selection in addition to costs associated with potential carbon tax and/or purchase of carbon offsets. It is difficult to estimate the impact of potential future regulations on future operations.

We are working on a plan for continuous reduction of emissions and eventually developing operations with as close to zero emissions as possible. When selecting the location of our onshore plant, one of our requirements is access to renewable energy as our metallurgical process will be the most energy intensive step in our operations. In addition, we are looking to replace metallurgical coal used as reductant during calcining of nodules and have tested potential renewable alternatives. We are also identifying the best approach for decarbonizing our offshore operations. To date, we have not experienced any material impact to our business related to potential regulations but will continue to evaluate and monitor future developments.

Public policy risks

Awareness of climate change related impacts and commitments made by companies and governments to achieve net zero emissions, continues to grow. We support the ambition of the U.S. to achieve net zero greenhouse gas emissions by no later than 2050 and to reach half of all new vehicles sales to be EVs by 2030. We are committed to achieving zero emissions and are reviewing and designing technologies to achieve this goal. The location of our onshore plant will be key, and we will be working on science-based targets and scenario analysis in 2022.

To support the EV and battery storage value chain, we are looking to close the emerging supply gap of critical battery metals needed for the transition to renewable energy and adoption of EVs. We plan to take advantage of this opportunity to supply lower carbon battery metals, avoid deforestation, and help reduce the cost of batteries.

Technology risks

The timing and deployment of technologies to support the transition to a lower carbon economy can be uncertain. Investments in assets with long lifespans require the selection of not only the proper technology, but also the proper timing to retain the ability to adapt to future developments. There are also risks associated with the additional costs of lower emissions technology and transition to renewables. To mitigate this risk, we based our flowsheet development on existing proven technology, while retaining sufficient flexibility to be able to retrofit processes with new lower carbon technology as they become available.

Physical risks

Our main activity currently consists of offshore exploration campaigns for research and testing purposes, and technology development at partner facilities. However, once a location is selected for our onshore metallurgical plant, we will assess the risks associated with hurricanes, floods, and extreme weather.

COVID-19

In March 2020, the World Health Organization declared the global outbreak of COVID-19 a pandemic. Since then, there have been actions, of varying severity, taken around the world to mitigate and manage the spread of COVID-19. The disparate actions undertaken by local governments to mitigate or manage the spread have had and are expected to continue to have an adverse impact on supply chains and labor markets worldwide. On March 27, 2020, the U.S. enacted the Coronavirus Aid, Relief, and Economic Security (“CARES”) Act to provide financial stimulus and support as a result of the initial economic fallout from events related to the COVID-19 pandemic.

As we are a pre-revenue company, the impacts of COVID-19 are relatively smaller than companies with commercial operations. Depending on the duration and evolution of the pandemic and our supply chains and future customers’ ability to operate normally, there could be future challenges to our business which we cannot currently foresee. It is critical for our partners to have access to supplies and competent human capital for us to collectively meet our business objectives. As we have seen during the height of the pandemic and continuing regulations in certain countries, many of our contractors and service providers have modified their business practices to limit travel and in-person meetings.

While there are positive signs that the current situation is being managed well in most parts of the world and country-wide restrictions and lockdowns are subsiding, there can be no guarantee that any new COVID-19 variant would not result in reinstating restrictions which may impact our business. If significant portions of our contractors, service providers and partners are unable to work effectively, including due to illness, lockdowns, quarantine measures or other government actions, our current development activities and future operations may be impacted negatively. For instance, the final exploitation regulations were expected to be adopted by the ISA during 2020 but were delayed due to COVID-19.

Offshore, in 2021, we have safely and successfully completed five complex campaigns in our NORI Area D in the CCZ involving crew and scientists departing from and returning to San Diego from around the world. In close coordination with our partners, we have implemented rigid quarantining and testing protocols designed to provide a safe COVID-19 free work environment. Onshore, our pilot plant program at third-party facilities has proceeded without COVID-19 related incidents. Our corporate and project development teams have adopted a virtual working environment without a traditional office setting. This means we have been minimally impacted by countrywide lockdowns across the globe. We continue to work and collaborate through virtual channels on an ongoing basis.

We continue to closely monitor the recent developments surrounding the continued spread and potential resurgence of COVID-19 from variants. The COVID-19 pandemic may have an adverse impact on our operations, particularly because of preventive and precautionary measures that our company, other businesses, and governments are taking. Refer to the section entitled “Risk Factors” included in this prospectus for more information. We are unable to predict the full impact that the COVID-19 pandemic will have on our future results of operations, liquidity and financial condition due to numerous uncertainties, including the duration of the pandemic and the actions that may be taken by government authorities. However, COVID-19 is not expected to result in any significant changes to our business or our costs in the near term. We will continue to monitor the performance of our business and reassess the impacts of COVID-19.

Basis of Presentation

We currently conduct our business through one operating segment. As a pre-revenue company with no commercial operations, our activities to date have been limited. Our historical results are reported under U.S. GAAP and in U.S. dollars. All share and per share amounts have been adjusted to reflect the impact of the Business Combination.

TOML Acquisition

On March 31, 2020, DeepGreen entered into an acquisition agreement to acquire the polymetallic nodules business unit of TOML and other entities in the group (the “TOML Group”) from DSMF (the “TOML Acquisition”). Total purchase price of the TOML Acquisition, before transaction costs, was \$32.0 million. TOML holds the TOML Exploration Contract, and some exploration related equipment. The TOML Group also holds various patents and an application right with respect to a prospecting exploration contract in Kiribati.

The purchase price of \$32.0 million was settled through initial cash payments in two tranches of \$0.25 million each (paid on March 31, 2020 and May 31, 2020, respectively), issuance of 9,005,595 common shares, \$0.1 million payment to the ISA on behalf of DSMF and deferred consideration of \$3.4 million which was to be paid on January 31, 2021. The common share consideration paid by DeepGreen was valued at \$3.11 per DeepGreen common share based on the recent private placements completed by DeepGreen for a total of \$28.0 million.

DeepGreen had the option of settling the deferred consideration in either cash or common shares of DeepGreen at its sole discretion. In January 2021, the arrangement with DSMF was amended to pay the entire deferred consideration in cash. The deferred consideration was fully settled on June 30, 2021.

DeepGreen determined that the value of TOML Acquisition was substantially concentrated in the TOML Exploration Contract and therefore considered this to be an acquisition of a group of connected assets rather than an acquisition of a business. Consequently, the total cost of the transaction was primarily allocated to exploration contracts.

Components of Results of Operations

We are an exploration-stage company with no revenue to date and a net loss of \$141.3 million for the year ended December 31, 2021, compared to a net loss of \$56.6 million in the prior year. We have an accumulated deficit of approximately \$304.2 million from inception through December 31, 2021.

Our historical results may not be indicative of our future results for reasons that may be difficult to anticipate. Accordingly, the drivers of our future financial results, as well as the components of such results, may not be comparable to our historical or projected results of operations.

Revenue

To date, we have not generated any revenue. We do not expect to generate revenue until at least 2024 and only if NORI receives an exploitation contract from the ISA and we are able to successfully collect polymetallic nodules and process the nodules into saleable products on a commercial scale. Any revenue from initial production is difficult to predict.

Exploration and Evaluation Expenses

We expense all costs relating to exploration and development of mineral claims. Such exploration and development costs include, but are not limited to, ISA contract management, geological, geochemical and geophysical studies, environmental baseline studies, process development and payments to Allseas for the PMTS. Our exploration expenses are impacted by the amount of exploration work conducted during each period. The acquisition cost of ISA polymetallic nodule exploration contracts will be charged to operations as amortization expense on a unit-of-production method based on proven and probable reserves should commercial production commence in the future.

General and Administrative Expenses

General and administrative (“G&A”) expenses consist primarily of compensation for employees, consultants and directors, including share-based compensation, consulting fees, investor relations expenses, expenses related to advertising and marketing functions, insurance costs, office and sundry expenses, professional fees (including legal, audit and tax fees), travel expenses and transfer and filing fees.

[Table of Contents](#)

Share-based compensation cost from the issuance of stock options and restricted share units (“RSUs”) is measured at the grant date based on the fair value of the award and is recognized over the related service period. Share-based compensation costs are charged to exploration expenses and general and administrative expenses depending on the function fulfilled by the holder of the award. In instances where an award is issued for financing related services, the costs are included within equity as part of the financing costs. We recognize forfeiture of any awards as they occur.

Interest Income/Expense

Interest income consists primarily of interest income earned on our cash and cash equivalents.

Interest expense resulted from our financing transactions, specifically the convertible debentures issued in February 2021, which accrued interest at 7% per annum. The convertible debentures were fully converted into DeepGreen common shares on September 9, 2021.

Foreign Exchange Loss

The foreign exchange income or loss for the periods primarily relates to our cash held in Canadian dollars and to the settlement of costs incurred in foreign currencies, depending on either the strengthening or weakening of the U.S. dollar.

Change in Fair Value of Warrant Liabilities

Change in fair value of warrant liabilities primarily consists of the change in the fair value of the 9,500,000 warrants issued to Sustainable Opportunities Holdings LLC concurrently with SOAC’s initial public offering (the “Private Warrants”). For accounting purposes, the Company was considered to have issued the Private Warrants as part of the Business Combination.

Results of Operations

DeepGreen was determined to be the accounting acquirer and therefore, all information prior to the Business Combination, including the prior period financial information, represent the financial condition and operating results of DeepGreen.

Comparison of the periods ended December 31, 2021 and 2020

(Dollar amounts in thousands, except as noted)	For the Three Months Ended December 31,			For the Year Ended December 31,		
	2021	2020	% Change	2021	2020	% Change
Exploration and evaluation expenses	\$ 12,825	\$ 13,137	(2)%	\$ 93,006	\$ 48,881	90 %
General and administrative expenses	15,445	3,905	295 %	56,583	7,723	633 %

Full Year 2021 compared to Full Year 2020

Exploration and Evaluation Expenses

Exploration and evaluation expenses for the year ended December 31, 2021 were \$93.0 million, compared to \$48.9 million for the year ended December 31, 2020. The increase of \$44 million was primarily due to the recognition of \$27.0 million of share-based compensation granted to personnel during the year ended December 31, 2021 as compared to \$0.8 million during the same period in 2020. The share-based compensation cost for stock options and restricted share units granted to personnel involved in exploration activities is included within exploration and evaluation expenses for the periods presented. The increase in share-based compensation was mainly due to the completion of the Business Combination and increased project activity resulting in additional personnel and new incentive plans, as well as an increase in the fair value of DeepGreen common shares compared to the prior year. In addition, the cost of offshore campaigns that we undertook during the year ended December 31, 2021 was \$39.0 million as compared to \$28.0 million during the same period in 2020, reflecting increased activity to complete environmental baseline studies. In 2021, we had a strategic partnership with Maersk, as described below, pursuant to which we settled the costs for marine vessel services provided by Maersk through the issuance of common shares. Such common shares were recognized at their fair value and the changes in such fair value had a significant impact on exploration and evaluation expenditures in 2021. During March 2021, we revised our previous arrangement with Maersk, to require settlement of marine vessel services in cash instead of common shares. Cost incurred for the PMTS to Allseas during the year ended December 31, 2021 was \$14.3 million, representing the first two milestone payments to Allseas under Amendment 3 of our PMTS agreement with Allseas compared to \$11.7 million during the same period in 2020, whereby we paid \$10 million and issued 3.2 million common shares to Allseas under Amendment 2 of our PMTS agreement with Allseas.

General and Administrative Expenses

G&A expenses for the year ended December 31, 2021 were \$56.6 million compared to \$7.7 million in 2020. The increase in G&A in 2021 was a result of higher share-based compensation which increased by \$30.1 million, reflecting the impact of new incentive plans, with higher issuances and vesting, with an increased workforce, as well as an increase in the fair value of DeepGreen common shares compared to the prior year. The level of corporate activities and the number of corporate personnel increased as a result of the Business Combination. In addition, an expense of \$3.9 million was recognized in the third quarter of 2021, as the board of directors approved amendments to certain stock option grants to extend their initial terms. Professional and consulting fees, and investor relations expenses increased by \$8.6 million and \$5.3 million, respectively, as compared to 2020 due to increased corporate activities as we became a public company. We expect G&A expenses, excluding those related to the Business Combination, to continue to increase as we expand our infrastructure to prepare for commencement of production and due to additional legal, accounting, insurance and other expenses associated with being a public company.

Interest Expense

During the year ended December 31, 2021, we recognized interest expense of \$1.0 million as a result of the issuance of 7% convertible debentures of \$26.0 million during February 2021, prior to their conversion into our common shares in the Business Combination.

Change in Fair Value of Warrant Liability

Change in fair value of warrant liability primarily consists of the change in the fair value of the 9,500,000 warrants issued to Sustainable Opportunities Holdings LLC concurrently with SOAC's initial public offering (the "Private Warrants"). For accounting purposes, we are considered to have issued the Private Warrants as part of the Business Combination.

Liquidity and Capital Resources

Prior to the Closing, our primary sources of capital have been private placements of DeepGreen common shares and DeepGreen preferred shares and the issuance of convertible debentures completed in February 2021, which were automatically converted into DeepGreen common shares immediately prior to the completion of the Business Combination. In addition, on September 9, 2021, we completed the Business Combination with SOAC, and as a result we received gross proceeds of approximately \$137.6 million. As of December 31, 2021, we had cash and cash equivalents of \$84.9 million.

We have yet to generate any revenue from our business operations. We are an exploration-stage company and the recovery of our investment in mineral exploration contracts and attainment of profitable operations is dependent upon many factors including, among other things, the development of production system for collecting polymetallic nodules from the seafloor as well as the development of our processing technology for the metallurgical treatment of such nodules, the establishment of mineable reserves, the demonstration of commercial and technical feasibility of seafloor polymetallic nodule collection and processing systems, metal prices, and securing ISA exploitation contracts. While we have obtained financing in the past, there is no assurance that such financing will continue to be available on favorable terms, if at all.

Fiscal 2020 Financings

During the year ended December 31, 2020, we issued 6.6 million DeepGreen Common Shares in private placements for total proceeds of \$20.4 million. Inclusive in this was a subscription from Allseas for 3.2 million DeepGreen Common Shares for total proceeds of \$10 million.

We further issued 3.2 million DeepGreen Common Shares for services to Allseas at a price of \$3.11 per share for total value of \$10.0 million and 4.7 million DeepGreen Common Shares for marine vessel services to Maersk to settle invoiced cost of \$5.1 million at an agreed upon contract price of \$1.08 per share. Such shares issued to Maersk were recognized for accounting purposes at \$3.11 per share.

During the year ended December 31, 2020, option holders exercised 2.6 million stock options for total proceeds of \$0.9 million at an average exercise price of \$0.42 per share.

Fiscal 2021 Financings

During the year ended December 31, 2021, we issued 4.2 million DeepGreen Common Shares to Maersk for marine vessel services. Such Common Shares were valued at \$6.05 per DeepGreen Common Share. Certain holders of stock options exercised their rights in exchange for 6.3 million DeepGreen Common Shares. The weighted average exercise price of these stock options was \$0.67 per DeepGreen Common Share resulting in total proceeds of \$4.3 million.

During February 2021, we raised a total of \$26 million through convertible debentures financing. The convertible debentures bear interest at the rate of 7.0% per annum, compounded annually, with a maturity date that is 24 months from the date of the financing. The debentures were automatically converted into DeepGreen Common Shares immediately prior to the Business Combination at the conversion price of \$8.64 per share.

On February 18, 2021, debentures totaling \$0.5 million were converted into 50,000 DeepGreen Common Shares, and then converted into 57,894 of our common shares upon the Closing. On September 9, 2021, the Company issued 3,068,673 common shares, after adjustment for the exchange ratio, in connection with the Business Combination, upon conversion of the outstanding debentures consisting of \$25.5 million and \$1.0 million of principal and accrued interest, respectively.

We expect our capital expenditures and working capital requirements to increase materially in the near future as NORI and TOML seek to obtain exploitation contracts, perform the required environmental studies, complete pre-feasibility and feasibility studies. We believe that our cash on hand will be sufficient to meet our working capital and capital expenditure requirements into the third quarter of 2023. With these funds, we expect to be able to complete pilot nodule system collection trials in 2022, complete our environmental impact studies by 2023, and lodge our application to move from exploration phase to exploitation phase in the third quarter of 2023. We may, however, need additional cash resources due to changes in business conditions or other developments, including, but not limited to, deferral of approvals, capital cost escalation, currently unrecognized technical and development challenges or changes in external business environment. To the extent that our current resources are insufficient to satisfy our cash requirements, we may need to seek additional equity or debt financing. If the financing is not available, or if the terms of financing are less desirable than we expect, we may be forced to delay our exploration and/or exploitation activities or scale back our operations, which could have a material adverse impact on our business and financial prospects.

Cash Flows Summary*Comparison of the Periods Ended December 31, 2021 and December 31, 2020*

The following table summarizes our sources and uses of cash for the three months and years ended December 31, 2021 and December 31, 2020.

Presented below is a summary of our operating, investing and financing cash flows:

(thousands)	For the Three Months Ended December 31,		For the Year Ended December 31,	
	2021	2020	2021	2020
Net cash (used in) operating activities	\$ (27,753)	\$ (5,182)	\$ (56,092)	\$ (26,532)
Net cash (used in) investing activities	\$ —	\$ —	\$ (3,842)	\$ (607)
Net cash provided by financing activities	\$ —	\$ 944	\$ 134,701	\$ 21,292
Increase (decrease) in cash	\$ (27,753)	\$ (4,238)	\$ 74,767	\$ (5,847)

Full Year 2021 compared to Full Year 2020**Cash flows used in Operating Activities**

Net cash used in operating activities for the year ended December 31, 2021 was \$56.1 million, attributable to a net loss of \$141.3 million, a net change in net operating assets and liabilities of \$18.7 million and non-cash adjustments of \$66.5 million. Non-cash adjustments primarily consisted of \$12.8 million for the value of shares issued to Maersk and \$60.3 million of share-based payments related to the value of the incentive stock options and RSUs recognized during the year ended December 31, 2021. The change in our net operating assets and liabilities was primarily due to a \$22.0 million increase in accounts payable and accrued liabilities due to the timing of payments.

Net cash used in operating activities for the year ended December 31, 2020 was \$26.5 million, attributable to a net loss of \$56.6 million and a net change in net operating assets and liabilities of \$2.4 million and non-cash adjustments of \$27.7 million. Non-cash adjustments primarily consisted of \$10.0 million expensed for the value of shares issued to Allseas and Maersk as described above, \$12.9 million for the value of shares issued to Maersk at the end of 2020, \$4.1 million of share-based payments related to the value of the incentive stock options recognized during the year ended December 31, 2020, and \$0.6 million for amortization of equipment. The change in our net operating assets and liabilities was primarily due to a \$2.5 million increase in accounts payable and accrued liabilities due to the timing of payments.

Cash flows used in Investing Activities

Net cash used in investing activities for the year ended December 31, 2021 was \$3.8 million and related to the payments made to DSMF for the deferred consideration that became due during the period. As at December 31, 2021 there was no amount outstanding for the deferred consideration pertaining to TOML Acquisition. We also spent \$0.4 million for the purchase of equipment.

Net cash used in investing activities for the year ended December 31, 2020 was \$0.6 million and related to the initial payments made to DSMF in connection with the TOML Acquisition.

Cash flows provided by Financing Activities

Net cash provided by financing activities for the year ended December 31, 2021 was \$134.7 million related to proceeds of \$104.5 million from the Business Combination, proceeds of \$26.0 million from the issuance of convertible debentures and \$4.2 million from the exercise of incentive stock options.

Net cash provided by financing activities for the year ended December 31, 2020 was \$21.3 million related to proceeds from private placements of \$20.3 million and \$0.9 million from the exercise of incentive stock options.

Contractual Obligations and Commitments

NORI Exploration Contract

As part of the NORI Exploration Contract with the ISA, NORI submitted a periodic review report to the ISA in 2021, covering the 2017-2021 period. NORI had committed to spend \$5 million over the five-year period from 2017 to 2021, which it has exceeded, spending close to \$167 million (including over \$77 million spent in 2021). The periodic review report included a summary of work completed over the five-year period and a program of activities and estimated budget for the next five-year period. The report is being reviewed by the ISA.

Marawa Option Agreement and Services Agreement

As part of DGE's Marawa Option Agreement and Services Agreement with Marawa with respect to the Marawa Area, Marawa committed to spend a defined amount of funds on exploration activities on an annual basis. The commitment for fiscal 2021 and 2020 was Australian dollar \$2 million and Australian dollar \$1 million, respectively. The spending commitment for both years has been met. The commitment for fiscal 2022, 2023 and 2024 is Australian dollar \$1 million, Australian dollar \$3 million and Australian dollar \$2 million, respectively. Such commitment is negotiated with the ISA for five-year plans and is subject to regular periodic reviews. Marawa is in the process of preparing to submit its 5-year periodic review report to the ISA. Due to uncertainty on the economic potential of the Marawa Contract Area, Marawa is currently considering conducting another exploration campaign to increase the geological knowledge or is considering to seek a new area. Marawa expects to finalize its decision in 2022. Marawa has delayed its 2022 geological and environmental work programs until it determines how it will move forward. We expect that the offshore engineering, onshore engineering and training work programs will continue to be advanced subject to any limitations posed by the ongoing pandemic.

TOML Exploration Contract

As part of the TOML Exploration Contract, TOML submitted a periodic review report to the ISA in 2021, covering the 2017-2021 period. The periodic review report included a summary of work completed over the five-year period just completed and a program of activities and estimated budget for the next five-year period of \$44 million. TOML had committed to spend \$30.0 million over the five-year period from 2017 to 2021. Such commitment has flexibility where the amount can be reduced by the ISA and such reduction would be dependent upon various factors including the success of the exploration programs and the availability of funding.

For the 2021 year, we had spent approximately \$12.6 million in connection with the TOML Exploration Contract, bringing the five-year total spend to approximately \$17.8 million from 2017 to 2021.

TOML has submitted its periodic 5-year review which includes the next 5-year program of work, with both program periods under consideration by the ISA.

Regulatory Obligations Relating to Exploration Contracts

Each of TOML and NORI require sponsorship from their host sponsoring nations, Tonga and Nauru, respectively. Each company has been registered and incorporated within the applicable host nation's jurisdiction. The ISA requires that a contractor must obtain and maintain sponsorship by a host nation that is a member of the ISA and such nation must maintain effective supervision and regulation over such sponsored contractor. Each of TOML and NORI is subject to the registration and incorporation requirements of these nations. In the event the sponsorship is otherwise terminated, such subsidiary will be required to obtain new sponsorship from another nation that is a member of the ISA. Failure to obtain such new sponsorship would have a material impact on the operations of such subsidiary and us.

Sponsorship Agreements

On July 5, 2017, Nauru, the Nauru Seabed Minerals Authority and NORI entered into the NORI Sponsorship Agreement formalizing certain obligations of the parties in relation to NORI's exploration and potential exploitation of the NORI Area. Upon reaching the minimum recovery level within the exploitation contract area, NORI will pay Nauru a seabed mineral recovery payment based on the polymetallic nodules recovered from the exploitation contract area. In addition, NORI will pay an administration fee each year to Nauru for such administration and sponsorship, which is subject to review and increase in the event NORI is granted an ISA exploitation contract.

On March 8, 2008, Tonga and TOML entered into the TOML Sponsorship Agreement formalizing certain obligations of the parties in relation to TOML's exploration and potential exploitation of the TOML Area. Upon reaching the minimum recovery level within the exploitation contract area, TOML has agreed to pay Tonga a seabed mineral recovery payment based on the polymetallic nodules recovered from the exploitation contract area. In addition, TOML has agreed to pay the reasonable direct costs incurred by Tonga to administer the obligations of Tonga to the ISA. On September 23, 2021, Tonga updated the TOML Sponsorship Agreement harmonizing the terms of its engagement with TOML with those held by NORI with Nauru.

Allseas Agreements

On March 29, 2019, we entered into a strategic alliance with Allseas to develop a system to collect, lift and transport nodules from the seafloor to shore and agreed to enter into a nodule collection and shipping agreement whereby Allseas would provide commercial services for the collection of the first 200 million metric tonnes of polymetallic nodules on a cost plus 50% profit basis. In furtherance of this agreement, on July 8, 2019, we entered into a Pilot Mining Test Agreement with Allseas ("PMTA"), which was amended on three occasions in 2020 and 2021, to develop and deploy a PMTS, successful completion of which is a prerequisite for our application for an exploitation contract with the ISA. Under the PMTA, Allseas agreed to cover the development cost of the project in exchange for a payment from us upon successful completion of the pilot trial of the PMTS in NORI Area D.

On March 16, 2022, NORI and Allseas entered into a non-binding term sheet for the development and operation of commercial nodule collection system. The pilot nodule collection system developed and currently being tested by Allseas and is expected to be upgraded to a commercial system with a targeted production capacity of 1.3 million tonnes of wet nodules per year with expected production readiness by the fourth quarter of 2024. NORI and Allseas intend to equally finance all costs related to developing and getting the first commercial system. Once in production, NORI expects to pay Allseas a nodule collection and transshipment fee estimated at approximately EUR 150 per wet tonne in the first year of operations and expected to be reduced as Allseas scales up production to 1.3 million wet tonnes per year. The parties intend to further detail and revise these cost estimates in the definitive agreement contemplated by the non-binding term sheet, which the parties expect to enter into no later than December 31, 2022 following the completion of the planned pilot collection tests. Subject to the necessary regulatory approvals Allseas and NORI also intend to investigate acquiring a second production vessel similar to the *Hidden Gem*, a Samsung 10000, with the potential for it to be engineered to support a higher production rate of three million tonnes of wet nodules. There can be no assurances, however, that we will enter into definitive agreements with Allseas contemplated by the non-binding term sheet in a particular time period, or at all, or on terms similar to those set forth in the non-binding term sheet, or that if such definitive agreements are entered into by us that the proposed commercial systems and second production vessel will be successfully developed or operated in a particular time period, or at all.

Through December 31, 2021, we have made the following payments to Allseas under the PMTA: (a) \$10 million in cash in February 2020, (b) \$10 million through the issuance of 3.2 million common shares valued at \$3.11 per share in February 2020, (c) issued Allseas warrants to purchase 11.6 million common shares at a nominal exercise price per share in March 2021 and (d) \$10 million in cash in October 2021, following the Closing and meeting certain progress targets on the PMTS.

As of December 31, 2021, we had the following remaining payment obligations to Allseas under the PMTA: (a) \$10 million on the later of (i) January 1, 2022, and (ii) confirmation of successful completion of the North Sea drive test; and (b) \$10 million upon successful completion of the pilot trial of the PMTS in NORI Area D.

Maersk Agreement

Effective March 15, 2017, we entered into a strategic partnership with Maersk to undertake the exploration, environmental baseline and offshore testing required to support development of feasibility studies for economic production of polymetallic nodules from the CCZ. Under the agreement, Maersk provided vessel services and project management services, which enabled us to undertake the various offshore campaigns to support required pre-feasibility studies. During these offshore campaigns, we undertook baseline studies required to complete an ESIA, collected nodules for metallurgical test work and collected samples and survey data for resource evaluation. The invoiced cost related to the vessel was settled through issuance of common shares at an agreed upon price of \$1.08 per common share. Project management services provided by Maersk for managing these offshore campaigns are paid in cash.

On March 3, 2021, the agreement with Maersk was amended whereby all costs incurred on or after February 5, 2021, pertaining to the use of the marine vessel, would be paid in cash rather than through issuance of common shares. Under this amendment, Maersk also agreed that amounts owed to Maersk for services rendered through February 5, 2021 in the aggregate amount of \$4.6 million had been satisfied by the issuance of 4.2 million common shares at a contractual price per share of \$1.08.

Our agreement with Maersk ended pursuant to its terms in January 2022. We are seeking proposals from third parties to provide a survey vessel, and specialized ROV and AUV services required to support the implementation of the collector test monitoring survey planned for 2022.

Offtake Agreement

On May 25, 2012, DGE and Glencore International AG (“Glencore”) entered into a copper offtake agreement and a nickel offtake agreement. DGE has agreed to deliver to Glencore 50% of the annual quantity of copper and nickel produced by a DGE-owned facility from nodules derived from the NORI Area at London Metal Exchange referenced market pricing with allowances for product quality and delivery location. Either party may terminate the agreement upon a material breach or insolvency of the other party. Glencore may also terminate the agreement by giving twelve months’ notice.

Off-balance sheet arrangements

We are not party to any off-balance sheet arrangements.

Critical Accounting Policies and Estimates

Our financial statements have been prepared in accordance with U.S. GAAP. In the preparation of these financial statements, we are required to use judgment in making estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities as of the date of the financial statements, as well as the reported expenses incurred during the reporting periods.

We consider an accounting judgment, estimate or assumption to be critical when (1) the estimate or assumption is complex in nature or requires a high degree of judgment and (2) the use of different judgments, estimates and assumptions could have a material impact on the consolidated financial statements. Our significant accounting policies are described in Note 2 to our audited consolidated financial statements included in this prospectus. We have the critical accounting policies and estimates which are described below.

TOML Acquisition

On March 31, 2020, we completed the TOML Acquisition and applied guidance from ASC 805 to understand the accounting treatment regarding this acquisition and make necessary judgements.

ASC 805 defines a business as inputs and processes, when applied to the inputs, resulting in the creation of outputs. The key input acquired in connection with the TOML Acquisition is the TOML Exploration Contract and the related intellectual property. TOML Exploration Contract is in the exploration stage and therefore does not produce outputs. ASC 805 requires that where there is no output, there must be both an input and substantive process which must include an organized workforce with the necessary skills, experience, and knowledge to develop and convert the inputs into outputs, for a group of assets to be considered a business. An organized workforce was not included in the TOML Acquisition and therefore our management deemed that the TOML Acquisition was not a business acquisition and only an acquisition of a group of assets.

Our position is supported by ASC 805's guidance that if substantially all of the fair value of the gross assets acquired is concentrated in a single identifiable asset or a group of similar identifiable assets, the set is not considered a business. We determined that the value of TOML Acquisition was substantially concentrated in the TOML Exploration Contract.

Our management also determined that other assets acquired (which included other intangible assets, such as patents and trademarks) were connected to the TOML Exploration Contract and would not hold value by themselves. Consequently, the total cost of the transaction was primarily allocated to exploration contracts.

Value of Common Share-Based Payments

We recognize the cost of share-based awards granted to employees and directors based on the estimated grant-date fair value of the awards. We determine the fair value of stock options using the Black-Scholes option pricing model, which is impacted by the following assumptions:

- Fair Value of Common Shares on the Date of the Grant — We used the price of the most recent private placements to assess the value of our shares on the date of the grant of incentive stock options.
- Expected Term — We used the term of the award when calculating the expected term due to insufficient historical exercise data.
- Expected Volatility — As our common shares were not actively traded, the volatility is based on a benchmark of comparable companies within the mining industry.
- Expected Dividend Yield — The dividend rate used is zero as we have never paid any cash dividends on our Common Shares and do not anticipate doing so in the foreseeable future.
- Risk-Free Interest Rate — The interest rates used are based on the implied yield available on Canadian Treasury zero-coupon issues with an equivalent remaining term equal to the expected life of the award.

This valuation approach involves the use of estimates, judgments and assumptions that are subjective, such as those regarding the probability of future events. Changes in these estimates and assumptions impact our valuation as of the valuation date and may have a material impact on the valuation of the Company's common shares. Changes in these assumptions used to determine the fair value of incentive stock options, including the vesting timeline of granted stock options, could have a material impact on our loss and comprehensive loss.

Valuation of warrant liability

We re-measure the fair value of the Private Warrants at the end of each reporting period. The fair value of the Private Warrants is estimated using a Black-Scholes option pricing model whereby the expected volatility is estimated using a binomial model based on consideration of the implied volatility from the Company's Public Warrants adjusted to account for the call feature of the Public Warrants at prices above \$18.00 during 20 trading days within any 30-trading day period.

Recent Accounting Pronouncements

See Note 2 to the audited consolidated financial statements included in this prospectus for more information about recent accounting pronouncements, the timing of their adoption, and our assessment, to the extent we have made one, of their potential impact on our financial condition and our results of operations and cash flows.

Emerging Growth Company Status

Section 102(b)(1) of the Jumpstart Our Business Startups (“JOBS”) Act exempts emerging growth companies from being required to comply with new or revised financial accounting standards until private companies are required to comply with the new or revised financial accounting standards. The JOBS Act provides that a company can choose not to take advantage of the extended transition period and comply with the requirements that apply to non-emerging growth companies, and any such election to not take advantage of the extended transition period is irrevocable.

We are an “emerging growth company” as defined in Section 2(a) of the Securities Act and have elected to take advantage of the benefits of the extended transition period for new or revised financial accounting standards. Following the Closing, we expect to remain an emerging growth company at least through the end of the 2021 fiscal year and we expect to continue to take advantage of the benefits of the extended transition period, although we may decide to early adopt such new or revised accounting standards to the extent permitted by such standards. This may make it difficult or impossible to compare our financial results with the financial results of another public company that is either not an emerging growth company or is an emerging growth company that has chosen not to take advantage of the extended transition period exemptions because of the potential differences in accounting standards used.

Quantitative and Qualitative Disclosures About Market Risk

We are exposed to a variety of markets and other risks including the effects of change in interest rates, inflation and foreign currency translation and transaction risks as well as risks to the availability of funding sources, hazard events and specific asset risks. We also expect to be exposed to commodity risks if and when we commence commercial production.

Interest Rate Risk and Credit Risk

Interest rate risk is the risk that the fair value of our future cash flows and our financial instruments will fluctuate because of changes in market interest rates.

Our current practice is to invest excess cash in investment-grade short-term deposit certificates issued by reputable Canadian financial institutions with which we keep our bank accounts and management believes the risk of loss to be remote. We periodically monitor the investments we make and are satisfied with the credit ratings of our banks. Due to the current low interest rate environment, we have not invested any cash in investments earning interest as at December 31, 2021.

Credit risk is a risk of loss that may arise on outstanding financial instruments should a counter party default on its obligation. Our receivables consist primarily of general sales tax due from the Federal Government of Canada and as a result, the risk of default is considered to be low. Once we commence commercial production, we expect our credit risk to rise with our increased customer base.

Foreign Currency Risk

Foreign currency risk is the risk that the fair value or future cash flows of an exposure will fluctuate because of changes in foreign exchange rates. Our exposure to the risk of changes in foreign exchange rates relates our transactions in foreign currencies, primarily in the Canadian dollar, the Australian dollar, and the Great British Pound. We primarily hold our cash in U.S. dollars and settle our foreign currency payables soon after the receipt of invoices thereby minimizing the foreign currency exposure.

Once we commence commercial production, we expect to be exposed to both currency transaction and translation risk. To date, we have not had material exposure to foreign currency fluctuations and have not hedged such exposure, although we may do so in the future.

Commodity Price Risk

We expect to engage in the collection, transport, processing and sale of products containing nickel, copper, manganese and cobalt from the polymetallic nodules collected from our contract areas of the CCZ. Accordingly, we expect the principal source of future revenue to be the sale of products containing nickel, copper, manganese and cobalt. A significant and sustained decrease in the price of these metals from current levels could have a material and negative impact on our business, financial condition and results of operations.

DESCRIPTION OF SECURITIES

The following summary of the material terms of the capital stock of TMC the metals company Inc. (formerly Sustainable Opportunities Acquisition Corp.) is not intended to be a complete summary of the special rights and restrictions of such securities, and is qualified by reference to the Notice and Articles and the provisions of applicable law, including British Columbia law, the BCBCA and the warrant-related documents described herein, each of which are incorporated by reference as an exhibit to the registration statement of which this prospectus is a part. We urge you to read each of the Notice and Articles and the warrant-related documents described herein in their entirety for a complete description of the special rights and restrictions of our securities. Unless the context requires otherwise, all references to “we”, “us,” “our,” the “Company” and “TMC” in this section refer solely to TMC the metals company Inc. (formerly Sustainable Opportunities Acquisition Corp.) and not to our subsidiaries.

Authorized Share Capital

We are authorized to issue (a) an unlimited number of Common Shares, without par value (“Common Shares”), (b) an unlimited number of preferred shares, issuable in series, (c) 5,000,000 Class A Special Shares (“Class A Special Shares”), (d) 10,000,000 Class B Special Shares (“Class B Special Shares”), (e) 10,000,000 Class C Special Shares (“Class C Special Shares”), (f) 20,000,000 Class D Special Shares (“Class D Special Shares”) (g) 20,000,000 Class E Special Shares (“Class E Special Shares”), (h) 20,000,000 Class F Special Shares (“Class F Special Shares”), (i) 25,000,000 Class G Special Shares (“Class G Special Shares”), (j) 25,000,000 Class H Special Shares (“Class H Special Shares”), (k) 500,000 Class I Special Shares (“Class I Special Shares”) and (l) 741,000 Class J Special Shares (“Class J Special Shares”), each without par value.

Common Shares

Holders of Common Shares are entitled to one (1) vote per share on all matters upon which holders of shares are entitled to vote. Subject to the BCBCA and prior rights of the holders of preferred shares and any other class ranking senior to the Common Shares, the holders of Common Shares are entitled to receive dividends as, if and when declared by the board of directors. Subject to the prior rights of the holders of special shares (“Special Shares”) and preferred shares, and any other class ranking senior to the Common Shares, in the event of our liquidation, dissolution or winding-up or other distribution of our assets among our shareholders, the holders of Common Shares will be entitled to share *pro rata* in the distribution of the balance of our assets. Holders of Common Shares will have no pre-emptive or conversion or exchange rights or other subscription rights. There are no redemption, retraction, purchase for cancellation or surrender provisions or sinking or purchase fund provisions applicable to Common Shares. There is no provision in the Notice and Articles requiring holders of Common Shares to contribute additional capital, or permitting or restricting the issuance of additional securities of authorized share capital or any other material restrictions. The special rights or restrictions attached to Common Shares are subject to and may be adversely affected by, the rights attached to any series of preferred shares that the board of directors may designate in the future.

Preferred Shares

We are authorized to issue an unlimited number of preferred shares, issuable in series. Accordingly, the board of directors is authorized, without shareholder approval but subject to the provisions of the BCBCA and the Articles, to determine the maximum number of shares of each series, create an identifying name for each series and attach such special rights or restrictions, including dividend, liquidation and voting rights, as the board of directors may determine, and such special rights or restrictions, including dividend, liquidation and voting rights, may be superior to those of the Common Shares. The issuance of preferred shares, while providing flexibility in connection with possible acquisitions and other corporate purposes, could, among other things, have the effect of delaying, deferring or discouraging potential acquisition proposals and might adversely affect the market price of the Common Shares and the voting and other rights of the holders of Common Shares. We have no current plan to issue any preferred shares.

Special Shares

Holders of Special Shares are not entitled to any voting rights, except as required under the BCBCA in certain circumstances, and are not entitled to receive dividends. Subject to the prior rights of the holders of preferred shares, in the event of our liquidation, dissolution or winding-up or other distribution of our assets among our shareholders, the holders of Special Shares will be entitled to receive an amount equal to \$0.0000000001 per Special Share (the “Redemption Price”). Holders of Special Shares have no pre-emptive or exchange rights or other subscription rights. There is no provision in the Notice and Articles requiring holders of Special Shares to contribute additional capital. The special rights or restrictions attached to Special Shares are subject to and may be adversely affected by, the rights attached to any series of preferred shares that the board of directors may designate in the future. The Notice and Articles provide that the Special Shares may not be, directly or indirectly, sold, transferred, assigned, pledged, mortgaged, exchanged, hypothecated or encumbered without the prior approval of the board of directors, which shall only be given under certain circumstances specified in the Notice and Articles (a “Permitted Transfer”). Notwithstanding the foregoing, any holder of Special Shares may, at any time, provide an irrevocable direction and agreement in favor of us that a proposed transfer shall be deemed not to be a Permitted Transfer and that irrevocable direction may provide that any other Permitted Transfer shall require that the transferee provide an identical type of irrevocable direction and agreement.

Subject to the provisions of the BCBCA, any Special Shares then outstanding shall be redeemed by us without any action on the part of the holders of Special Shares (i) at any time after the 15th year anniversary of the original issue date of the Special Shares or (ii) at any time after a Change of Control, in each case at the Redemption Price. For the purposes of the Notice and Articles, “Change of Control” means any transaction or series of related transactions (x) under which any person or one or more persons that are affiliates or that are acting as a “group” (as defined in Section 13(d)(3) of the Exchange Act), directly or indirectly, acquires or otherwise purchases (i) the Company or (ii) all or a material portion of assets, businesses or our Equity Securities (as defined below) or (y) that results, directly or indirectly, in the shareholders of TMC as of immediately prior to such transaction holding, in the aggregate, less than 50% of the voting Equity Securities immediately after the consummation thereof (excluding, for the avoidance of doubt, any Special Shares and the Common Shares issuable upon conversion thereof) (in the case of each of clause (x) and (y), whether by amalgamation, merger, consolidation, arrangement, tender offer, recapitalization, purchase or issuance of Equity Securities or otherwise), and “Equity Securities” shall refer to Common Shares, the preferred shares, Special Shares or any other class of shares or series thereof in the capital of the Company or similar interest in the Company (including any stock appreciation, phantom stock, profit participation or similar rights), and any option, warrant, right or security (including debt securities) convertible, exchangeable or exercisable therefor.

The Special Shares will automatically convert into Common Shares on a one (1) for one (1) basis (the “Conversion Rate”) (unless adjusted as described below) upon the occurrence of the following events:

- in the case of the Class A Special Shares, if (a) on any twenty (20) trading days within any thirty (30) trading day period, the Common Shares trade on the principal securities exchange or securities market on which Common Shares are then traded for a price that is greater than or equal to US \$15.00, or (b) there occurs any transaction resulting in a Change of Control with a valuation of the Common Shares that is greater than or equal to US \$15.00 per Common Share;
- in the case of the Class B Special Shares, if (a) on any twenty (20) trading days within any thirty (30) trading day period, the Common Shares trade on the principal securities exchange or securities market on which Common Shares are then traded for a price that is greater than or equal to US \$25.00, or (b) there occurs any transaction resulting in a Change of Control with a valuation of the Common Shares that is greater than or equal to US \$25.00 per Common Share;
- in the case of the Class C Special Shares, if (a) on any twenty (20) trading days within any thirty (30) trading day period, the Common Shares trade on the principal securities exchange or securities market on which Common Shares are then traded for a price that is greater than or equal to US \$35.00, or (b) there occurs any transaction resulting in a Change of Control with a valuation of the Common Shares that is greater than or equal to US \$35.00 per Common Share;
- in the case of the Class D Special Shares, if (a) on any twenty (20) trading days within any thirty (30) trading day period, the Common Shares trade on the principal securities exchange or securities market on which Common Shares are then traded for a price that is greater than or equal to US \$50.00, or (b) there occurs any transaction resulting in a Change of Control with a valuation of the Common Shares that is greater than or equal to US \$50.00 per Common Share;
- in the case of the Class E Special Shares, if (a) on any twenty (20) trading days within any thirty (30) trading day period, the Common Shares trade on the principal securities exchange or securities market on which Common Shares are then traded for a price that is greater than or equal to US \$75.00, or (b) there occurs any transaction resulting in a Change of Control with a valuation of the Common Shares that is greater than or equal to US \$75.00 per Common Share;

- in the case of the Class F Special Shares, if (a) on any twenty (20) trading days within any thirty (30) trading day period, the Common Shares trade on the principal securities exchange or securities market on which Common Shares are then traded for a price that is greater than or equal to US \$100.00, or (b) there occurs any transaction resulting in a Change of Control with a valuation of the Common Shares that is greater than or equal to US \$100.00 per Common Share;
- in the case of the Class G Special Shares, if (a) on any twenty (20) trading days within any thirty (30) trading day period, the Common Shares trade on the principal securities exchange or securities market on which Common Shares are then traded for a price that is greater than or equal to US \$150.00, or (b) there occurs any transaction resulting in a Change of Control with a valuation of the Common Shares that is greater than or equal to US \$150.00 per Common Share;
- in the case of the Class H Special Shares, if (a) on any twenty (20) trading days within any thirty (30) trading day period, the Common Shares trade on the principal securities exchange or securities market on which Common Shares are then traded for a price that is greater than or equal to US \$200.00, or (b) there occurs any transaction resulting in a Change of Control with a valuation of the Common Shares that is greater than or equal to US \$200.00 per Common Share;
- in the case of the Class I Special Shares, if (a) on any twenty (20) trading days within any thirty (30) trading day period, the Common Shares trade on the principal securities exchange or securities market on which Common Shares are then traded for a price that is greater than or equal to US \$50.00, or (b) there occurs any transaction resulting in a Change of Control with a valuation of the Common Shares that is greater than or equal to US \$50.00 per Common Share; and
- in the case of the Class J Special Shares, if (a) on any twenty (20) trading days within any thirty (30) trading day period, the Common Shares trade on the principal securities exchange or securities market on which Common Shares are then traded for a price that is greater than or equal to US \$12.00, or (b) there occurs any transaction resulting in a Change of Control with a valuation of the Common Shares that is greater than or equal to US \$12.00 per Common Share.

No fractional Common Share will be issued upon the conversion of the Special Shares. Rather, the holders of Special Shares shall be entitled to the number of Common Shares determined by rounding the entitlement down to the nearest whole number.

In the event that the Common Shares are at any time sub-divided, consolidated, converted or exchanged for a greater or lesser number of shares of the same or another class, then appropriate adjustments will be made in the rights and conditions attaching to the Special Shares so as to preserve in all respects the benefits of the holders of Special Shares.

In the event of any merger, amalgamation, consolidation, arrangement, reorganization or other business combination involving the Company with another entity, other than a Change of Control, the holders of Special Shares will be entitled to receive, on conversion, such securities or other property as if on the effective date of the event they were registered holders of the number of Common Shares which such holders of Special Shares were entitled to receive upon conversion of their Special Shares.

Warrants

Public Warrants

As of February 28, 2022, there were an aggregate of 15,000,000 Public Warrants, which entitle the holder to acquire Common Shares. Each whole public warrant entitles the registered holder to purchase one Common Share at an exercise price of \$11.50 per share, subject to adjustment as discussed below, beginning on October 9, 2021. Pursuant to the warrant agreement, a warrant holder may exercise its warrants only for a whole number of Common Shares. This means only a whole warrant may be exercised at a given time by a warrant holder. No fractional warrants will be issued upon separation of the units, and only whole warrants will trade. Accordingly, unless you hold at least three units, you will not be able to receive or trade a whole warrant. The warrants will expire on September 9, 2026, at 5:00 p.m., New York City time, or earlier upon redemption or liquidation.

We will not be obligated to deliver any Common Shares pursuant to the exercise of a warrant and will have no obligation to settle such warrant exercise unless a registration statement under the Securities Act with respect to the Common Shares underlying the warrants is then effective and a prospectus relating thereto is current, subject to our satisfying our obligations described below with respect to registration, or a valid exemption from registration is available. No warrant will be exercisable and we will not be obligated to issue a Common Share upon exercise of a warrant unless the Common Share issuable upon such warrant exercise has been registered, qualified or deemed to be exempt under the securities laws of the state of residence of the registered holder of the warrants. In the event that the conditions in the two immediately preceding sentences are not satisfied with respect to a warrant, the holder of such warrant will not be entitled to exercise such warrant and such warrant may have no value and expire worthless. In no event will we be required to net cash settle any warrant. In the event that a registration statement is not effective for the exercised warrants, the purchaser of a unit containing such warrant will have paid the full purchase price for the unit solely for the Common Share underlying such unit.

Redemptions

Once the warrants become exercisable, we may call the warrants for redemption:

- in whole and not in part;
- at a price of \$0.01 per warrant;
- upon not less than 30 days' prior written notice of redemption to each warrant holder; and
- if, and only if, the closing price of the Common Shares equals or exceeds \$18.00 per share (as adjusted for share splits, share capitalizations, reorganizations, recapitalizations and the like) for any 20 trading days within a 30-trading day period ending on the third trading day prior to the date on which notice of the redemption is given to the warrant holder.

If and when the warrants become redeemable by us, we may exercise our redemption right even if we are unable to register or qualify the underlying securities for sale under all applicable state securities laws.

We have established the last of the redemption criterion discussed above to prevent a redemption call unless there is at the time of the call a significant premium to the warrant exercise price. If the foregoing conditions are satisfied and we issue a notice of redemption of the warrants, each warrant holder will be entitled to exercise his, her or its warrant prior to the scheduled redemption date. However, the price of the Common Shares may fall below the \$18.00 redemption trigger price (as adjusted for share splits, share capitalizations, reorganizations, recapitalizations and the like) as well as the \$11.50 (for whole shares) warrant exercise price after the redemption notice is issued.

Redemption procedures and cashless exercise

If we call the warrants for redemption when the price per share of Common Shares equals or exceeds \$18.00, our management will have the option to require any holder that wishes to exercise his, her or its warrant to do so on a “cashless basis” beginning on the third trading day prior to the date on which notice of the redemption is given to the holders of warrants. In determining whether to require all holders to exercise their warrants on a “cashless basis,” our management will consider, among other factors, our cash position, the number of warrants that are outstanding and the dilutive effect on our shareholders of issuing the maximum number of Common Shares issuable upon the exercise of our warrants. If our management takes advantage of this option, all holders of warrants would pay the exercise price by surrendering their warrants for that number of shares equal to the lesser of (A) the quotient obtained by dividing (x) the product of the number of Common Shares underlying the warrants, multiplied by the excess of the “fair market value” (defined below) over the exercise price of the warrants by (y) the fair market value and (B) 0.365. The “fair market value” will mean the average closing price of the Common Shares for the ten (10) trading days ending on the third trading day prior to the date on which the notice of redemption is sent to the holders of warrants. If our management takes advantage of this option, the notice of redemption will contain the information necessary to calculate the number of Common Shares to be received upon exercise of the warrants, including the “fair market value” in such case. Requiring a cashless exercise in this manner will reduce the number of shares to be issued and thereby lessen the dilutive effect of a warrant redemption. We believe this feature is an attractive option to us if we do not need the cash from the exercise of the warrants after our initial business combination. If we call our warrants for redemption and our management team does not take advantage of this option, the Sponsor and its permitted transferees would still be entitled to exercise their private placement warrants for cash or on a cashless basis using the same formula described above that other warrant holders would have been required to use had all warrant holders been required to exercise their warrants on a cashless basis, as described in more detail below.

A holder of a warrant may notify us in writing in the event it elects to be subject to a requirement that such holder will not have the right to exercise such warrant, to the extent that after giving effect to such exercise, such person (together with such person’s affiliates), to the warrant agent’s actual knowledge, would beneficially own in excess of 4.9% or 9.8% (as specified by the holder) of the Common Shares issued and outstanding immediately after giving effect to such exercise.

Anti-dilution adjustments

If the number of outstanding Common Shares is increased by a capitalization or share dividend payable in Common Shares, or by a split-up of common shares or other similar event, then, on the effective date of such capitalization or share dividend, split-up or similar event, the number of Common Shares issuable on exercise of each warrant will be increased in proportion to such increase in the outstanding common shares. A rights offering made to all or substantially all holders of common shares entitling holders to purchase Common Shares at a price less than the “historical fair market value” (as defined below) will be deemed a share dividend of a number of Common Shares equal to the product of (i) the number of Common Shares actually sold in such rights offering (or issuable under any other equity securities sold in such rights offering that are convertible into or exercisable for Common Shares) and (ii) one minus the quotient of (x) the price per Common Shares paid in such rights offering and (y) the historical fair market value. For these purposes, (i) if the rights offering is for securities convertible into or exercisable for Class A ordinary shares, in determining the price payable for Common Shares, there will be taken into account any consideration received for such rights, as well as any additional amount payable upon exercise or conversion and (ii) “historical fair market value” means the volume weighted average price of Common Shares as reported during the 10 trading day period ending on the trading day prior to the first date on which the Common Shares trade on the applicable exchange or in the applicable market, regular way, without the right to receive such rights.

In addition, if we, at any time while the warrants are outstanding and unexpired, pay a dividend or make a distribution in cash, securities or other assets to all or substantially all the holders of Common Shares on account of such shares (or other securities into which the warrants are convertible), other than (a) as described above, (b) any cash dividends or cash distributions which, when combined on a per share basis with all other cash dividends and cash distributions paid on the Common Shares during the 365-day period ending on the date of declaration of such dividend or distribution does not exceed \$0.50 (as adjusted to appropriately reflect any other adjustments and excluding cash dividends or cash distributions that resulted in an adjustment to the exercise price or to the number of Common Shares issuable on exercise of each warrant) but only with respect to the amount of the aggregate cash dividends or cash distributions equal to or less than \$0.50 per share, or (c) to satisfy the redemption rights of the holders of Common Shares in connection with the Business Combination, then the warrant exercise price will be decreased, effective immediately after the effective date of such event, by the amount of cash and/or the fair market value of any securities or other assets paid on each share of Common Shares in respect of such event.

If the number of outstanding Common Shares is decreased by a consolidation, combination, reverse share split or reclassification of share of Common Shares or other similar event, then, on the effective date of such consolidation, combination, reverse share split, reclassification or similar event, the number of Common Shares issuable on exercise of each warrant will be decreased in proportion to such decrease in outstanding Common Shares.

Whenever the number of Common Shares purchasable upon the exercise of the warrants is adjusted, as described above, the warrant exercise price will be adjusted by multiplying the warrant exercise price immediately prior to such adjustment by a fraction (x) the numerator of which will be the number of Common Shares purchasable upon the exercise of the warrants immediately prior to such adjustment and (y) the denominator of which will be the number of Common Shares so purchasable immediately thereafter.

In case of any reclassification or reorganization of the outstanding Common Shares (other than those described above or that solely affects the par value of such Common Shares), or in the case of any merger or consolidation of with or into another company (other than a consolidation or merger in which we are the continuing company and that does not result in any reclassification or reorganization of our outstanding Common Shares), or in the case of any sale or conveyance to another company or entity of the assets or other property of us as an entirety or substantially as an entirety in connection with which we are dissolved, the holders of the warrants will thereafter have the right to purchase and receive, upon the basis and upon the terms and conditions specified in the warrants and in lieu of the Common Shares immediately theretofore purchasable and receivable upon the exercise of the rights represented thereby, the kind and amount of Common Shares or other securities or property (including cash) receivable upon such reclassification, reorganization, merger or consolidation, or upon a dissolution following any such sale or transfer, that the holder of the warrants would have received if such holder had exercised their warrants immediately prior to such event. If less than 70% of the consideration receivable by the holders of Common Shares in such a transaction is payable in the form of Common Shares in the successor entity that is listed for trading on a national securities exchange or is quoted in an established over-the-counter market, or is to be so listed for trading or quoted immediately following such event, and if the registered holder of the warrant properly exercises the warrant within thirty (30) days following public disclosure of such transaction, the warrant exercise price will be reduced as specified in the warrant agreement based on the Black-Scholes value (as defined in the warrant agreement) of the warrant. The purpose of such exercise price reduction is to provide additional value to holders of the warrants when an extraordinary transaction occurs during the exercise period of the warrants pursuant to which the holders of the warrants otherwise do not receive the full potential value of the warrants.

The warrants are issued in registered form under a warrant agreement between Continental Stock Transfer & Trust Company, as warrant agent, and us. The warrant agreement provides that the terms of the warrants may be amended without the consent of any holder to cure any ambiguity or correct any defective provision or correct any mistake, including to conform the provisions of the warrant agreement to the description of the terms of the warrants and the warrant agreement set forth in SOAC's prospectus for its initial public offering, but requires the approval by the holders of at least 50% of the then outstanding public warrants to make any change that adversely affects the interests of the registered holders. You should review a copy of the warrant agreement, which is filed as an exhibit to the registration statement of which this prospectus is a part, for a complete description of the terms and conditions applicable to the warrants.

The warrant holders do not have the rights or privileges of holders of Common Shares and any voting rights until they exercise their warrants and receive Common Shares.

No fractional warrants will be issued upon separation of the units and only whole warrants will trade. If, upon exercise of the warrants, a holder would be entitled to receive a fractional interest in a share, we will, upon exercise, round down to the nearest whole number the number of Common Shares to be issued to the warrant holder.

Private Placement Warrants

As of February 28, 2022, there were 9,500,000 Private Placement Warrants outstanding. The private placement warrants (including the Common Shares issuable upon exercise of the private placement warrants) were not transferable, assignable or salable until October 9, 2021, except pursuant to limited exceptions to our officers and directors and other persons or entities affiliates with the initial purchasers of the private placement warrants, and they are not redeemable by us, except as described above when the prices per share of Common Shares equals or exceeds \$10.00, so long as they are held by Sponsor or its permitted transferees. The Sponsor, or its permitted transferees, has the option to exercise the private placement warrants on a cashless basis. Except as described below, the private placement warrants have terms and provisions that are identical to those of the public warrants. If the private placement warrants are held by holders other than Sponsor or its permitted transferees, the private placement warrants will be redeemable by us and exercisable by the holders on the same basis as the public warrants. The private placement warrants were transferred to permitted transferees in December 2021.

Except as described above regarding redemption procedures and cashless exercise in respect of the public warrants, if holders of the private placement warrants elect to exercise them on a cashless basis, they would pay the exercise price by surrendering his, her or its warrants for that number of Common Shares equal to the quotient obtained by dividing (x) the product of the number of Common Shares underlying the warrants, multiplied by the excess of the “fair market value” (defined below) over the exercise price of the warrants by (y) the fair market value. The “fair market value” shall mean the average reported closing price of the Common Shares for the ten (10) trading days ending on the third trading day prior to the date on which the notice of warrant exercise is sent to the warrant agent.

Allseas Warrant

On March 4, 2021, DeepGreen issued the Allseas Warrant to Allseas, which shall vest upon successful completion of the PMTS and become exercisable for a maximum of 11,578,620 DeepGreen Common Shares (as it may be adjusted based on the formula described therein) at a purchase price of \$0.01 per share, and which is a warrant to purchase our Common Shares in accordance with the terms of the Allseas Warrant. The Allseas Warrant was issued to Allseas in lieu of any future obligation to issue the Success Fee Shares. The Allseas Warrant shall vest only upon (and not before) the successful completion of the PMTS. The Warrant Credit Value shall be determined as of June 1, 2022 based on the closing trading price of the Common Shares. In the event that the Warrant Credit Value is greater than \$150,000,000, then on the vesting date of the Allseas Warrant, we shall receive a “credit” for the amount by which such Warrant Credit Value exceeds \$150,000,000. We will be able to exchange such credit value for future goods and services from Allseas. No amount will be due or receivable under the Allseas Warrant if the Warrant Credit Value is under \$150,000,000 on June 1, 2022. The Allseas Warrant shall expire on September 30, 2026.

Registration Rights

At the Closing, we, the initial shareholders, including the Sponsor (the “Sponsor Group Holders”), and certain holders of Legacy DeepGreen securities immediately prior to the Effective Time (the “DeepGreen Holders”) entered into an amended and restated registration rights agreement (the “Amended and Restated Registration Rights Agreement”), pursuant to which, among other things, the Sponsor Group Holders and the DeepGreen Holders were granted certain registration rights with respect to their respective Common Shares on the terms and subject to the conditions therein. Additionally, pursuant to subscription agreements entered into on March 4, 2021, certain investors purchased Common Shares immediately prior to the Closing, which provide these investors with certain registration rights.

Lock-Up Restrictions

Under the Amended and Restated Registration Rights Agreement, the Sponsor Group Holders and the DeepGreen Holders also agreed not to effect any sale or distribution of certain of our equity securities held by them during the period ending on the earlier of (A) 180 days after the Closing, which ended on March 8, 2022, and (B) the date on which (x) the Common Shares have traded at a price that is greater than or equal to \$12.00 per share (as adjusted for stock splits, stock dividends, reorganizations, recapitalizations and the like) during any 20 trading days within any 30 consecutive trading days after the Closing, or (y) we complete a liquidation, merger, stock exchange, reorganization or other similar transaction that results in all of our public shareholders having the right to exchange their Common Shares for cash, securities or other property. Certain Common Shares held by the Sponsor Group Holders shall not be offered, sold, pledged or distributed for periods of six months, which ended on March 8, 2022, or twelve months, as applicable, and certain Common Shares held by the DeepGreen Holders shall not be offered, sold, pledged or distributed for periods of six months, which ended on March 8, 2022, or eighteen months, as applicable, subject to the exceptions described in the Amended and Restated Registration Rights Agreement.

Certain Important Provisions of the Notice and Articles and the BCBCA

The following is a summary of certain important provisions of our Articles and certain related sections of the BCBCA. Please note that this is only a summary and is not intended to be exhaustive. This summary is subject to, and is qualified in its entirety by reference to, the provisions of our Articles and the BCBCA.

Stated Objects or Purposes

The Notice and Articles do not contain stated objects or purposes and do not place any limitations on the business that we may carry on.

Directors

Power to vote on matters in which a director is materially interested. Under the BCBCA, a director or senior officer of a company is liable to account to the company for any profit that accrues to the director or senior officer under or as a result of a contract or transaction in which the director or officer holds a disclosable interest if the contract or transaction is material to the company, the company has entered, or proposes to enter, into the contract or transaction, and either the director or senior officer has a material interest in the contract or transaction or is a director or senior officer of, or has a material interest in, a person who has a material interest in the contract or transaction, unless otherwise provided for in the BCBCA. A director or senior officer does not hold a disclosable interest in a contract or transaction if the contract or transaction: (i) is an arrangement by way of security granted by the company for money loaned to, or obligations undertaken by, the director or senior officer, or a person in whom the director or senior officer has a material interest, for the benefit of the company or for one of our affiliates' benefit; (ii) relates to an indemnity or insurance permitted under the BCBCA; (iii) relates to the remuneration of the director or senior officer in his or her capacity as director, officer, employee or agent of the company or of one of its affiliates; (iv) relates to a loan to the company and the director or senior officer, or a person in whom the director or senior officer has a material interest, is the guarantor of some or all of the loan; or (v) is with a company that is affiliated to the company and the director or senior officer is also a director or senior officer of that company or an affiliate of that company.

A director or senior officer who holds a disclosable interest may also be liable to account to the company for any profit that accrues to the director or senior officer under or as a result of a contract or transaction in which the director or senior officer holds a disclosable interest, unless the contract or transaction is: (i) approved by the other non-interested directors (unless all directors have a disclosable interest) or by a special resolution of the shareholders, after the nature and extent of the disclosable interest has been disclosed to the directors or shareholders, as applicable, or (ii) the contract or transaction was entered into before the individual became a director or senior officer, the disclosable interest was disclosed to the other directors or shareholders and the director or senior officer who holds the disclosable interest does not vote on any decision or resolution touching on the contract or transaction. Directors and senior officers are also required to comply with certain other relevant provisions of the BCBCA regarding conflicts of interest. A director who holds such disclosable interest in respect of any material contract or transaction into which the company has entered or propose to enter may be required to absent himself or herself from the meeting while discussions and voting with respect to the matter are taking place.

Directors' power to determine the remuneration of directors. The remuneration of our directors, if any, may be determined by our directors subject to our Articles. The remuneration may be in addition to any salary or other remuneration paid to any of our employees (including executive officers) who are also directors.

Number of shares required to be owned by a director: Our Articles do not and the BCBCA does not provide that a director is required to hold any of Common Shares as a qualification for holding his or her office.

Shareholder Meetings

Subject to applicable exchange requirements, and the BCBCA, we will have to hold a general meeting of our shareholders at least once every year at a time and place determined by our board of directors, provided that the meeting must not be held later than 15 months after the preceding annual general meeting, unless an extension is obtained. A meeting of our shareholders may be held anywhere in or outside British Columbia. The board of directors may also determine that shareholders may attend a meeting of shareholders by means of telephone, electronic or other communications facilities that permit all participants to communicate with each other during the meeting.

A notice to convene a meeting, specifying the date, time and location of the meeting, and, where a meeting is to consider special business, the general nature of the special business, among other things, must be sent to each shareholder entitled to attend the meeting and to each director and the auditors, so long that the company is a public company, not less than 21 days and no more than two months prior to the meeting, although, as a result of applicable securities laws, the minimum time for notice is effectively longer in most circumstances. Under the BCBCA, shareholders entitled to notice of a meeting may waive or reduce the period of notice for that meeting, provided applicable securities laws are met. The accidental omission to send notice of any meeting of shareholders to, or the non-receipt of any notice by, any person entitled to notice does not invalidate any proceedings at that meeting.

A quorum for meetings of shareholders is present if at least two shareholders who, in the aggregate, hold at least 5% of the issued shares entitled to vote at the meeting, are present in person or represented by proxy at the meeting. If a quorum is not present within one half hour from the time set for the opening of any meeting of shareholders, the meeting stands adjourned to the same day in the next week at the same time and place, unless the meeting was requisitioned by shareholders, in which case the meeting is dissolved.

Holders of Common Shares are entitled to attend and vote at meetings of our shareholders except meetings at which only holders another class of shares are entitled to vote. Except as otherwise provided with respect to any particular series of preferred shares or Special Shares, and except as otherwise required by law, the holders of our preferred shares and/or Special Shares are not entitled to vote at any meetings of our shareholders. Our directors and officers, our auditor and any other persons invited by our directors or the chair of the meeting are entitled to attend any meeting of our shareholders but will not be counted in the quorum or be entitled to vote at the meeting unless he or she is a shareholder or proxyholder entitled to vote at the meeting.

Shareholder Proposals and Advance Notice Procedures

Under the BCBCA, qualified shareholders holding at least either (i) 1% of the Common Shares or (ii) Common Shares with a fair market value in excess of CAD\$2,000 may make proposals for matters to be considered at the annual general meeting of shareholders. Such proposals must be sent to us in advance of any proposed meeting by delivering a timely written notice in proper form to our registered office in accordance with the requirements of the BCBCA. The notice must include information on the business the shareholder intends to bring before the meeting. To be a qualified shareholder, a shareholder must currently be and have been a registered or beneficial owner of at least one Common Share for at least two years before the date of signing the proposal.

Certain advance notice provisions with respect to the election of our directors are included in the Notice and Articles (the "Advance Notice Provisions"). The Advance Notice Provisions are intended to: (i) facilitate orderly and efficient annual general meetings or, where the need arises, special meetings; (ii) ensure that all shareholders receive adequate notice of board nominations and sufficient information with respect to all nominees; and (iii) allow shareholders to register an informed vote. Only persons who are nominated in accordance with the Advance Notice Provisions will be eligible for election as directors at any annual meeting of shareholders, or at any special meeting of shareholders if one of the purposes for which the special meeting was called was the election of directors.

Under the Advance Notice Provisions, a shareholder wishing to nominate a director would be required to provide us notice, in the prescribed form, within the prescribed time periods. These time periods include, (i) in the case of an annual meeting of shareholders (including annual and special meetings), not less than 30 days prior to the date of the annual meeting of shareholders; provided, that if the first public announcement of the date of the annual meeting of shareholders (the “Notice Date”) is less than 50 days before the meeting date, not later than the close of business on the 10th day following the Notice Date; and (ii) in the case of a special meeting (which is not also an annual meeting) of shareholders called for any purpose which includes electing directors, not later than the close of business on the 15th day following the Notice Date.

These provisions could have the effect of delaying until the next shareholder meeting the nomination of certain persons for director that are favored by the holders of a majority of our outstanding voting securities.

Forum Selection

The Notice and Articles include a forum selection provision that provides that, unless we consent in writing to the selection of an alternative forum, the Supreme Court of British Columbia, Canada and the appellate courts therefrom, are the sole and exclusive forum for (i) any derivative action or proceeding brought on our behalf; (ii) any action or proceeding asserting a claim of breach of a fiduciary duty owed by any of our directors, officers, or other employees to our company; (iii) any action or proceeding asserting a claim arising pursuant to any provision of the BCBCA or the Notice and Articles (as each may be amended from time to time); or (iv) any action or proceeding asserting a claim otherwise related to the relationships among us, our affiliates and our respective shareholders, directors and/or officers, but excluding claims related to our business or of such affiliates. The forum selection provision also provides that our securityholders are deemed to have consented to personal jurisdiction in the Province of British Columbia and to service of process on their counsel in any foreign action initiated in violation of the foregoing provisions. This provision does not apply to suits brought to enforce any duty or liability created by the Securities Act or the Exchange Act, or the rules and regulations thereunder.

For claims brought under the Securities Act, Section 22 of the Securities Act creates concurrent jurisdiction for federal and state courts over all claims brought to enforce any duty or liability created by the Securities Act or the rules and regulations thereunder and the Notice and Articles provides that the federal district courts of the United States of America, to the fullest extent permitted by law, are the sole and exclusive forum for resolving any complaint asserting a cause of action arising under the Securities Act (the “Federal Forum Provision”). Application of the Federal Forum Provision means that suits brought by our shareholders to enforce any duty or liability created by the Securities Act must be brought in federal court and cannot be brought in state court.

Section 27 of the Exchange Act creates exclusive federal jurisdiction over all claims brought to enforce any duty or liability created by the Exchange Act or the rules and regulations thereunder. Accordingly, actions by our shareholders to enforce any duty or liability created by the Exchange Act or the rules and regulations thereunder must be brought in federal court. Our shareholders will not be deemed to have waived our compliance with the federal securities laws and the regulations promulgated thereunder.

Any person or entity purchasing or otherwise acquiring or holding any interest in any of Common Shares shall be deemed to have notice of and consented to the aforementioned forum selection provisions, including the Federal Forum Provision. Additionally, our shareholders cannot waive compliance with the federal securities laws and the rules and regulations thereunder. These provisions may limit our shareholders’ ability to bring a claim in a judicial forum they find favorable for disputes with us or our directors, officers, or other employees, which may discourage lawsuits against us and our directors, officers, and other employees. Alternatively, if a court were to find the choice of forum provision contained in the Notice and Articles to be inapplicable or unenforceable in an action, we may incur additional costs associated with resolving such action in other jurisdictions, which could harm our business, operating results and financial condition. See *“Risk Factors – Our Notice of Articles and Articles will provide that any derivative actions, actions relating to breach of fiduciary duties and other matters relating to our internal affairs will be required to be litigated in the Province of British Columbia, Canada, and will contain an exclusive federal forum provision for certain claims under the Securities Act, which could limit your ability to obtain a favorable judicial forum for disputes with us.”*

Limitation of Liability and Indemnification

Under the BCBCA, a company may indemnify: (i) a current or former director or officer of that company; (ii) a current or former director or officer of another company if, at the time such individual held such office, such company was an affiliate of the company, or if such individual held such office at the company's request; or (iii) an individual who, at the request of the company, held, or holds, an equivalent position in another entity (an "indemnifiable person") against all judgments, penalties or fines, or amounts paid to settle a proceeding or an action, in respect of any legal proceeding or investigative action (whether current, threatened, pending or completed) in which he or she is involved because of that person's position as an indemnifiable person (an "eligible proceeding"), unless: (i) the individual did not act honestly and in good faith with a view to the best interests of such company or the other entity, as the case may be; or (ii) in the case of a proceeding other than a civil proceeding, the individual did not have reasonable grounds for believing that the individual's conduct in respect of which proceeding was brought was lawful. A company cannot indemnify an indemnifiable person if it is prohibited from doing so under its articles or by applicable law. A company may pay, as they are incurred in advance of the final disposition of an eligible proceeding, the expenses actually and reasonably incurred, subject to the indemnifiable person providing an undertaking that such person will repay the amounts advanced if it is ultimately determined that the payment of such expenses is prohibited by the BCBCA.

Ownership and Exchange Controls

There is no limitation imposed by Canadian law or by the Notice and Articles on the right of a non-resident to hold or vote Common Shares, other than discussed below.

Competition Act

Limitations on the ability to acquire and hold Common Shares may be imposed by the *Competition Act* (Canada). This legislation permits the Commissioner of Competition (the "Commissioner"), to review any acquisition or establishment, directly or indirectly, including through the acquisition of shares, of control over or of a significant interest in us. This legislation grants the Commissioner jurisdiction, for up to one year after the acquisition has been substantially completed, to challenge this type of acquisition by seeking a remedial order, including an order to prohibit the acquisition or require divestitures, from the Canadian Competition Tribunal, which may be granted where the Competition Tribunal finds that the acquisition substantially prevents or lessens, or is likely to substantially prevent or lessen, competition.

This legislation also requires any person or persons who intend to acquire more than 20% of our voting shares or, if such person or persons already own more than 20% of our voting shares prior to the acquisition, more than 50% of our voting shares, to file a notification with the Canadian Competition Bureau if certain financial thresholds are exceeded. Where a notification is required, unless an exemption is available, the legislation prohibits completion of the acquisition until the expiration of the applicable statutory waiting period, unless the Commissioner either waives or terminates such waiting period or issues an advance ruling certificate. The Commissioner's review of a notifiable transaction for substantive competition law considerations may take longer than the statutory waiting period.

Investment Canada Act

The *Investment Canada Act* requires each "non Canadian" (as defined in the *Investment Canada Act*) who acquires "control" of an existing "Canadian business," to file a notification in prescribed form with the responsible federal government department or departments not later than 30 days after closing, provided the acquisition of control is not a reviewable transaction under the *Investment Canada Act*. Subject to certain exemptions, a transaction that is reviewable under the *Investment Canada Act* may not be implemented until an application for review has been filed and the responsible Minister of the federal cabinet has determined that the investment is likely to be of "net benefit to Canada" taking into account certain factors set out in the *Investment Canada Act*. Under the *Investment Canada Act*, an investment in Common Shares by a non-Canadian who is an investor originating from a country with which Canada has a free trade agreement, including a United States investor, and is not a state-owned enterprise, would be reviewable only if it were an investment to acquire control of us pursuant to the *Investment Canada Act* and our enterprise value (as determined pursuant to the *Investment Canada Act* and its regulations) was equal to or greater than the amount specified, which is currently CAD\$1.711 billion. For most other investors who are not state-owned enterprises the threshold is currently CAD\$1.141 billion for 2022.

The *Investment Canada Act* contains various rules to determine if there has been an acquisition of control. Generally, for purposes of determining whether an investor has acquired control of a corporation by acquiring shares, the following general rules apply, subject to certain exceptions: the acquisition of a majority of the undivided ownership interests in the voting shares of the corporation is deemed to be acquisition of control of that corporation; the acquisition of less than a majority, but one-third or more, of the voting shares of a corporation or of an equivalent undivided ownership interest in the voting shares of the corporation is presumed to be acquisition of control of that corporation unless it can be established that, on the acquisition, the corporation is not controlled in fact by the acquirer through the ownership of voting shares; and the acquisition of less than one-third (1/3) of the voting shares of a corporation or of an equivalent undivided ownership interest in the voting shares of the corporation is deemed not to be acquisition of control of that corporation.

Under the national-security-review regime in the *Investment Canada Act*, review on a discretionary basis may also be undertaken by the federal government in respect to a much broader range of investments by a non-Canadian to “acquire, in whole or part, or to establish an entity carrying on all or any part of its operations in Canada.” No financial threshold applies to a national-security review. The relevant test is whether such investment by a non-Canadian could be “injurious to national security.” The responsible ministers have broad discretion to determine whether an investor is a non-Canadian and therefore subject to national-security review. Review on national-security grounds is at the discretion of the responsible ministers, and may occur on a pre- or post-closing basis.

Certain transactions relating to Common Shares will generally be exempt from the *Investment Canada Act*, subject to the federal government’s prerogative to conduct a national-security review, including:

- the acquisition of Common Shares by a person in the ordinary course of that person’s business as a trader or dealer in securities;
- the acquisition of control of us in connection with the realization of security granted for a loan or other financial assistance and not for any purpose related to the provisions of the *Investment Canada Act*; and
- the acquisition of control of us by reason of an amalgamation, merger, consolidation or corporate reorganization following which the ultimate direct or indirect control in fact of us, through ownership of Common Shares, remains unchanged.

Other

There is no law, governmental decree or regulation in Canada that restricts the export or import of capital, or that would affect the remittance of dividends (if any) or other payments by us to non-resident holders of Common Shares, other than withholding tax requirements.

Transfer Agent and Registrar

The transfer agent for our Common Shares is Continental Stock Transfer & Trust Company.

Stock Exchange Listing

Our Common Shares and Public Warrants to purchase Common Shares are listed for trading on The Nasdaq Stock Market under the symbol “TMC” and “TMCWW”, respectively.

SECURITIES ACT RESTRICTIONS ON RESALE OF COMMON SHARES

Pursuant to Rule 144 under the Securities Act (“Rule 144”), a person who has beneficially owned restricted Common Shares for at least six months would be entitled to sell their securities provided that (i) such person is not deemed to have been our affiliate at the time of, or at any time during the three months preceding, a sale, and (ii) we are subject to the Exchange Act periodic reporting requirements for at least three months before the sale and have filed all required reports under Section 13 or 15(d) of the Exchange Act during the twelve months (or such shorter period as we were required to file reports) preceding the sale.

Persons who have beneficially owned restricted Common Shares for at least six months but who are our affiliates at the time of, or at any time during the three months preceding, a sale, would be subject to additional restrictions, by which such person would be entitled to sell within any three-month period only a number of securities that does not exceed the greater of:

- 1% of the total number of Common Shares then outstanding; or
- the average weekly reported trading volume of the Common Shares during the four calendar weeks preceding the filing of a notice on Form 144 with respect to the sale.

Sales by our affiliates under Rule 144 are also limited by manner of sale provisions and notice requirements and to the availability of our current public information.

Restrictions on the Use of Rule 144 by Shell Companies or Former Shell Companies

Rule 144 is not available for the resale of securities initially issued by shell companies (other than business combination related shell companies) or issuers that have been at any time previously a shell company. However, Rule 144 also includes an important exception to this prohibition if the following conditions are met:

- the issuer of the securities that was formerly a shell company has ceased to be a shell company;
- the issuer of the securities is subject to the reporting requirements of Section 13 or 15(d) of the Exchange Act;
- the issuer of the securities has filed all Exchange Act reports and material required to be filed, as applicable, during the preceding twelve months (or such shorter period that the issuer was required to file such reports and materials), other than Form 8-K reports; and
- at least one year has elapsed from the time that the issuer filed current Form 10 type information with the SEC reflecting its status as an entity that is not a shell company.

Following the Business Combination, we are no longer a shell company, and so, once the conditions set forth in the exceptions listed above are satisfied, Rule 144 will become available for the resale of the above noted restricted securities.

BENEFICIAL OWNERSHIP OF SECURITIES

Security Ownership of Certain Beneficial Owners and Management

The following table sets forth information known to the Company regarding the beneficial ownership of the Common Shares as of February 28, 2022 by:

- each person known to the Company to be the beneficial owner of more than 5% of outstanding Common Shares;
- each of the Company's executive officers and directors; and
- all executive officers and directors of the Company as a group.

Beneficial ownership is determined according to the rules of the SEC, which generally provide that a person has beneficial ownership of a security if he, she or it possesses sole or shared voting or investment power over that security, including options and warrants that are currently exercisable or exercisable within 60 days. Common Shares issuable upon exercise of options and warrants currently exercisable within 60 days are deemed outstanding solely for purposes of calculating the percentage of total ownership and total voting power of the beneficial owner thereof.

The beneficial ownership of Common Shares is based on 226,828,919 Common Shares issued and outstanding as of February 28, 2022.

Unless otherwise indicated, the Company believes that each person named in the table below has sole voting and investment power with respect to all shares of the Common Shares beneficially owned by them. Unless otherwise indicated, the business address of each of the following entities or individuals is c/o TMC the metals company Inc., 595 Howe Street, 10th Floor, Vancouver, British Columbia, Canada V6C 2T5.

(1) Excludes Special Shares.

Table of Contents

- (2) Consists of (i) 14,487,559 Common Shares, (ii) 4,078,044 Common Shares underlying options that are exercisable within 60 days of February 28, 2022, and (iii) 89,394 Common Shares underlying warrants held by Mr. Barron. Does not include 2,275,334 Common Shares underlying options that are not exercisable and 781,250 Common Shares underlying restricted share units that do not vest within 60 days of February 28, 2022 held by Mr. Barron.
- (3) Consists of (i) 575,110 Common Shares held by The O’Sullivan Family Trust No. 1 and 101,372 Common Shares held by Mr. O’Sullivan, (ii) 685,672 Common Shares underlying options that are exercisable within 60 days of February 28, 2022 held by Mr. O’Sullivan. Does not include 1,011,259 Common Shares underlying options that are not exercisable and 312,500 Common Shares underlying restricted share units that do not vest within 60 days of February 28, 2022 held by O’Sullivan. Anthony O’Sullivan is the sole director of JOZEM Pty Ltd. which is the trustee of The O’Sullivan Family Trust No. 1.
- (4) Consists of (i) 301,398 Common Shares held by Ms. Ilves, (ii) 1,362,077 Common Shares underlying options that are exercisable within 60 days of February 28, 2022 held by Ms. Ilves, and (iii) 30,682 Common Shares held of record by Ms. Ilves’ children. Does not include 1,011,259 Common Shares underlying options that are not exercisable and 234,375 Common Shares underlying restricted share units that do not vest within 60 days of February 28, 2022 held by Ms. Ilves.
- (5) Consists of (i) 428,941 Common Shares and (ii) 135,084 Common Shares underlying options that are exercisable within 60 days of February 28, 2022 held by Mr. Shesky. Does not include 522,981 Common Shares underlying options that are not exercisable and 234,375 Common Shares underlying restricted share units that do not vest within 60 days of February 28, 2022 held by Mr. Shesky.
- (6) Consists of (i) 109,903 Common Shares and (ii) 1,323,613 Common Shares underlying options that are exercisable within 60 days of February 28, 2022 held by Mr. Stone. Does not include 505,630 Common Shares underlying options that are not exercisable and 156,250 Common Shares underlying restricted share units that do not vest within 60 days of February 28, 2022 held by Dr. Stone.
- (7) Consists of (i) 21,894 Common Shares held by Ms. Gedeon. Does not include 265,625 Common Shares underlying restricted share units that do not vest within 60 days of February 28, 2022 held by Ms. Gedeon.
- (8) Consists of (i) 151,585 Common Shares held by Ms. Stryker, (ii) 147,672 Common Shares held by the Gina Thomas Stryker 2008 Children’s Trust U/A DTD 12/09/2008 JRT, (iii) 147,672 Common Shares held by the Gina Thomas Stryker 2008 Children’s Trust U/A DTD 12/09/2008 MET, (iv) 209,221 Common Shares underlying warrants held by Ms. Stryker, (v) 202,528 Common Shares underlying warrants held by the Gina Thomas Stryker 2008 Children’s Trust U/A DTD 12/09/2008 JRT and (vi) 202,528 Common Shares underlying warrants held by the Gina Thomas Stryker 2008 Children’s Trust U/A DTD 12/09/2008 MET. Ms. Stryker is the trustee of each of these trusts.
- (9) Consists of 590,509 Common Shares underlying options that are exercisable within 60 days of February 2, 2022 held by Mr. Madsbjerg. Does not include 126,407 Common Shares underlying options that are not exercisable and 8,032 Common Shares underlying restricted share units that do not vest within 60 days of February 28, 2022 held by Mr. Madsbjerg.
- (10) Consists of (i) 642,613 Common Shares underlying options that are exercisable within 60 days of February 28, 2022 held by Mr. Karkar, (ii) 43,620,976 Common Shares held by ERAS Capital LLC (“ERAS”), and (iii) 1,414,716 Common Shares underlying warrants held by ERAS. Does not include 126,407 Common Shares underlying options that are not exercisable and 8,032 Common Shares underlying restricted share units that do not vest within 60 days of February 28, 2022 held by Mr. Karkar. Mr. Karkar has voting and dispositive control over the securities held by ERAS and therefore Mr. Karkar may be deemed to have beneficial ownership of the shares held by ERAS.
- (11) See footnotes 2 through 10.
- (12) The address of ERAS is 323 Marina Boulevard, San Francisco, California 94123. Consists of (i) 43,620,976 Common Shares and (ii) 1,414,716 Common Shares issuable upon exercise of warrants owned by ERAS. Andrei Karkar has voting and dispositive control over the securities held by ERAS and therefore Mr. Karkar may be deemed to have beneficial ownership of the shares held by ERAS.
- (13) The address of Maersk Supply Service A/S is Esplanaden 50 Copenhagen K, DK-1098 Denmark. Maersk Supply Service A/S is a subsidiary of AP Moller-Maersk A/S.
- (14) The address of Allseas Group S.A. is 18 Route de Pra de Plan, Case Postale, 411 1618 Chatel-Saint-Denis, Switzerland. Excludes 1,000,000 Common Shares held by Argentum Cedit Virtuti GCV, which has an ownership interest in Allseas Group S. A., to which Allseas Group, S.A. does not have voting or investment power with respect thereto.

SELLING SECURITYHOLDERS

This prospectus relates to the possible resale by the Selling Securityholders of up to 264,438,297 of our Common Shares and up to 9,500,000 Private Placement Warrants. The Selling Securityholders may from time to time offer and sell any or all of the Common Shares and warrants set forth below pursuant to this prospectus and any accompanying prospectus supplement. When we refer to the “Selling Securityholders” in this prospectus, we mean the persons listed in the table below, and the pledgees, donees, transferees, assignees, successors, designees and others who later come to hold any of the Selling Securityholders’ interest in the Common Shares or Private Placement Warrants other than through a public sale. We cannot advise you as to whether the Selling Securityholders will in fact sell any or all of such Common Shares or warrants. In addition, the Selling Securityholders may sell, transfer or otherwise dispose of, at any time and from time to time, the Common Shares and warrants in transactions exempt from the prospectus or registration requirements of the Securities Act or applicable Canadian securities law after the date of this prospectus. For purposes of this table, we have assumed that the Selling Securityholders will have sold all of the securities covered by this prospectus upon the completion of the offering.

The following table is prepared based on information provided to us by the Selling Securityholders. It sets forth the name and address of each of the Selling Securityholders, the aggregate number of Common Shares and Private Placement Warrants that the Selling Securityholders may offer pursuant to this prospectus, and the beneficial ownership of the Selling Securityholders both before and after the offering. We have based the percentage ownership prior to this offering on 226,828,919 Common Shares and 9,500,000 Private Placement Warrants outstanding, in each case as of February 28, 2022. In calculating percentages of Common Shares owned by a particular Selling Securityholder, we treated as outstanding the number of Common Shares issuable upon exercise of that particular Selling Securityholder’s warrants or options, if any, and did not assume the exercise of any other Selling Securityholder’s warrants or options. The following tables do not reflect the beneficial ownership of any Common Shares issuable upon exercise of warrants, options or Special Shares unless such securities are exercisable or convertible within 60 days of February 28, 2022.

We have determined beneficial ownership in accordance with the rules of the SEC and the information is not necessarily indicative of beneficial ownership for any other purpose. The Common Shares issuable upon conversion of the Special Shares are not beneficially owned by any of the Selling Securityholders and are excluded from the beneficial ownership columns in the table below since the conversions of such Special Shares are subject to the Common Share trading price thresholds described herein. We have included a separate column for the Common Shares issuable upon conversion of the Special Shares. Unless otherwise indicated below, to our knowledge, the persons and entities named in the tables have sole voting and sole investment power with respect to all securities that they beneficially own, subject to community property laws where applicable.

Selling Securityholder information for each additional Selling Securityholder, if any, will be set forth by prospectus supplement to the extent required prior to the time of any offer or sale of such Selling Securityholder’s securities pursuant to this prospectus. Any prospectus supplement may add, update, substitute, or change the information contained in this prospectus, including the identity of each Selling Securityholder and the number of securities registered on its behalf. A Selling Securityholder may sell or otherwise transfer all, some or none of such securities in this offering. See “*Plan of Distribution.*”

Name	Age	Position
Executive Officers:		
Gerard Barron	55	Chief Executive Officer and Chairman of the Board of Directors
Anthony O’Sullivan	55	Chief Development Officer
Erika Ilves	44	Chief Strategy Officer
Craig Shesky	38	Chief Financial Officer
Dr. Gregory Stone	64	Chief Ocean Scientist
Christelle Gedeon	40	Chief Legal Officer
Non-Employee Directors:		
Christian Madsbjerg	47	Director
Andrew Hall	58	Director
Gina Stryker	56	Director
Sheila Khama	64	Director
Andrei Karkar	44	Director
Amelia Kinahoi Siamomua	61	Director
Kathleen McAllister	57	Director

Executive Officers

Gerard Barron has served as our Chief Executive Officer and Chairman of the board of directors since the Closing. Mr. Barron became involved in the early strategic development and financing of DeepGreen during its formation in 2011 and stepped into the role of DeepGreen’s Chairman and Chief Executive Officer in 2018. From July 2013 until becoming Chairman and Chief Executive Officer in 2017, Mr. Barron served as a strategic advisor to the DeepGreen Board and its shareholders. Mr. Barron is a seasoned entrepreneur with a track record of building global companies in battery technology, media and future-oriented resource development both as a chief executive officer and strategic investor. In 2001, Mr. Barron founded Adstream, a global advertising technology and services provider, and served as the company’s Chief Executive Officer until December 2013. During that time, Adstream grew from a single office in Sydney to over 40 offices in 30 countries around the world and over \$100 million in global revenue per year. Mr. Barron has also been a first money investor in industry-leading companies including Nautilus and Sirtex Medical. Mr. Barron’s qualifications to serve as Chief Executive Officer and on the board of directors include his extensive leadership and investment experience in the technology and resource development industries.

Anthony O’Sullivan has served as our Chief Development Officer since the Closing and has served as DeepGreen’s Chief Development Officer since July 25, 2017. Mr. O’Sullivan has over 30 years mining experience with a track record of delivering innovative solutions across multiple continents both in the terrestrial and marine environments. Since January 2020, Mr. O’Sullivan is serving as a non-executive director for SensOre Ltd., a company that performs mineral targeting and was listed on the ASX on February 11, 2022. From February 2017 to December 2019, Mr. O’Sullivan served as the Chief Executive Officer of Sasak Minerals Pty Ltd., a company focused on deploying machine learning and mineral exploration. Since February 2017, Mr. O’Sullivan served as the Principal and Owner of International Resources, a firm focused on creating value through the discovery and development of mineral resources. From November 2014 until January 2017, he served as Vice President Exploration for Quantum Pacific Exploration, where he engaged in planning, development, and management of the exploration company, including developing corporate strategies, overseeing exploration activities, evaluating existing and potential new assets, establishing an exploration team and identifying a suite of new opportunities. In December 2005, Mr. O’Sullivan began serving as Chief Operating Officer of Nautilus, a position he held until December 2012. While serving as Chief Operating Officer of Nautilus, Mr. O’Sullivan led exploration, engineering and design, project development, permitting and product marketing culminating in the declaration of 43-101 compliant resources, grant of the environmental permit and mining lease from the Government of Papua New Guinea, ore sales agreement with one of China’s leading copper producers, Tongling Nonferrous Metals Group, and the completion of project design and commencement of project construction. Mr. O’Sullivan was previously part of the BHP Billiton Global Exploration Leader Team with responsibility for the company’s iron ore, bauxite, coal and non-porphry base metal exploration portfolios. Mr. O’Sullivan is the named co-inventor on five subsea mining patents. Mr. O’Sullivan earned a M.Sc. in Mineral Exploration from the University of Western Australia and a B.Sc. (Hons) in Geology from the University of Western Australia.

Erika Ilves has served as our Chief Strategy Officer since the Closing and has served as DeepGreen’s Head of Strategy and Business Development since September 2018. During her time at DeepGreen, Erika has focused on developing alliances with offshore partners, resource companies and EV supply chain, overseeing DeepGreen lifecycle impact studies as well as developing a transparent provenance strategy to enable DeepGreen to establish clean metals as a new purchasing category. From November 2015 until December 2018, Ms. Ilves served as a director and Head of Machine Learning for OffWorld, Inc., an industrial robotics company that she co-founded, where she led a team of machine learning engineers to develop teachable mining robots. From November 2013 until November 2016, Ms. Ilves also served as Chief Strategy Officer for Shackleton Energy, a company she co-founded, where she developed an international public-private consortium to create technologies to extract water ice from the moon in order to fuel deep space missions from low Earth orbit, drastically reducing the costs of such missions. Ms. Ilves’ 15 years of strategy consulting experience started with McKinsey & Company, where she served global and emerging markets financial institutions on strategy, performance and operational transformations; and later founded the Executive Office which advised governments and investors of the Gulf Cooperation Council on transitioning to a green economy. From 2006 to 2007, Ms. Ilves served as Chief Organization Officer of TANDBERG, an OSE-listed videoconferencing technology firm acquired by Cisco Systems Inc. in 2010, where she was responsible for developing leadership and sales capability for the firm’s global sales force and partner network of over 3,000 people. In 1999, Ms. Ilves attended Emory Law School as a research scholarship recipient. Ms. Ilves earned a LL.M. from the Central European University and a LL.B. magna cum laude from the University of Tartu.

Craig Shesky has served as our Chief Financial Officer since the Closing and has served as DeepGreen’s Head of Financial Markets and Investor Relations since February 2021. Mr. Shesky has over 15 years combined experience in public investing, metals research and investment banking in New York. From August 2008 until July 2020, Mr. Shesky was employed by King Street Capital Management, most recently as senior analyst in charge of recommending investments in the global metals and mining space. Mr. Shesky has analyzed electrification trends, battery chemistries and the resulting impacts on supply and demand for critical base metals, with particular expertise in nickel and copper. He also has significant experience navigating complex, legal-driven investments around the world, as King Street was one of the largest creditors in over a dozen global Lehman Brothers entities. From July 2006 to July 2008, Mr. Shesky served as an analyst on the insurance and asset management investment banking team at Morgan Stanley. Mr. Shesky graduated magna cum laude with a B.S. in Finance from the University of Notre Dame.

Gregory Stone, Ph.D. has served as our Chief Ocean Officer since the Closing and has served as a Director and Chief Ocean Officer of DeepGreen since February 2018. In January 2020, Dr. Stone founded Pole-to-Pole, a non-profit organization with a mission to apply practical solutions to the problems facing Earth's ocean, and has been serving as the organization's Chairman since that time. Dr. Stone is an ocean scientist and explorer with over 10,000 dives throughout Earth's ocean down to 18,000 feet using submarines, SCUBA, underwater habitats and robotics. Dr. Stone is also widely known as a global thought leader who finds ways for humanity and the ocean to co-exist and support each other in the modern world. Dr. Stone was a catalyst at the genesis of the Ocean Health Index, a scientific framework used to measure oceans' health, and specializes in sustainable fishing, aquaculture, climate adaptation and seamount ecology. Dr. Stone's ability to communicate complex science is illustrated by his compelling TED and World Economic Forum talks, and his appearances in documentaries for the Discovery Channel and National Geographic. Dr. Stone has authored hundreds of publications including articles for *Nature*, *National Geographic*, and four books, one of which is a National Outdoor Book Award winner. Dr. Stone's numerous accolades and professional associations include the Explorers Club, Pew Fellowship for Marine Conservation, National Geographic Hero, the Boston Sea Rover's Diver of the year, Order of Kiribati Medal, the U.S. National Science Foundation/Navy Antarctic Service medal, and a NOGI Award from National Academy of Underwater Arts and Sciences. Dr. Stone is also a Senior Science Advisor to the Special Envoy for Ocean and the World Economic Forum Ocean Program. From September 2008 to February 2018, Dr. Stone served as Chief Scientist for Conservation International and head of the Global Ocean Program. Dr. Stone earned a Ph.D. in Marine Science from the University of the South Pacific, a M.Sc. in Marine Policy from the University of Rhode Island and a B.A. in Human Ecology and Marine Biology from the College of the Atlantic.

Christelle Gedeon, Ph.D., has served as the Chief Legal officer since October 2021. Christelle is an established public company CLO having previously held a similar position in a 5-billion-dollar market cap dual-listed (Nasdaq and TSX) entity, active in more than 10 countries. She enhances the TMC management team with her expertise in navigating complex regulatory regimes, corporate governance, government relations, as well as with her deep experience in intellectual property portfolio management. Prior to joining The Metals Company, Christelle was a partner at a prominent Canadian law firm and spent several years advising life sciences clients on corporate commercial as well regulatory matters including negotiations with government agencies, securing operating licenses and internal compliance monitoring and auditing. Dr Gedeon received her LL.B/B.C.L. from McGill University and holds a Ph.D. in Clinical Pharmacology and Toxicology from the University of Toronto.

Non-Employee Directors

Andrew Hall has served on our board of directors since the Closing in September 2021 and is currently the Lead Independent Director. Mr. Hall is an internationally experienced executive and non-executive in the renewable energy technologies and services sector. Since July 2018, Mr. Hall has served as Managing Director of Saxjo Limited, a renewable energy consultancy company. Previously, Mr. Hall was Group Chief Financial Officer at Siemens Gamesa Renewable Energy SA, one of the largest companies in the wind and renewables industry, from April 2017 to November 2017. From October 2015 to March 2017, Mr. Hall served as Group Chief Financial Officer and Executive Director at Siemens Wind Power GmbH & Co KG, a wind turbine original equipment manufacturer. Prior to that, Mr. Hall held a number of senior positions in other divisions of Siemens AG, including Chief Financial Officer and Board Member at Siemens Holdings plc & Cluster North West Europe in London from 2012 to 2015 and Chief Financial Officer and Board Member at Siemens Ltd & Cluster Africa in Johannesburg from 2008 to 2012. Mr. Hall currently serves on the board of a portfolio of venture capital, private equity and family office-backed companies in the renewable energy sector. Since September 2019, Mr. Hall has been Executive Chair of Star Windco Limited, a company providing wind turbine erection services. Since October 2018, Mr. Hall has been a non-executive director of Time to Act Limited, which specializes in metal coatings for the gas turbine and hydrogen industries. Additionally, Mr. Hall has served as Chair of New Motion Labs Limited, which licenses technology for the manufacture of mechanical drives, since June 2019, and as Senior Independent Director of Hero Future Energies Global Limited, a global renewable energy developer, since February 2019. Previously, Mr. Hall served as a board member of A2Sea AS from 2015 to 2017, Voith Hydro GmbH & Co KG from 2015 to 2017 and Mimica Labs from 2014 to 2017. Mr. Hall earned a M.Sc. & B.Sc. from the University of Cape Town and an M.B.A. from the London Business School. Mr. Hall's qualifications to serve on the board of directors include his extensive international experience leading large, capital-intensive businesses in the renewable energy sector.

Christian Madsbjerg has served on our board of directors since the Closing in September 2021. Christian currently serves as the Chair of the Nomination and Governance Committee. Since 2019, Mr. Madsbjerg has served on the board of directors of Fritz Hansen A/S Copenhagen. Since August 2018, Mr. Madsbjerg has served as Professor of Applied Humanities at The New School for Social Research. Since January 2009, Mr. Madsbjerg has served as a director and senior partner of the consulting firm, ReD Associates, which he co-founded in August 2007. Mr. Madsbjerg is also a writer whose work has been featured in publications such as *The Wall Street Journal*, *Financial Times*, *The Washington Post*, *Der Spiegel*, and *Bloomberg Businessweek*. His latest book, *Sensemaking: The Power of the Humanities in the Age of the Algorithm*, was published in the spring of 2017 by Hachette Book Group. His book *The Moment of Clarity*, co-written with ReD partner Mikkel B. Rasmussen, was published by Harvard Business Press in the fall of 2014. He studied philosophy and political science in Copenhagen and London and has a Masters from the University of London. Mr. Madsbjerg's qualifications to serve on the board of directors include his expertise in advising senior executives, including the practical application of the human sciences in business.

Sheila Khama has served on our board of directors since the Closing in September 2021. Ms. Khama is a consultant, policy advisor and former mining industry executive with expertise in corporate governance and sustainable development of minerals, oil and gas resources. Sheila currently serves as the Chair of the Sustainability and Innovation Committee. Since April 2019, Ms. Khama has been an independent consultant on oil and gas governance and policy reforms for SK Consulting Pty, Ltd. From November 2016 to March 2019, Ms. Khama served as Practice Manager and Coordinator of Donor Relations and Partnerships at The World Bank, where she led an international team of mineral, oil and gas specialists in implementing support programs ranging from policy reforms, technical assistance, research and knowledge dissemination for various countries. From November 2013 to November 2016, Ms. Khama served as Director African Natural Resources Center at the African Development Bank in Tunisia, where she led a support program for African governments to improve development outcomes from renewable and non-renewable resources. From 2010 to 2013, Ms. Khama served as Director of the Extractives Advisory Program at the African Center for Economic Transformation, a pan-African think tank based in Ghana. Ms. Khama also previously held a number of senior roles in the private sector, including Chief Executive Officer of De Beers Botswana from 2005 to 2010, Head of Marketing and Communication at the First National Bank of Botswana Ltd from 2002 to 2005, and Group Secretary of the Anglo-American Corporation Botswana from 1994 to 2002. Ms. Khama also currently serves as a Non-Executive Director for Tullow Oil plc, a position she has held since June 2019. Ms. Khama received an M.B.A. in General Management from Edinburgh University and a B.A. from the University of Botswana. Ms. Khama's qualifications to serve on the board of directors include her extensive experience as a corporate strategist and her deep understanding of regulatory frameworks in the minerals, oil and gas industry.

Andrei Karkar has served on our board of directors since the Closing in September 2021 and served as a director of DeepGreen since March 2019. Andrei currently serves as the Chair of the Compensation Committee. Since 2006, Mr. Karkar has served as Chief Executive Officer of ERAS Holdings, The Karkar Family Office, with its origins in Karkar Electronics founded in 1959 by Edward Karkar. ERAS Holdings engages in a broad range of investment activities and invests in a wide variety of asset classes. Since July 2019, Mr. Karkar has served as a member of the board of directors of CognitionX, a private company based in the United Kingdom, and is a board member of Shepherd OÜ based in Estonia. Mr. Karkar received a B.A. from Georgetown University. Mr. Karkar's qualifications to serve on the board of directors include his experience as an advisor and investor in public and private companies.

Amelia Kinahoi Siamomua has served on our board of directors since the Closing in September 2021. Ms. Siamomua has over 35 years of experience as a development economist and an international civil servant with a strong focus on gender equality and sustainability issues. Since March 2021, Ms. Siamomua has been an independent consultant on gender and social inclusion for Cardno International Development to provide technical assistance to the Government of Nauru and for UNDP to provide technical assistance for Tonga’s Coastal Resilience Project. From June 2015 until February 2021, Ms. Siamomua served as Head of Gender, in the Economic, Youth & Sustainable Development Directorate of the Commonwealth Secretariat based in London, United Kingdom, where she represented the Secretary General at the United Nations (“UN”) High-level Group on Women’s Access to Justice and the UN Commission on the Status of Women. Between 2012 and 2014, Ms. Siamomua held a position as Inter-Regional Advisor (Small Island Developing States) within the Division for Sustainable Development at the UN Department of Economic and Social Affairs in New York, where she analyzed best practices on sustainable development and provided policy advice to governments and relevant stakeholders in developing countries. Prior to that, Ms. Siamomua served as senior advisor in Papua New Guinea from 2010-2012 and as project coordinator in Fiji from 2008-2009 as part of the UN Development Programme and prior to this, she had served with the Asian Development Bank, Pacific Community and Pacific Forum. Ms. Siamomua has earned a B.A. in Economics and Politics and post graduate executive studies on business administration, leadership and development from the University of the South Pacific in Fiji and the Kennedy School of Government, Harvard University. Ms. Siamomua’s qualifications to serve on the board of directors include her sustainable development expertise and her extensive knowledge of economic and social policies of small island developing states, multilateralism and inter-governmental processes of the Asia-Pacific, the UN and the Commonwealth.

Gina Stryker has served on our board of directors since the Closing in September 2021. Ms. Stryker has 20 years of tax experience in corporate settings as well as 14 years of senior management experience. Since May 2020, Ms. Stryker has served as General Counsel and Corporate Secretary of SOAC. Since August 2019, Ms. Stryker has also been a part of 3920 Partners LLC, a company focused on sustainable investment, where she now serves as Partner. From July 2018 to January 2019, Ms. Stryker served as Senior Advisor to EVP Restructuring at GenOn Energy, Inc. (“GenOn”), where she led tax and business strategy engagement as GenOn prepared to emerge from Chapter 11. Prior to July 2018, Ms. Stryker managed a family office. Ms. Stryker has earned a B.S. in Applied Science from Youngstown State University, a J.D. from University of Pittsburgh, an LLM from New York University and an M.B.A. from Rice University. Ms. Stryker’s qualifications to serve on the board of directors include her prior experience advising on tax and business strategy in the energy industry.

Kathleen McAllister has served on the board of directors since February 9, 2022. Ms. McAllister currently serves as the Chair of the Audit Committee. Ms. McAllister is a Certified Public Accountant (CPA) and former President and CEO and CFO of Transocean Partners LLC. Ms. McAllister brings a broad range of strategic perspective to the complex challenges of operating cyclical businesses and raising capital and corporate governance in the global marketplace. She currently serves as an independent director for Black Hills Corporation and Hoegh LNG Partners LP. She serves on the Audit Committee of both companies and on the Hoegh LNG Partners Conflict Committee. Previously, Ms. McAllister served on the board of Maersk Drilling and chaired the Audit and Risk Committee. Ms. McAllister’s qualifications to serve on the board of directors includes her broad experience in global business operations, capital raising and allocation, business transformation, risk oversight, SEC reporting, mergers and acquisitions, internal controls, tax, treasury and talent development.

There are no family relationships, as such term is defined in Item 401(d) of Regulation S-K, between or among any of our directors or executive officers.

Role of Board in Risk Oversight

The board of directors have extensive involvement in the oversight of risk management related to the Company and its business and will accomplish this oversight through the regular reporting to the board of directors by the audit committee. The audit committee will represent the board of directors by periodically reviewing the Company’s accounting, reporting and financial practices, including the integrity of its financial statements, the surveillance of administrative and financial controls and its compliance with legal and regulatory requirements. Through its regular meetings with management, including the finance, legal, internal audit and information technology functions, the audit committee will review and discuss all significant areas of our business and summarize for the board of directors all areas of risk and the appropriate mitigating factors. In addition, the board of directors will receive periodic detailed operating performance reviews from management.

Composition of the Board of Directors

Our business and affairs are managed under the direction of our board of directors. Our board of directors is declassified, and the directors will be elected annually.

Independence of the Board of Directors

Nasdaq rules generally require that independent directors must comprise a majority of a listed company's board of directors. Based upon information requested from and provided by each director concerning his or her background, employment and affiliations, including family relationships, the board of directors has determined that Andrew Hall, Gina Stryker, Sheila Khama, Christian Madsbjerg, Amelia Kinahoi Siamomua, Andrei Karkar and Kathleen McAllister, representing seven (7) of the Company's eight (8) directors, are "independent" as that term is defined under the applicable rules and regulations of the SEC and the listing requirements and rules of the Nasdaq. Andrew Hall serves as the Lead Independent Director of the board of directors.

Board Committees

The standing committees of the board of directors consist of an audit committee, a compensation committee, a nominating and corporate governance committee and the sustainability and innovation committee. The board of directors may from time to time establish other committees.

Our chief executive officer and other executive officers will regularly report to the non-executive directors and the audit, the compensation and the nominating and corporate governance committees to ensure effective and efficient oversight of our activities and to assist in proper risk management and the ongoing evaluation of management controls. We believe that the leadership structure of the board of directors will provide appropriate risk oversight of our activities.

Audit Committee

Our audit committee consists of Kathleen McAllister, who serves as the chairperson, Andrew Hall and Gina Stryker. Each member of the audit committee qualifies as an independent director under the Nasdaq Listing Rules and the independence requirements of Rule 10A-3 under the Exchange Act.

The board of directors has determined that Ms. McAllister qualifies as an "audit committee financial expert", as such term is defined in Item 407(d)(5) of Regulation S-K and possesses financial sophistication, as defined under the rules of Nasdaq.

The purpose of the audit committee is to prepare the audit committee report required by the SEC to be included in our proxy statement and to assist the board of directors in overseeing and monitoring (1) the quality and integrity of the financial statements, (2) compliance with legal and regulatory requirements, (3) our independent registered public accounting firm's qualifications and independence, (4) the performance of our internal audit function and (5) the performance of our independent registered public accounting firm.

The board of directors has adopted a written charter for the audit committee, which is available on the Company's website at www.metals.co under Investors — Governance — Governance Documents.

Compensation Committee

Our compensation committee consists of Andrei Karkar, who serves as the chairperson, Sheila Khama and Gina Stryker.

The purpose of the compensation committee is to assist the board of directors in discharging its responsibilities relating to (1) setting our compensation program and compensation of its executive officers and directors, (2) monitoring our incentive and equity-based compensation plans and (3) preparing the compensation committee report required to be included in our proxy statement under the rules and regulations of the SEC.

The board of directors has adopted a written charter for the compensation committee, which is available on the Company's website at www.metals.co under Investors — Governance — Governance Documents.

Nominating and Corporate Governance Committee

Our nominating and corporate governance committee consists of Christian Madsbjerg, who serves as the chairperson, Sheila Khama and Andrei Karkar. The purpose of the nominating and corporate governance committee is to assist the board of directors in discharging its responsibilities relating to (1) identifying individuals qualified to become new board of directors members, consistent with the criteria approved by the board of directors, (2) reviewing the qualifications of incumbent directors to determine whether to recommend them for re-election and selecting, or recommending that the board of directors select, the director nominees for the next annual meeting of shareholders, (3) identifying members of the board of directors qualified to fill vacancies on any committee of the board of directors and recommending that the board of directors appoint the identified member or members to the applicable committee, (4) reviewing and recommending to the board of directors corporate governance principles applicable to the Company, (5) overseeing the evaluation of the board of directors and management and (6) handling such other matters that are specifically delegated to the committee by the board of directors from time to time.

The board of directors have adopted a written charter for the nominating and corporate governance committee, which is available on the Company's website at www.metals.co under Investors — Governance — Governance Documents.

Sustainability and Innovation Committee

Our sustainability and innovation committee consists of Sheila Khama, who serves as the chairperson, Christian Madsbjerg and Amelia Kinahoi Siamomua.

The purpose of the sustainability and innovation committee is to assist the board of directors in discharging its responsibilities relating to oversight of our policies, programs, performance and related risks and opportunities that concern key sustainability and innovation matters, including issues of significance to us and our stakeholders that may affect its business, strategy, operations, performance, or reputation.

The board of directors have adopted a written charter for the sustainability and innovation committee, which is available on the Company's website at www.metals.co under Investors — Governance — Governance Documents.

Code of Business Conduct and Ethics

We have adopted a code of business conduct and ethics that applies to all of our directors, officers and employees, including our principal executive officer, principal financial officer and principal accounting officer, which is available on our website at www.metals.co under Investors — Governance — Governance Documents. Our code of business conduct is a “code of ethics,” as defined in Item 406(b) of Regulation S-K.

We will make any legally required disclosures regarding amendments to, or waivers of, provisions of our code of ethics in a Current Report on Form 8-K within four business days following the date of the amendment or waiver, unless website posting or the issuance of a press release of such amendment or waiver is then permitted by Nasdaq rules.

Corporate Governance Guidelines

Our board of directors has adopted corporate governance guidelines in accordance with the corporate governance rules of Nasdaq that serve as a flexible framework within which our board of directors and its committees operate. These guidelines cover a number of areas including board membership criteria and director qualifications, director responsibilities, board agenda, meetings of non-management directors, committee responsibilities and assignments, board member access to management and independent advisors, director communications with third parties, director compensation, director orientation and continuing education, evaluation of our chief executive officer management succession planning. A copy of our corporate governance guidelines is posted on our website at www.metals.co under Investors — Governance — Governance Documents.

EXECUTIVE AND DIRECTOR COMPENSATION

Introduction

SOAC

None of SOAC's executive officers or directors received any cash compensation for services rendered to SOAC. SOAC agreed to pay an affiliate of the Sponsor a total of \$10,000 per month, for up to 18 months, for office space, secretarial and administrative services provided to members of its management team. The Sponsor, executive officers and directors, or any of their respective affiliates were reimbursed for any out-of-pocket expenses incurred in connection with activities on its behalf, such as identifying potential target businesses and performing due diligence on suitable business combinations.

DeepGreen and TMC

This section provides an overview of our executive compensation programs, including a narrative description of the material factors necessary to understand the information disclosed in the summary compensation table below. The number of securities and exercise prices, as applicable, described in this section have been adjusted based on the exchange ratio calculated pursuant to the terms of the Business Combination Agreement to reflect the number of securities and exercise prices following the Business Combination.

We are currently considered a "smaller reporting company" within the meaning of the Securities Exchange Act of 1934, as amended, for purposes of the SEC's executive compensation disclosure rules. Accordingly, we are required to provide a Summary Compensation Table and an Outstanding Equity Awards at Fiscal Year End Table, as well as limited disclosures regarding executive compensation for our last two completed fiscal years. Further, our reporting obligations extend only to the following "Named Executive Officers" or "NEOs," which are the individuals who served as principal executive officer and the next two most highly compensated executive officers for the fiscal year ended December 31, 2021. As of December 31, 2021, our NEOs were:

- Gerard Barron, Chief Executive Officer;
- Anthony O'Sullivan, Chief Development Officer; and
- Erika Ilves, Chief Strategy Officer

In 2021, our compensation program consisted of two components: (1) compensation for services related to DeepGreen prior to the Business Combination and (2) compensation for services related to us after the Business Combination.

Prior to September 9, 2021, DeepGreen's compensation program included base salaries, annual cash bonus, and stock option grants. The options granted on March 4, 2021 were awarded in lieu of cash bonuses to retain DeepGreen employees in furtherance of the Business Combination. The DeepGreen board had the sole discretion to award these options and exercised its discretion to do so, as it had not consistently awarded cash bonuses to its employees, despite multiple years of service. Some of the options were granted subject to the achievement of significant long-term performance goals of DeepGreen and remain unvested.

Our current executive compensation plan has been in place since September 9, 2021 and is the ongoing compensation program post-Business Combination. Our current executive compensation plan includes base salaries, Short-Term Incentive Program (paid in restricted share units for 2021), and a Long-Term Incentive Program (granted in the form of restricted share units grants for 2021).

In 2021, our executive compensation program was designed to provide our named executive officers with meaningful incentives and rewards, while effectively balancing the short-term and long-term interests of our shareholders with our ability to attract and retain talented executives. The compensation committee of our Board, post Business Combination (the "Compensation Committee"), has the primary responsibility for establishing our executive compensation philosophy and determining the specific components and levels of each named executive officers' compensation. Our executive compensation program is based on four guiding principles. We have created a compensation program that combines short-term and long-term components, cash, equity, fixed and performance-based contingent payments, in the proportions that we believe achieve these four guiding principles:

- enhance shareholder value by aligning the financial interests of our named executive officers with those of our shareholders;
- enable us to attract, motivate and retain the people needed to define and lead our industry;

- integrate compensation closely with the achievement of our business and performance objectives; and
- reward the individual performance that contributes to our short-term and long-term success.

The Compensation Committee utilized and relied significantly on a competitive market analysis when determining the size, components and mix of our named executive officers' compensation packages.

Our Named Executive Officers' target annual compensation consists of three principal components: (a) base salary, (b) an annual performance Short-Term Incentive Plan ("STIP") and (c) long-term equity incentive compensation under our Long-Term Incentive Plan ("LTIP"). The base salary component is primarily designed to provide a predictable level of financial stability. The STIP is designed to reward the achievement of annual goals that are aligned with our strategic plan. The base salary and STIP are referred to as the cash component of the compensation plan. The LTIP is the equity compensation component and is primarily designed to incentivize and retain our executives over a multi-year period and to reward the achievement of our long-term financial and strategic objectives.

Elements of Compensation

Our executive compensation program consists of three principal components: base salary, STIP (together with base salary, "total cash compensation"), and the LTIP. The LTIP consists primarily of restricted share units ("RSUs"), and prior to the Business Combination, stock options, that each vest over time based on continued employment and, in some cases, the achievement of performance and market goals.

Key Components of Our 2021 Compensation Plans

Compensation Element	Primary Purpose	Performance Period	Details
Cash Compensation			
Base Salary	Reward for ongoing work performed, executive tenure and role	Ongoing	Provided in cash each pay period.
Short Term Incentive Plan (STIP)	Reinforce and drive short-term priorities and business results	1 year	Target award based on a percentage of salary.
	Recognize and reward corporate and individual performance		Awards may be earned from 0% to 100% of target based on achievement of pre-determined corporate short-term objectives that are aligned with our strategic plan as well as individual performance. Awards are paid in cash upon the completion of the fiscal year; however, for 2021, STIP awards were paid in immediately-vested RSUs.
Equity Compensation			
Long-term incentives (LTIP)	Reinforce and drive long-term shareholder value Retain executives over a multi-year period Incentivize the achievement by management of multi-year performance goals	3 or 4 years	Grants post-Business Combination were in the form of RSUs that generally vest one-third per year over three years or in fourths over four years. Grants made by DeepGreen prior to the Business Combination related to service prior to the Business Combination were in the form of stock options that vest over time based on continued employment as well as upon the achievement of performance and market goals. Time-based options vest one third per year over 3 years beginning from an individual's start date, while performance-based options vest based on the achievement of four pre-established goals within a 7-year performance period.

Equity Compensation

We use long-term equity-based compensation to incentivize and retain our executive officers by linking their awards to the achievement of our long-term strategic goals. We typically award long-term equity-based compensation with restricted share units that vest over time so long as the executive remains employed with the Company.

The Compensation Committee determines the size of equity award grants after considering the following factors:

- the competitive equity compensation practices for comparable positions identified in the applicable market analysis;
- the executive's level of responsibility and duties;

- a comparison to grant levels of other executive officers;
- individual named executive officers' performance;
- our corporate performance;
- our total equity compensation costs relative to total expenses;

The Compensation Committee does not take into consideration an executive's aggregate equity holdings or equity carrying value in determining annual long-term equity incentive awards.

In 2021, the DeepGreen board prior to the Business Combination and our Compensation Committee approved the grant of equity awards to our Named Executive Officers. They considered, to the extent applicable, our corporate performance and individual contributions in 2021 as well as in prior years. The Compensation Committee determined the value of each equity award as time-based RSUs that vest one-third per year over three years based on the potential equity compensation expense and the target award size, as well as the retention and incentive aspects of the award. The total value was also informed by the competitive analysis conducted by FW Cook, an independent compensation consulting firm engaged by our Compensation Committee to provide competitive market data as well as advice on pay levels and compensation program structure.

The stock awards disclosed in the summary compensation table below represent the RSUs approved by our Compensation Committee, which were issued and valued on November 22, 2021, using a share price of \$3.20. Option awards disclosed in the summary compensation table below were granted by the DeepGreen board on March 4, 2021 and were valued on that date using a Black-Scholes valuation model, which ascribed a fair value between \$5.42 and \$5.59 per option.

Summary Compensation Table

The following table shows information concerning the annual compensation for services provided to us by our NEOs for the fiscal year ended December 31, 2021 and 2020.

Name and Principal Position	Year	Salary (\$)	Bonus (\$) ⁽¹⁾	Stock Awards (\$) ⁽²⁾	Option Awards (\$) ⁽³⁾	All Other Compensation (\$) ⁽⁴⁾	Total (\$)
Gerard Barron, <i>Chief Executive Officer</i>	2021	565,000	296,625	2,500,000	10,833,401	—	14,195,026
	2020	565,000	—	—	—	—	565,000
Anthony O'Sullivan, <i>Chief Development Officer</i>	2021	475,000	166,250	1,000,000	4,539,262	12,838	6,193,350
	2020	475,000	—	—	—	14,998	489,998
Erika Ilves, <i>Chief Strategy Officer</i>	2021	395,000	138,250	750,000	4,778,763	—	6,062,013
	2020	395,000	—	—	—	—	395,000

- (1) For the year ended December 31, 2021, the Company awarded an annual STIP bonus at 70% of target in the form of RSUs. The number of RSUs granted is 180,869 units for Gerard Barron, 101,372 units for Anthony O'Sullivan, and 84,299 units for Erika Ilves. The RSUs were granted on February 9, 2022 and were fully vested upon the grant date (at a fair value per RSU of \$1.64).
- (2) Stock awards consists of RSUs granted during the year ended December 31, 2021. The grant date fair value is computed based on the closing market price on the date of grant in accordance with FASB ASC Topic 718, *Compensation – Stock Compensation* ("ASC 718").
- (3) The amounts shown in this column represents the aggregate grant date fair value of the time-based stock option awards and performance-based stock option awards granted by DeepGreen prior to the Business Combination, computed in accordance with FASB ASC Topic 718. Under SEC rules, these performance-based option awards are valued based on the probable outcome of the performance conditions associated with these awards, which a portion was determined to be not probable at grant. As a result, the amount determined to be not probable at grant in respect to the performance-based stock options granted in 2021 has been excluded in the table above. The grant date fair value of these performance-based stock option awards, assuming the performance conditions are achieved in full, is \$15,954,495 for Gerard Barron, \$6,815,302 for Anthony O'Sullivan, and \$7,054,804 for Erika Ilves. Additional information can be found in note 16 to the audited consolidated financial statements included in our annual report on Form 10-K for the year ended December 31, 2021.
- (4) Consists of Australian superannuation contributions made by TMC/DeepGreen during the years 2021 and 2020.

Outstanding Equity Awards at 2021 Fiscal Year-End

The following table sets forth certain information regarding outstanding equity awards held by the NEOs as of December 31, 2021. The number of securities and exercise prices, as applicable, described in this section have been adjusted based on the exchange ratio calculated pursuant to the terms of the Business Combination Agreement to reflect the number of securities and exercise prices following the Business Combination.

Name	Grant Date	Option Awards				Stock Awards	
		Number of Securities Underlying Unexercised Options Exercisable (#)	Number of Securities Underlying Unexercised Options Unexercisable (#) ⁽¹⁾	Option Exercise Price (\$)	Option Expiration Date	Number of shares or units of stock that have not vested (#) ⁽²⁾	Market value of shares or units of stock that have not vested (\$) ⁽³⁾
Gerard Barron	05/16/2019	3,473,586	—	\$ 0.65	06/01/2028	—	—
	03/04/2021	604,458	2,275,334	0.65	06/01/2028	—	—
	11/22/2021	—	—	—	—	781,250	1,625,000
Anthony O’Sullivan	05/16/2019	466,965	—	\$ 0.65	06/01/2028	—	—
	03/04/2021	218,707	1,011,259	0.65	06/01/2028	—	—
	11/22/2021	—	—	—	—	312,500	650,000
Erika Ilves	09/01/2018	1,099,968	—	\$ 0.65	06/01/2028	—	—
	03/04/2021	262,109	1,011,259	0.65	06/01/2028	—	—
	11/22/2021	—	—	—	—	234,375	487,500

- (1) These stock options vest as follows, subject to continued service through each vesting threshold: (i) 25% if our market capitalization equals or exceeds \$3.0 billion; (ii) 35% if our market capitalization equals or exceeds \$6.0 billion; (iii) 20% if the International Seabed Authority grants us an exploitation contract; and (iv) 20% upon the commencement of the first commercial production following the grant of the exploitation contract.
- (2) Stock awards consists of RSUs that were granted on November 22, 2021 and vest one third on each anniversary of the grant date.
- (3) Market value of shares based on TMC’s closing market share price at December 31, 2021.

Other Compensation and Benefits

We believe that establishing a competitive benefit package consistent with companies with which we compete for employees is an important factor in attracting and retaining talented employees. Thus, we provide our Named Executive Officers with employee benefits on the same basis as offered to our full time non-executive employees, including health and dental benefits and a 401(k) plan (or equivalent as determined by employee’s jurisdiction of employment).

Employment Arrangements

DeepGreen entered into an employment agreement with Mr. Gerard Barron on January 1, 2018, an employment agreement with Mr. Anthony O’Sullivan on July 25, 2017, and an employment agreement with Ms. Erika Ilves on September 1, 2018, each in connection with their services as executive officers with DeepGreen, the material terms of which are described below. In addition, each NEO has agreed to non-competition, non-solicitation and non-interference covenants that apply during the term of employment and for 12 months thereafter, as well as assignment of intellectual property and confidentiality obligations, each as set forth in his or her respective employment agreement.

Mr. Barron began his current position as DeepGreen’s Chief Executive Officer in January 2018. Mr. O’Sullivan began his current position as DeepGreen’s Chief Development Officer in July 2017. Ms. Ilves began her current position as Head of Strategy and Business Development in September 2018 and continues as our Chief Strategy Officer.

Gerard Barron

DeepGreen entered into an employment agreement with Mr. Barron, who accepted and commenced his role as DeepGreen's Chief Executive Officer on the agreement effective date, January 1, 2018 (the "Barron Employment Agreement"). Under the Barron Employment Agreement, Mr. Barron's initial annual base salary was \$450,000, which DeepGreen agreed to review on a year-to-year basis, in accordance with DeepGreen's payroll practices. Mr. Barron's current annual base salary is \$565,000. In addition, DeepGreen issued Mr. Barron up to 187,500 common shares, upon the execution of the Barron Employment Agreement, to be paid in lieu of cash for services provided by Mr. Barron from July 2017 through November 2017. As DeepGreen's Chief Executive Officer, Mr. Barron is eligible to participate in DeepGreen's benefit plans and to be considered for an annual performance incentive bonus, to be granted at the discretion of the board of directors on a year-to-year basis (the "Employment Bonus"). Under the Barron Employment Agreement, if Mr. Barron is deemed eligible to receive an Employment Bonus for a particular year, then the terms of such Employment Bonus shall be provided under a separate agreement and paid as soon as practicable after the first quarter of the first financial year following the year that Mr. Barron earns such bonus.

Pursuant to the Barron Employment Agreement, Mr. Barron also received an option grant for 3,473,586 shares of DeepGreen common shares, at an exercise price of \$0.65 per share, subject to the terms and conditions set forth in a stock option agreement between the parties, dated July 23, 2018 (the "Barron Stock Option Agreement"). Under the Barron Stock Option Agreement, the parties agreed that (i) 2,894,655 options would be issued as part of DeepGreen's Long-Term Incentive Plan, with (x) 60% of such shares vesting in equal 20% installments on each of January 1, 2019, January 1, 2020 and January 1, 2021, and (y) 20% of such shares vesting upon the DeepGreen raising \$20,000,000 in cash following the date of grant and (z) 20% of such shares vesting upon DeepGreen raising a total of \$40,000,000 in cash following the date of grant, provided that Mr. Barron remained an employee of DeepGreen on such dates, and (ii) 578,931 options would be issued as part of Mr. Barron's board of directors remuneration, with 50% of such shares vesting as of the grant date and 50% of such shares vesting as of January 1, 2019. Any vested options under the Barron Stock Option Agreement are set to expire on June 1, 2028. All stock options granted to Mr. Barron are governed by the terms of the DeepGreen Plan (as defined below), as well as the Barron Stock Option Agreement. In the event that Mr. Barron's employment with DeepGreen is terminated without cause, Mr. Barron will receive a payment equal to either (i) 3 months of his then annual base salary, or (ii) in the event that DeepGreen had raised (y) \$20,000,000 in equity as of January 1, 2018 and (z) DeepGreen has greater than \$10,000,000 cash-on-hand as of the date of such termination, then Mr. Barron shall receive an amount equal to 12 months of his base salary as a salary continuance in accordance with the Barron Employment Agreement and DeepGreen's standard monthly payroll practices (the "Barron Severance Benefits"). In the event that, following a change of control of DeepGreen, Mr. Barron is terminated without "cause" or resigns as a result of a "triggering event," Mr. Barron will also be eligible to receive the Barron Severance Benefits.

Anthony O'Sullivan

DeepGreen entered into an employment agreement with Mr. O'Sullivan, who accepted and commenced his role as DeepGreen's Chief Development Officer on July 25, 2017 (the "O'Sullivan Employment Agreement"). Pursuant to the terms of the O'Sullivan Employment Agreement, Mr. O'Sullivan's initial annual base salary was equal to AUD\$400,000, less applicable deductions (including Australian Pay As You Go withholding tax or such other withholding tax applicable to the jurisdiction in which Mr. O'Sullivan resides at the time). Mr. O'Sullivan current annual base salary is US\$475,000. DeepGreen agreed to review the initial annual base salary on a year-to-year basis in accordance with the terms of the agreement. Mr. O'Sullivan is eligible to participate in DeepGreen's employee benefit plans, short-term incentive plan and the long-term incentive plan. In connection with his hiring, Mr. O'Sullivan was granted certain stock options pursuant to the DeepGreen Plan. Subject to the terms and conditions set forth by that certain stock option agreement, made effective July 23, 2018, by and between DeepGreen and Mr. O'Sullivan (the "Sullivan Stock Option Agreement"), Mr. O'Sullivan was granted 2,026,258 common shares at an exercise price of \$0.65 per share, subject to (i) thirty-four percent (34%) of the shares vesting as of the grant date, (ii) thirty-three percent (33%) of the shares vesting on June 1, 2019, and (iii) thirty-three percent (33%) of the shares vesting on June 1, 2020, provided that Mr. O'Sullivan remains an employee of DeepGreen on such dates. The vested options are set to expire on June 1, 2028, under the vesting and expiration conditions of the Sullivan Stock Option Agreement. In the event that Mr. O'Sullivan's employment with DeepGreen is terminated, then any unvested options will expire on the Termination Date. If Mr. O'Sullivan's employment with DeepGreen is terminated without "cause" or, within six months following a change of control of DeepGreen, Mr. O'Sullivan experiences a "triggering event," Mr. O'Sullivan will receive any earned, but unpaid, annual bonus.

Erika Ilves

DeepGreen entered into an employment agreement with Ms. Ilves, who accepted and commenced her role as DeepGreen's Head of Strategy and Business Development on September 1, 2018 (the "Ilves Employment Agreement"). Pursuant to the terms of the Ilves Employment Agreement, Ms. Ilves' initial annual base salary was \$180,000, which increased to \$300,000 per annum, effective January 1, 2019. Ms. Ilves' current annual base salary is \$395,000. As a DeepGreen employee, Ms. Ilves is eligible to participate in DeepGreen's employee benefit plans, short term incentive plan and long-term incentive plan. In connection with her hiring, Ms. Ilves was granted certain stock options under the DeepGreen Plan, subject to the terms and conditions set forth by her stock option agreement with DeepGreen, dated September 1, 2018 (the "Ilves Stock Option Agreement"). Under the Ilves Stock Option Agreement, Ms. Ilves was granted 1,099,968 common shares, at an exercise price of \$0.65 per share, subject to (i) thirty-four percent (34%) of the shares vesting as of the grant date, (ii) thirty-three percent (33%) of the shares vesting on September 1, 2019, and (iii) thirty-three percent (33%) of the shares vesting on September 1, 2020. The vested options are set to expire on June 1, 2028 under the vesting and expiration conditions of the Ilves Stock Option Agreement. If Ms. Ilves' employment with DeepGreen is terminated without "cause" or, within six months following a change of control of DeepGreen, Ms. Ilves experiences a "triggering event," Ms. Ilves will receive any earned, but unpaid, annual bonus.

A "triggering event" is generally defined under the employment agreements as a material adverse change to any of the employee's duties, powers or title as they existed immediately prior to a change of control, a material adverse change in the office or body to whom the employee reports immediately prior to a change in control, the employee being required to work more than 50 km from the employee's primary place of work, or a material adverse change in the employee's remuneration.

Employee Benefits

Our NEOs participate in employee benefit programs available to its employees generally. DeepGreen did not maintain any executive-specific benefit or perquisite programs in 2021.

Stock Option Plans and Stock Option Awards

DeepGreen Plan

As a consequence of the Business Combination, we adopted and assumed the DeepGreen Metals Inc. Stock Option Plan, as amended (the "DeepGreen Plan"), and each option to purchase DeepGreen Common Shares, whether vested or unvested, that was outstanding immediately prior to the time the arrangement pursuant to the court-approved plan of arrangement became effective (the "Effective Time") was assumed by us and became an option (vested or unvested, as applicable) to purchase a number of our Common Shares equal to the number of DeepGreen Common Shares subject to such option immediately prior to the Effective Time multiplied by the Per Share Consideration, rounded down to the nearest whole number of shares, at an exercise price per share equal to the exercise price per share of such option immediately prior to the Effective Time divided by the Per Share Consideration, rounded up to the nearest whole cent. No further awards will be granted out of the DeepGreen Plan.

The DeepGreen Board adopted, and DeepGreen's shareholders approved, the DeepGreen Plan on September 17, 2013. The DeepGreen Plan has been periodically amended, most notably: on July 23, 2018 in order to increase the number of shares of DeepGreen common shares available for issuance pursuant to the DeepGreen Plan to a maximum of 20% of the issued and outstanding common shares, and on May 16, 2019 in order to clarify the application with respect to certain provisions of employee scheme legislation in Australia. The DeepGreen Plan permits the grant of options of DeepGreen's common shares, as defined by the DeepGreen Plan (the "Options"). Options may be granted only to (i) a *bona fide* director, senior officer, employee of DeepGreen, (ii) a company that is wholly-owned by any of the foregoing, or (iii) a consultant of DeepGreen. The board of directors, in its sole discretion, may accelerate the vesting of any unexercised options in accordance with the change of control provisions set forth in the DeepGreen Plan.

The board of directors is authorized to administer the DeepGreen Plan. In addition, consistent with the terms of the DeepGreen Plan, the board of directors may determine the number of shares issuable for the exercise of each Option, the Option Price, as defined by the DeepGreen Plan, and the times when any such Options will be granted, exercisable and expire under the DeepGreen Plan. No further awards will be granted pursuant to the DeepGreen Plan.

Upon any time when an Option granted under the DeepGreen Plan remains unexercised with respect to any common shares and a transaction is proposed that the majority of the board of directors determines is reasonably likely to be considered a Change of Control Event, as defined by the DeepGreen Plan (a “Change of Control Event”), then the board of directors, in its sole discretion, may require that: (i) DeepGreen accelerate the vesting of the Option and the time for the fulfilment of any conditions or restrictions on such vesting; (ii) the Option granted under the DeepGreen Plan be exercised (whether or not such Option has vested at any time up to and including (but not after) the effective time of the Change of Control Event), and any Options not exercised by the effective time of the Change of Control Event will be deemed to have expired; (iii) the Option granted under the DeepGreen Plan, if acceptable by the holder, be cancelled by DeepGreen for a cash payment equal to the difference between (y) the closing price of such shares on a trading day that is a determined number of days prior to the effective time of the Change of Control Event and (z) the price of the Option; or (iv) the Option granted under the DeepGreen Plan be exchanged for an Option to acquire the number of securities as are distributed to the securityholders of DeepGreen equal to (y) the exchange ratio of the shares multiplied by (z) the number of shares subject to such Option immediately prior to the effective time of the Change of Control Event, provided that any such replacement Option survives for a period of not less than one year from the effective time of the Change of Control Event, regardless of the continuing directorship, officership or employment of the holder.

The board of directors may amend, suspend, or terminate the DeepGreen Plan at any time. The board of directors Board must obtain shareholder approval of any plan amendment to the extent required by the DeepGreen Plan.

TMC Incentive Equity Plan

Eligibility

The TMC the metals company Inc. 2021 Incentive Equity Plan (the “TMC Incentive Equity Plan”) allows for grants, under the direction of the board of directors or compensation committee, as the plan administrator, of stock options, stock appreciation rights, restricted stock awards, stock awards, restricted share units and other stock or equity-related cash-based awards to employees, consultants and non-employee directors who, in the opinion of the plan administrator, are in a position to make a significant contribution to our long-term success. All of our employees, non-employee directors and consultants and our affiliates will be eligible to participate in the TMC Incentive Equity Plan.

Shares Available for Issuance

The TMC Incentive Equity Plan provides for the future issuance of 24,682,385 Common Shares, provided that 1/11 of the Common Shares available under the Plan will only be available to our non-employee directors. Notwithstanding the foregoing, the number of future shares that may be issued will increase automatically on the first day of each fiscal year during the period beginning with fiscal year 2022 and ending on the tenth anniversary of the Closing, equal to the lesser of (a) 4% of the number of outstanding Common Shares on such date, and (b) an amount determined by the plan administrator.

Generally, Common Shares reserved for awards under the TMC Incentive Equity Plan that lapse or are forfeited or cancelled will be added back to the share reserve available for future awards. However, shares delivered to or withheld to pay withholding taxes or any applicable exercise price will not be available for issuance under the TMC Incentive Equity Plan. In addition, any shares repurchased on the open market using exercise price proceeds will not be available for issuance under the TMC Incentive Equity Plan.

The aggregate grant date fair value of shares granted to any non-employee director under the TMC Incentive Equity Plan and any other cash compensation paid to any non-employee director in any calendar year may not exceed \$500,000; increased to \$750,000 in the year in which such non-employee director initially joins the board of directors.

Stock Options

The terms and conditions of our ability to grant stock options are governed by the TMC Incentive Equity Plan. Notably, we have established a sub-plan to the TMC Incentive Equity Plan (the “U.S. Sub-Plan”) for the purpose of granting stock options to employees who are residents of the United States or who are or may become subject to U.S. tax. Stock options granted under the U.S. Sub-Plan may either be incentive stock options, which are intended to satisfy the requirements of Section 422 of the Code, or non-qualified stock options. Incentive stock options may be granted to employees of TMC and its affiliates, and the aggregate fair market value of a Common Share determined at the time of grant with respect to incentive stock options that are exercisable for the first time by a participant during any calendar year may not exceed \$100,000. Non-qualified options may be granted to our employees, non-employee directors and consultants and our affiliates. If an incentive stock option is granted to an individual who owns 10% or less of the combined voting power of all classes of our stock or our affiliate, the exercise price of the stock option may not be less than 100% of the fair market value of the Common Shares on the date of grant, and the term of the stock option may not be longer than ten years. If an incentive stock option is granted to an individual who owns more than 10% of the combined voting power of all classes of our stock or our affiliate, the exercise price of the stock option may not be less than 110% of the fair market value of the Common Shares on the date of grant, and the term of the stock option may not be longer than five years.

Award agreements for stock options include rules for exercise of the stock options after termination of service. Options may not be exercised unless they are vested, and no option may be exercised after the end of the term set forth in the award agreement. Generally, stock options will be exercisable for three months after termination of service for any reason other than death or total and permanent disability, and for one (1) year after termination of service on account of death or total and permanent disability but will not be exercisable if the termination of service was due to cause.

Restricted Stock

Restricted stock that is subject to restrictions, including a prohibition against transfer and a substantial risk of forfeiture, until the end of a “restricted period” during which the grantee must satisfy certain time or performance-based vesting conditions. If the grantee does not satisfy the vesting conditions by the end of the restricted period, the restricted stock is forfeited. During the restricted period, the holder of restricted stock has the rights and privileges of a regular shareholder, except that generally dividend equivalents may accrue but will not be paid during the restricted period, and the restrictions set forth in the applicable award agreement apply. For example, the holder of restricted stock may vote the restricted shares, but he or she may not sell the shares until the restrictions are lifted.

Restricted Share Units

Restricted share units vest in accordance with terms and conditions established by the plan administrator and when the applicable restrictions lapse, the grantee will be entitled to receive a payout in cash, shares or a combination thereof based on the number of restricted share units as specified in the award agreement. Dividend equivalents may accrue but will not be paid prior to and only to the extent that, the restricted stock unit award vests. The holder of restricted share units does not have the rights and privileges of a regular shareholder, including the ability to vote the restricted share units.

Other Share-Based Awards and Performance-Based Awards

The TMC Incentive Equity Plan also authorizes the grant of other types of share-based compensation including, but not limited to share appreciation rights and unrestricted share awards. The plan administrator may award such share-based awards subject to such conditions and restrictions as it may determine. We may grant an award conditioned on satisfaction of certain performance criteria. Such performance-based awards also include performance-based restricted shares and restricted share units. Any dividends or dividend equivalents payable or credited to a participant with respect to any unvested performance-based award will be subject to the same performance goals as the shares or units underlying the performance-based award.

Plan Administration

In accordance with the terms of the TMC Incentive Equity Plan, the board of directors may administer the TMC Incentive Equity Plan or authorize the compensation committee to administer the TMC Incentive Equity Plan. The compensation committee may delegate part of its authority and powers under the TMC Incentive Equity Plan to one or more of our directors and/or officers, but only the compensation committee can make awards to participants who are subject to the reporting and other requirements of Section 16 of the Exchange Act. In accordance with the provisions of the TMC Incentive Equity Plan, the plan administrator determines the terms of awards, including, which employees, directors and consultants will be granted awards, the number of shares subject to each award, the vesting provisions of each award, the termination or cancellation provisions applicable to awards, and all other terms and conditions upon which each award may be granted in accordance with the TMC Incentive Equity Plan.

In addition, the plan administrator may, in its discretion, amend any term or condition of an outstanding award provided (i) such term or condition as amended is not prohibited by the TMC Incentive Equity Plan and does not require shareholder approval under the rules of Nasdaq, and (ii) any such amendment will be made only with the consent of the participant to whom such award was made, if the amendment is adverse to the participant unless such amendment is required by applicable law or necessary to preserve the economic value of such award.

Stock Dividends and Stock Splits

If the Common Shares are subdivided or combined into a greater or smaller number of shares or if we issue any common shares as a stock dividend, the number of common shares deliverable upon exercise of an option issued or upon issuance of an award will be appropriately increased or decreased proportionately, and appropriate adjustments will be made in the exercise price per share of stock options or purchase price, if any, and performance goals applicable to performance-based awards, if any, to reflect such subdivision, combination or stock dividend.

Corporate Transactions

Upon a merger or other reorganization event, the plan administrator or the board of directors of any entity assuming our obligations may take any one or more of the following actions pursuant to the TMC Incentive Equity Plan, as to some or all outstanding options and awards:

- provide that all outstanding options will be assumed or substituted by the successor corporation;
- upon written notice to a participant, provide that the participant's unexercised options must be exercised within a specified number of days of the date of such notice, at the end of which period such unexercised options will terminate;
- in the event of a merger pursuant to which holders of Common Shares will receive a cash payment for each share surrendered in the merger, make or provide for a cash payment to option holder participants equal to the difference between the merger price times the number of Common Shares subject to such outstanding options, and the aggregate exercise price of all such outstanding options, in exchange for the termination of such options;
- with respect to other stock awards, provide that outstanding awards will be assumed or substituted by the successor corporation;
- with respect to stock awards, and in lieu of any of the foregoing, provide that, upon consummation of the transaction, each outstanding stock award will be terminated in exchange for payment of an amount equal to the consideration payable upon consummation of such transaction to a holder of the number of Common Shares comprising such award (to the extent such stock grant or award is no longer subject to any forfeiture or repurchase rights then in effect or, at the discretion of the board of directors or an authorized committee, all forfeiture and repurchase rights being waived upon such transaction); and
- upon consummation of a Corporate Transaction, to the extent not assumed or substituted by the successor or cashed out, the outstanding awards will terminate.

Amendment and Termination

The TMC Incentive Equity Plan may be amended by our shareholders. It may also be amended by the board of directors or the compensation committee, provided that any amendment which is of a scope that requires shareholder approval as required by (i) the rules of Nasdaq or (ii) for any other reason, is subject to obtaining such shareholder approval. However, no such action may adversely affect any rights under any outstanding award without the holder's consent unless such amendment is required by applicable law or necessary to preserve the economic value of such award.

Duration of Plan

The TMC Incentive Equity Plan will expire by its terms in April 2031.

Director Compensation

On September 9, 2021, we adopted a non-employee director compensation policy. Pursuant to the policy, the annual cash retainer for non-employee directors is \$90,000. Annual cash retainers for committee membership are as follows:

Position	Retainer
Lead director	\$ 30,000
Audit Committee chairperson	\$ 22,500
Audit Committee member	\$ 7,500
Compensation Committee chairperson	\$ 15,000
Compensation Committee member	\$ 5,000
Nominating and Corporate Governance Committee chairperson	\$ 15,000
Nominating and Corporate Governance Committee member	\$ 5,000
Sustainability and Innovation Committee chairperson	\$ 15,000
Sustainability and Innovation Committee member	\$ 5,000

These fees are payable in arrears in quarterly installments as soon as practicable following the last business day of each fiscal quarter, provided that the amount of such payment will be prorated for any portion of such quarter that a director is not serving on the board of directors, on such committee or in such position. Non-employee directors are also reimbursed for reasonable out-of-pocket business expenses incurred in connection with attending meetings of the board of directors and any committee of the board of directors on which they serve and in connection with other business related to the board of directors. Directors may also be reimbursed for reasonable out-of-pocket business expenses in accordance with our travel and other expense policies, as may be in effect from time to time.

In addition, we grant to new non-employee directors upon their initial election to the board of directors a number of restricted share units ("RSUs") (each RSU relating to one share of Common Shares), having an aggregate fair market value equal to \$100,000, determined by dividing (A) \$100,000 by (B) the closing price of the Common Shares on Nasdaq on the date of the grant (rounded down to the nearest whole share), on the first business day after the date that the non-employee director is first appointed or elected to the board of directors. Each of these grants shall vest in equal annual installments over three years from the date of the grant, subject to the non-employee director's continued service as a director on the applicable vesting dates.

The table below summarizes the compensation of each person serving as a non-employee director of TMC and DeepGreen for the fiscal year ended December 31, 2021. Gerard Barron, our Chief Executive Officer, did not receive any additional compensation for his service as a director of DeepGreen in 2021. The compensation of Mr. Barron as a NEO is set forth above under “- Summary Compensation Table.”

Name	Fees Earned or Paid in				Total (\$)
	Cash (\$)	Stock Awards (\$)(1)	Option Awards (\$)	All Other Compensation (\$)	
Andrew Hall	\$ 39,560	\$ 99,998	\$ —	\$ —	\$ 139,558
Sheila Khama	\$ 35,682	\$ 99,998	\$ —	\$ —	\$ 135,680
Andrei Karkar	\$ 34,130	\$ 99,998	\$ 1,055,485 (2)	\$ —	\$ 1,189,614
Gina Stryker	\$ 31,803	\$ 99,998	\$ —	\$ —	\$ 131,801
Scott Leonard	\$ 34,906	\$ 99,998	\$ —	\$ —	\$ 134,904
Amelia Kinahoi-Saimomua	\$ 29,476	\$ 99,998	\$ —	\$ —	\$ 129,474
Christian Madsbjerg	\$ 34,130	\$ 99,998	\$ —	\$ —	\$ 134,129
Jonas Munch Agerskov	\$ 41,671	\$ —	\$ —	\$ —	\$ 41,671
Paul Matysek	\$ 22,947	\$ —	\$ 1,129,224 (3)	\$ —	\$ 1,152,171
Brian Paes-Braga	\$ 45,144	\$ —	\$ 1,371,246 (4)	\$ —	\$ 1,416,389

- (1) Consists of 8,032 RSUs granted during the year ended December 31, 2021. The grant date fair value is computed based on the closing market price on the date of grant in accordance with ASC 718.
- (2) Consists of 63,682 STIP options and 126,407 LTIP options granted under the DeepGreen Plan during the year ended December 31, 2021. Refer to note 16 in the Company’s audited consolidated financial statement for details on the grant date fair value of the option awards, computed in accordance with ASC 718.
- (3) Consists of 5,789 STIP options and 101,126 LTIP options granted under the DeepGreen Plan during the year ended December 31, 2021. Refer to note 16 in the Company’s audited consolidated financial statement for details on the grant date fair value of the option awards, computed in accordance with ASC 718.
- (4) Consists of 126,407 LTIP options granted under the DeepGreen Plan during the year ended December 31, 2021. Refer to note 16 in the Company’s audited consolidated financial statement for details on the grant date fair value of the option awards, computed in accordance with ASC 718.

The following lists all outstanding equity awards held by non-employee directors as of December 31, 2021:

Name	Aggregate Number of Shares Underlying Outstanding Options (1)	Number of Shares or Units of Stock That Have Not Vested (2)
Andrew Hall	—	8,032
Sheila Khama	—	8,032
Andrei Karkar	769,020	8,032
Gina Stryker	—	8,032
Scott Leonard	—	8,032
Amelia Kinahoi-Saimomua	—	8,032
Christian Madsbjerg	716,916	8,032
Jonas Munch Agerskov	—	—
Paul Matysek	685,846	—
Brian Paes-Braga	126,407	—

- (1) Consists of STIP options granted under the DeepGreen Plan which are fully vested, and have an exercise price ranging from \$0.52 to \$2.60 and expiration date between February 17, 2026 to June 30, 2028 and LTIP options granted under the DeepGreen Plan which vest as follows, subject to continued service through each vesting threshold: (i) 25% if our market capitalization equals or exceeds \$3.0 billion; (ii) 35% if our market capitalization equals or exceeds \$6.0 billion; (iii) 20% if the International Seabed Authority grants us an exploitation contract; and (iv) 20% upon the commencement of the first commercial production following the grant of the exploitation contract. LTIP options have an exercise period of \$0.65 and expiration date of June 1, 2028.
- (2) Consists of RSUs which vests in thirds on each anniversary of the grant date.

CERTAIN RELATIONSHIPS AND RELATED PARTY TRANSACTIONS

Certain Relationships and Related Person Transactions — SOAC

Founder Shares

On December 31, 2019, the Sponsor purchased 8,625,000 shares (the “Founder Shares”) of SOAC’s Class B ordinary shares, par value \$0.0001 for an aggregate price of \$25,000. In March 2020, the Sponsor transferred 30,000 Founder Shares to each of SOAC’s independent directors. Upon the Continuance, the Founder Shares became our common shares prior to the Business Combination. The Sponsor had agreed to forfeit up to 1,125,000 Founder Shares to the extent that the over-allotment option was not exercised in full by the underwriter so that the Founder Shares will represent 20% of SOAC’s issued and outstanding shares after the initial public offering. The over-allotment option expired in June 2020; thus, these Founder Shares were forfeited accordingly.

The initial shareholders agreed, subject to limited exceptions, not to transfer, assign or sell any of their Founder Shares until the earlier to occur of: (A) one year after the completion of the initial business combination; or (B) subsequent to the initial business combination, (x) if the last sale price of the Class A ordinary shares equals or exceeds \$12.00 per share (as adjusted for share subdivisions, share capitalizations, reorganizations, recapitalizations and the like) for any 20 trading days within any 30-trading day period commencing at least 150 days after the initial business combination, or (y) the date on which SOAC completes a liquidation, merger, share exchange or other similar transaction that results in all of SOAC’s shareholders having the right to exchange their Class A ordinary shares for cash, securities or other property.

Private Placement Warrants

Simultaneously with the closing of the initial public offering, SOAC consummated the private placement of 9,500,000 private placement warrants at a price of \$1.00 per private placement warrant to the Sponsor, generating gross proceeds of \$9.5 million with each private placement warrant exercisable for one whole Class A ordinary share at a price of \$11.50 per share.

A portion of the proceeds from the sale of the private placement warrants was added to the proceeds from the initial public offering held in the Trust Account. The private placement warrants are non-redeemable and exercisable on a cashless basis so long as they are held by permitted transferees.

The Sponsor and SOAC’s officers and directors agreed, subject to limited exceptions, not to transfer, assign or sell any of their private placement warrants until October 9, 2021.

Related Party Loans

On December 31, 2019, the Sponsor agreed to loan SOAC an aggregate of up to \$300,000 to cover expenses related to SOAC’s initial public offering pursuant to a promissory note (the “Note”). This loan was non-interest bearing and payable on the earlier of December 31, 2020 or the completion of the initial public offering. The Sponsor paid an aggregate of approximately \$163,000 to cover expenses on SOAC’s behalf under the Note. On May 8, 2020, SOAC repaid the Note in full.

Administrative Support Agreement

SOAC entered into an agreement, commencing on May 8, 2020, through the earlier of the SOAC’s consummation of a Business Combination and its liquidation, to reimburse the Sponsor a total of \$10,000 per month for office space, secretarial and administrative services. SOAC incurred and paid \$80,000 in expenses in connection with such services and recorded in general and administrative expenses in the statements of operations for each of the years ended December 31, 2021 and 2020.

PIPE Financing

In the PIPE Financing consummated on September 9, 2021, Allseas Group SA and Argentum Cedit Virtuti, an affiliate of Allseas, purchased \$20 million and \$10 million of our Common Shares, respectively.

Certain Relationships and Related Person Transactions — Legacy DeepGreen

2019 Private Placement

In 2019, DeepGreen sold 11,793,764 DeepGreen Common Shares at a price per share ranging from \$1.51 to \$2.59 in a private placement transaction for total gross proceeds of \$26,158,504. In connection therewith, ERAS Capital, an entity controlled by Andrei Karkar and an owner of more than 5% of our Common Shares, purchased 3,308,177 shares in the offering for an aggregate purchase price of \$5,000,000.

2020 Private Placement

In 2020, DeepGreen sold 6,553,409 DeepGreen Common Shares at a price per share of \$3.11 in a private placement transaction for total gross proceeds of \$20,375,712. In connection therewith, (i) Gerard Barron, our Chief Executive Officer and Chairman of our board of directors and an owner of more than 5% of our Common Shares, purchased 241,800 DeepGreen Shares in the offering for an aggregate purchase price of \$749,999 on August 7, 2020, and (ii) ERAS Capital, an entity controlled by Andrei Karkar and an owner of more than 5% of our Common Shares, purchased 2,412,212 DeepGreen Shares in the offering for an aggregate purchase price of \$7,499,999 on July 13, 2020.

Consulting Agreements

DGE is party to a consulting agreement with SSCS Pte. Ltd. (“SSCS”), an entity that is wholly-owned by John Machin, our Head of Offshore Engineering, to manage offshore engineering studies. Mr. Machin is also a director of DGE. Consulting services during the year ended December 31, 2021 amounted to \$275,000, and consulting services for the year ended December 31, 2020 amounted to \$275,000. As of December 31, 2021, the amount payable to SSCS amounted to \$23,000.

Gregory Stone, our Chief Ocean Scientist, regularly provides consulting services to us through Ocean Renaissance LLC (“Ocean Renaissance”), where he is a principal. Consulting services during the year ended December 31, 2021 amounted to \$375,000, and consulting services during the year ended December 31, 2020 amounted to \$366,667. As of December 31, 2021, the additional amounts payable to Ocean Renaissance amounted to \$nil.

Allseas

On March 29, 2019, the Company and Allseas entered into a Strategic Alliance Agreement (“SAA”), which provides the foundation for DeepGreen and Allseas to conduct project development of an integrated offshore nodule collection system for the Company’s subsidiaries. As initially constituted, Allseas agreed to subscribe for (i) 7.7 million DeepGreen Common Shares for a purchase price of \$20,000,000 in cash (the “Subscription”), the entire amount of which was funded, and (ii) an additional 11.6 million common shares in exchange for services rendered by Allseas in respect of the contemplated pilot mining test system (the “PMTS”), which would be designed and built by Allseas. The 11.6 million shares would only be issued upon completion of the PMTS (the “Success Fee Shares”), along with an additional \$30 million cash success fee that would be payable simultaneously therewith. The SAA also contemplated that the Company and Allseas would enter into other commercial arrangements following the successful completion of the PMTS.

On July 8, 2019, the Company and Allseas entered into the Pilot Mining Test Agreement (the “PMTA”), which governed the terms, design specifications, procedures, and timetable under which Allseas agreed to complete the PMTS, and which agreement is intended to be used by NORI. The PMTA was subsequently amended on September 1, 2019, February 20, 2020, and March 4, 2021. The SAA was also amended on March 4, 2021 (collectively with the PMTA amendment of the same date, the “Amendment”), which Amendment became effective upon the Closing Under the PMTA, in exchange for Allseas’ development efforts, upon successful delivery of the pilot trial of the PMTS in NORI Area D by Allseas, we agreed to pay Allseas: (a) \$30.0 million in cash and (b) issue 11.6 million common shares.

On February 20, 2020, the PMTA was amended to recognize the acquisition by Allseas of the *Hidden Gem*, a former drillship to be converted into a surface production vessel that would first be used as part of the PMTS, and later as part of the commercial production system. We paid an additional: (a) \$10.0 million in cash and (b) \$10.0 million by issuing 3.2 million common shares valued at \$3.11 per share.

[Table of Contents](#)

On March 4, 2021 and June 30, 2021, the Company and Allseas further amended the PMTA whereby, instead of issuing 11.6 million common shares upon successful delivery of the pilot trial of the PMTS in NORI Area D, we issued the Allseas Warrant (Note 14).

The amendment on March 4, 2021 stipulated that if the market price of the Company's common shares on June 1, 2022 is higher than \$12.95 per common share, the aggregate value of the common shares underlying the Allseas Warrant above \$150 million as at June 1, 2022 will automatically become a commercial credit from Allseas to the Company equal to the excess value. This commercial credit will be effective on the vesting date of the Allseas Warrant and the Company will be able to exchange this excess value for any future goods and services from Allseas under the nodule collection and shipping contract for one year after commercial production. There can be no assurance that such future goods and services from Allseas will occur.

The 2021 contract amendments also restructured the original \$30.0 million lump sum cash payment upon successful delivery of the PMTS to:

- \$10 million within 10 business days of the Closing and Allseas providing confirmation of placing an order for certain equipment and demonstrating certain progress on construction of the PMTS;
- \$10 million on the later of (i) January 1, 2022, and (ii) confirmation of successful completion of the North Sea drive test; and
- \$10 million upon successful completion of the pilot trial of the PMTS in NORI Area D.

On October 5, 2021, the first \$10 million payment was paid to Allseas for successfully reaching the first progress milestone, with the completion of the Business Combination and by confirming the order of certain equipment and demonstrating certain progress on construction of the PMTS. On March 25, 2021, the North Sea drive test was completed and we expect to pay to Allseas the second \$10 million payment in April 2022.

On March 16, 2022, NORI and Allseas entered into a non-binding term sheet for the development and operation of a commercial nodule collection system. The PMTS developed and currently being tested by Allseas is expected to be upgraded to a commercial system with a targeted production capacity of 1.3 Mtpa of wet nodules and expected production readiness by the fourth quarter of 2024. NORI and Allseas intend to equally finance all costs related to developing and getting Project Zero System into production currently estimated at less than EUR100 million. It is anticipated that NORI will not have to make any Project Zero System-related payments to Allseas until March 31, 2023. Once in production, NORI expects to pay Allseas a nodule collection and transshipment fee estimated at approximately EUR 150 per wet tonne in the first year of operations and expected to be reduced by more than 20% in the following years as Allseas scales up production to 1.3 Mtpa of wet nodules. The parties intend to further detail and revise these cost estimates in the definitive agreement contemplated by the non-binding term sheet, which the parties expect to enter into no later than December 31, 2022 following the completion of the pilot collection tests. Subject to the necessary regulatory approvals, Allseas and NORI also intend to investigate acquiring a second production vessel similar to the *Hidden Gem*, a Samsung 10000, with the potential for it to be engineered to support a higher production rate of 3 million tonnes of wet nodules per year and lower associated per tonne production cost. There can be no assurances, however, that we will enter into definitive agreements with Allseas contemplated by the non-binding term sheet in a particular time period, or at all, or on terms similar to those set forth in the non-binding term sheet, or that if such definitive agreements are entered into by us that the proposed commercial systems and second production vessel will be successfully developed or operated in a particular time period, or at all.

Maersk

On March 21, 2017, the Company entered into four charter vessel agreements with Maersk and one charter vessel agreement with Maersk UK (together, the "Maersk Supply Agreements") pursuant to which Maersk and Maersk UK agreed to supply the Company with vessels and offshore services for a total of five marine campaigns. By letter agreement on March 3, 2021, the Company and Maersk agreed to extend the arrangement until 2022.

Pursuant to the Maersk Investment and Participation Agreement dated March 15, 2017 (the "Participation Agreement"), the Company agreed, among other things, that in return for marine cruises and related project management services provided by Maersk and Maersk UK, the Company will issue that number of common shares as is equal to the final cost of each marine cruise divided by \$1.08 (subject to adjustment as described therein), upon completion of each marine cruise, and after agreement between the parties as to the calculation of the final cost to Maersk or Maersk UK for such cruise.

On March 3, 2021, the Participation Agreement with Maersk was amended whereby all costs incurred on or after February 5, 2021 pertaining to the use of the marine vessel would be paid in cash rather than through issuance of common shares. By this amendment, Maersk irrevocably waived certain pro rata participation rights that it may have had under the Participation Agreement in connection with the Business Combination and acknowledged that all amounts owing to Maersk for services rendered through February 5, 2021 in the aggregate amount of \$4.6 million had been satisfied by the issuance of 4.2 million common shares.

Our arrangements with Maersk all ended in January 2022.

Amended and Restated Registration Rights Agreement

Registration Rights

At the Closing, we, the initial shareholders, including the Sponsor (the “Sponsor Group Holders”), and certain holders of DeepGreen securities immediately prior to the Effective Time (the “DeepGreen Holders”) entered into an amended and restated registration rights agreement (the “Amended and Restated Registration Rights Agreement”), pursuant to which, among other things, the Sponsor Group Holders and the DeepGreen Holders were granted certain registration rights with respect to their respective Common Shares on the terms and subject to the conditions therein.

Lock-Up Restrictions

Under the Amended and Restated Registration Rights Agreement, the Sponsor Group Holders and the DeepGreen Holders also agreed not to effect any sale or distribution of certain of our equity securities held by them during the period ending on the earlier of (A) 180 days after the Closing, which ended on March 8, 2022, and (B) the date on which (x) the Common Shares have traded at a price that is greater than or equal to \$12.00 per share (as adjusted for stock splits, stock dividends, reorganizations, recapitalizations and the like) during any 20 trading days within any 30 consecutive trading days after the Closing, or (y) we complete a liquidation, merger, stock exchange, reorganization or other similar transaction that results in all of our public shareholders having the right to exchange their Common Shares for cash, securities or other property. Certain Common Shares held by the Sponsor Group Holders shall not be offered, sold, pledged or distributed for periods of six months, which expired on March 8, 2022, or twelve months, as applicable, and certain Common Shares held by the DeepGreen Holders shall not be offered, sold, pledged or distributed for periods of six months, which expired on March 8, 2022, or eighteen months, as applicable, subject to the exceptions described in the Amended and Restated Registration Rights Agreement.

Indemnity Agreements with Officers and Directors and Directors’ and Officers’ Liability Insurance

In connection with the Business Combination, the Company entered into indemnity agreements with each of its directors and executive officers. Each indemnity agreement provides for indemnification and advancements by the Company of certain expenses and costs relating to claims, suits or proceedings arising from his or her service to the Company, or, at the Company’s request, service to other entities, as officers or directors to the maximum extent permitted by applicable law. The Company also maintains a general liability insurance policy, which covers certain liabilities of its directors and officers arising out of claims based on acts or omissions in their capacities as directors or officers.

Policies and Procedures for Related Party Transactions

We have adopted a written related person transaction policy that sets forth the following policies and procedures for the review and approval or ratification of related person transactions.

A “Related Person Transaction” is a transaction, arrangement or relationship in which the Company or any of its subsidiaries was, is or will be a participant, the amount of which involved exceeds \$120,000, and in which any related person had, has or will have a direct or indirect material interest. Transactions involving compensation for services provided to the Company or any of its subsidiaries as an employee, consultant or director will not be considered related person transactions under this policy. A “Related Person” is:

- any person who is or was an executive officer, director, or director nominee of the Company at any time since the beginning of the Company’s last fiscal year;

[Table of Contents](#)

- a person who is or was an Immediate Family Member (as defined below) of an executive officer, director, director nominee at any time since the beginning of the Company's last fiscal year;
- any person who, at the time of the occurrence or existence of the transaction, is the beneficial owner of more than 5% of any class of the Company's voting securities (a "Significant Shareholder"); or
- any person who, at the time of the occurrence or existence of the transaction, is an Immediate Family Member of a Significant Shareholder of the Company.

An "Immediate Family Member" of a person is any child, stepchild, parent, stepparent, spouse, sibling, mother-in-law, father-in-law, son-in-law, daughter-in-law, brother-in-law or sister-in-law of such person, or any other person sharing the household of such person, other than a tenant or employee.

The Company has implemented policies and procedures designed to minimize potential conflicts of interest arising from any dealings it may have with its affiliates and to provide appropriate procedures for the disclosure of any real or potential conflicts of interest that may exist from time to time. Specifically, pursuant to its charter, the audit committee has the responsibility to review related party transactions.

Under the related person transaction policy, the related person in question or, in the case of transactions with a beneficial holder of more than 5% of the Company's voting stock, an officer with knowledge of a proposed transaction, will be required to present information regarding the proposed related person transaction to the audit committee (or to another independent body of the board of directors) for review.

To identify Related Person Transactions in advance, we expect to rely on information supplied by our executive officers, directors and certain significant shareholders. In considering related person transactions, our audit committee is expected to take into account the relevant available facts and circumstances, which may include, but are not limited to:

- the related person's interest in the transaction;
- the approximate dollar value of the amount involved in the transaction;
- the approximate dollar value of the amount of the related person's interest in the transaction without regard to the amount of any profit or loss;
- whether the transaction was undertaken in the ordinary course of business of the Company;
- whether the transaction with the related person is proposed to be, or was, entered into on terms no less favorable to the Company than terms that could have been reached with an unrelated third-party;
- the purpose of, and the potential benefits to the Company of, the transaction; and
- any other information regarding the transaction or the related person in the context of the proposed transaction that would be material to investors in light of the circumstances of the particular transaction.

The audit committee will approve only those transactions that it determines are fair to the Company and in the Company's best interests.

MATERIAL U.S. FEDERAL INCOME TAX CONSIDERATIONS

The following discussion is a summary of material U.S. federal income tax considerations applicable to you if you are a U.S. Holder (as defined below) of our Common Shares and/or Public Warrants (other than Sponsor or any of its affiliates). This discussion addresses only those U.S. Holders that hold our Common Shares and/or Public Warrants as capital assets within the meaning of Section 1221 of the Code (generally property held for investment). This summary does not discuss all aspects of U.S. federal income taxation that may be relevant to particular investors in light of their particular circumstances, or to investors subject to special tax rules, such as:

- financial institutions;
- insurance companies;
- mutual funds;
- pension plans;
- S corporations;
- broker-dealers;
- traders in securities that elect mark-to-market treatment;
- regulated investment companies;
- real estate investment trusts;
- trusts and estates;
- tax-exempt organizations (including private foundations);
- investors that hold our Common Shares or Public Warrants as part of a “straddle,” “hedge,” “conversion,” “synthetic security,” “constructive ownership transaction,” “constructive sale” or other integrated transaction for U.S. federal income tax purposes;
- investors subject to the alternative minimum tax provisions of the Code;
- U.S. Holders that have a functional currency other than the U.S. dollar;
- U.S. expatriates or former long-term residents of the United States;
- investors subject to the U.S. “inversion” rules;
- U.S. Holders owning or considered as owning (directly, indirectly, or through attribution) 5% (measured by vote or value) or more of our Common Shares;
- persons that acquired our Common Shares or Public Warrants pursuant to an exercise of employee share options, in connection with employee share incentive plans or otherwise as compensation;
- controlled foreign corporations;
- accrual method taxpayers that file applicable financial statements as described in Section 451(b) of the Code;

[Table of Contents](#)

- passive foreign investment companies (except to the limited extent provided herein); and
- persons who are not U.S. Holders, all of whom may be subject to tax rules that differ materially from those summarized below.

This summary does not discuss any state, local, or non-U.S. tax considerations, any non-income tax (such as gift or estate tax) considerations, the alternative minimum tax or the Medicare tax on net investment income. If a partnership (including an entity or arrangement treated as a partnership for U.S. federal income tax purposes) holds Common Shares or Public Warrants the tax treatment of a partner in such partnership will generally depend upon the status of the partner, the activities of the partnership and the partner and certain determinations made at the partner level. If you are a partner of a partnership holding Common Shares or Public Warrants, you are urged to consult your tax advisor regarding the tax consequences to you of the ownership and disposition of Common Shares or Public Warrants by the partnership.

This summary is based upon the Code, the U.S. Department of Treasury regulations (“Treasury Regulations”), current administrative interpretations and practices of the Internal Revenue Service (“IRS”), and judicial decisions, all as currently in effect and all of which are subject to differing interpretations or to change, possibly with retroactive effect. No assurance can be given that the IRS would not assert, or that a court would not sustain a position contrary to any of the tax considerations described below.

For purposes of this discussion, a “U.S. Holder” is a beneficial owner of Common Shares or Public Warrants, as the case may be, that is:

- an individual who is a U.S. citizen or resident of the United States;
- a corporation (including an entity treated as a corporation for U.S. federal income tax purposes) created or organized in or under the laws of the United States, any state thereof or the District of Columbia;
- an estate the income of which is includible in gross income for U.S. federal income tax purposes regardless of its source; or
- a trust (A) the administration of which is subject to the primary supervision of a U.S. court and which has one or more U.S. persons (within the meaning of the Code) who have the authority to control all substantial decisions of the trust or (B) that has in effect a valid election under applicable Treasury Regulations to be treated as a U.S. person.

Tax Consequences of Ownership and Disposition of Common Shares and Public Warrants

Dividends and Other Distributions on Common Shares

Subject to the PFIC rules discussed below under the heading “— *Passive Foreign Investment Company Rules*,” distributions on Common Shares will generally be taxable as a dividend for U.S. federal income tax purposes to the extent paid from TMC’s current or accumulated earnings and profits, as determined under U.S. federal income tax principles. Distributions in excess of TMC’s current and accumulated earnings and profits will constitute a return of capital that will be applied against and reduce (but not below zero) the U.S. Holder’s adjusted tax basis in its Common Shares. Any remaining excess will be treated as gain realized on the sale or other disposition of the Common Shares and will be treated as described below under the heading “— *Sale, Taxable Exchange or Other Taxable Disposition of Common Shares and Public Warrants*.” The amount of any such distribution will include any amounts withheld by us (or another applicable withholding agent) in respect of Canadian income taxes. Any amount treated as dividend income will be treated as foreign-source dividend income. Amounts treated as dividends that TMC pays to a U.S. Holder that is a taxable corporation generally will be taxed at regular rates and will not qualify for the dividends received deduction generally allowed to U.S. corporations in respect of dividends received from other U.S. corporations. With respect to non-corporate U.S. Holders, under tax laws currently in effect and subject to certain exceptions (including, but not limited to, dividends treated as investment income for purposes of investment interest deduction limitations), dividends generally will be taxed at the lower applicable long-term capital gains rate only if Common Shares are readily tradable on an established securities market in the United States or TMC is eligible for benefits under an applicable tax treaty with the United States, and TMC is not treated as a PFIC with respect to such U.S. Holder at the time the dividend was paid or in the preceding year and provided certain holding period requirements are met. The amount of any dividend distribution paid in Canadian dollars will be the U.S. dollar amount calculated by reference to the exchange rate in effect on the date of actual or constructive receipt, regardless of whether the payment is in fact converted into U.S. dollars at that time. A U.S. Holder may have foreign currency gain or loss if the dividend is converted into U.S. dollars after the date of receipt.

Subject to applicable limitations, non-refundable Canadian income taxes withheld from dividends on Common Shares at a rate not exceeding the rate provided by the applicable treaty with the United States will be eligible for credit against the U.S. treaty beneficiary’s U.S. federal income tax liability. The rules governing foreign tax credits are complex and U.S. Holders are urged to consult their tax advisers regarding the creditability of foreign taxes in their particular circumstances. In lieu of claiming a foreign tax credit, a U.S. Holder may deduct foreign taxes, including any Canadian income tax, in computing their taxable income, subject to generally applicable limitations under U.S. law. An election to deduct foreign taxes instead of claiming foreign tax credits applies to all foreign taxes paid or accrued in the taxable year.

Sale, Taxable Exchange or Other Taxable Disposition of Common Shares and Public Warrants

Subject to the PFIC rules discussed below under the heading “— *Passive Foreign Investment Company Rules*,” upon any sale, exchange or other taxable disposition of Common Shares or Public Warrants, a U.S. Holder generally will recognize gain or loss in an amount equal to the difference between (i) the sum of (x) the amount cash and (y) the fair market value of any other property, received in such sale, exchange or other taxable disposition and (ii) the U.S. Holder’s adjusted tax basis in such Common Shares or Public Warrants, in each case as calculated in U.S. dollars. If a U.S. Holder acquired such Common Shares or Public Warrants as part of a unit, the adjusted tax basis in the Common Shares or Public Warrants will be the portion of the acquisition cost allocated to the shares or warrants, respectively, or if such Common Shares were received upon exercise of Public Warrants, the initial basis of the Common Shares upon exercise of Public Warrants (generally determined as described below in “— *Tax Consequences of Ownership and Disposition of Common Shares and Public Warrants — Exercise or Lapse of a Public Warrant*”). Any such gain or loss generally will be capital gain or loss and will be long-term capital gain or loss if the U.S. Holder’s holding period for such Common Shares exceeds one (1) year. Long-term capital gain realized by a non-corporate U.S. Holder generally will be taxable at a reduced rate. The deduction of capital losses is subject to limitations. This gain or loss generally will be treated as U.S. source gain or loss.

Exercise or Lapse of a Public Warrant

A U.S. Holder generally will not recognize taxable gain or loss on the acquisition of a Common Share upon exercise of a Public Warrant for cash. The U.S. Holder's tax basis in the Common Share received upon exercise of the Public Warrant generally will be an amount equal to the sum of the U.S. Holder's initial investment in the Public Warrant (*i.e.*, its tax basis, calculated in U.S. dollars) and the exercise price. The U.S. Holder's holding period for a Common Share received upon exercise of the of a Public Warrant will begin on the day following the date of exercise (or possibly the date of exercise) of the Public Warrant and will not include the period during which the U.S. Holder held the Public Warrant. If a Public Warrant is allowed to lapse unexercised, a U.S. Holder generally will recognize a capital loss equal to such U.S. Holder's tax basis in the warrant (calculated in U.S. dollars). Such loss will be long-term if the warrant has been held for more than one (1) year.

The tax consequences of a cashless exercise of a Public Warrant are not clear under current tax law. A cashless exercise may not be taxable, either because the exercise is not a realization event or because the exercise is treated as a recapitalization for U.S. federal income tax purposes. In either situation, a U.S. Holder's tax basis in the shares of Common Shares received generally should equal the U.S. Holder's tax basis in the Public Warrants. If the cashless exercise was not a realization event, it is unclear whether a U.S. Holder's holding period for the Common Shares would be treated as commencing on the date of exercise of the Public Warrant or the day following the date of exercise of the Public Warrant. If the cashless exercise were treated as a recapitalization, the holding period of the shares of Common Shares received would include the holding period of the Public Warrant.

It is also possible that a cashless exercise may be treated in part as a taxable exchange in which gain or loss would be recognized. In such event, a U.S. Holder may be deemed to have surrendered a number of Public Warrants having a value equal to the exercise price for the total number of Public Warrants to be exercised. The U.S. Holder would recognize capital gain or loss in an amount equal to the difference between the fair market value of the Public Warrants deemed surrendered and the U.S. Holder's tax basis in the Public Warrants deemed surrendered. In this case, a U.S. Holder's tax basis in the shares of Common Shares received would equal the sum of the U.S. Holder's tax basis in the Public Warrants exercised, and the exercise price of such Public Warrants. It is unclear whether a U.S. Holder's holding period for the shares of Common Shares would commence on the date of exercise of the Public Warrant or the day following the date of exercise of the Public Warrant; in either case, the holding period will not include the period during which the U.S. Holder held the Public Warrant.

Due to the absence of authority on the U.S. federal income tax treatment of a cashless exercise, including when a U.S. Holder's holding period would commence with respect to the shares of Common Shares received, there can be no assurance as to which, if any, of the alternative tax consequences and holding periods described above would be adopted by the IRS or a court of law. Accordingly, U.S. Holders are urged to consult their tax advisors regarding the tax consequences of a cashless exercise.

If TMC redeems Public Warrants for cash or if TMC purchases Public Warrants in an open market transaction, such redemption or purchase generally will be treated as a taxable disposition to the U.S. Holder, taxed as described above under "*— Sale, Taxable Exchange or Other Taxable Disposition of Common Shares and TMC Warrants.*"

Adjustment to Exercise Price

Under Section 305 of the Code, if certain adjustments are made (or not made) to the number of shares to be issued upon the exercise of a Public Warrant or to the Public Warrant's exercise price, a U.S. Holder may be deemed to have received a constructive distribution with respect to the warrant, which could result in adverse consequences for the U.S. Holder, including the inclusion of dividend income (with the consequences generally as described above under the heading "*— Dividends and Other Distributions on Common Shares*"). The rules governing constructive distributions as a result of certain adjustments with respect to a Public Warrant are complex, and U.S. Holders are urged to consult their tax advisors on the tax consequences any such constructive distribution with respect to a Public Warrant.

Passive Foreign Investment Company Rules

The treatment of U.S. Holders of Common Shares and Public Warrants could be materially different from that described above if TMC is treated as a PFIC for U.S. federal income tax purposes.

[Table of Contents](#)

If TMC is a PFIC for any taxable year, U.S. Holders of Common Shares or Public Warrants may be subject to adverse U.S. federal income tax consequences with respect to dispositions of, and distributions with respect to Common Shares, and may be subject to additional reporting requirements.

A non-U.S. corporation will be classified as a PFIC for U.S. federal income tax purposes if either (i) at least 75% of its gross income in a taxable year, including its pro rata share of the gross income of any corporation in which it is considered to own at least 25% of the shares by value, is passive income (the “Income Test”) or (ii) at least 50% of its assets in a taxable year (ordinarily determined based on fair market value and averaged quarterly over the year), including its pro rata share of the assets of any corporation in which it is considered to own at least 25% of the shares by value, are held for the production of, or produce, passive income (the “Asset Test”). Passive income generally includes dividends, interest, rents and royalties (other than rents or royalties derived from the active conduct of a trade or business) and gains from the disposition of passive assets.

Based on our initial assessment, we do not believe that TMC was classified as a PFIC for U.S. federal income tax purposes for the taxable year ending December 31, 2021. However, the application of the PFIC rules is subject to uncertainty in several respects, and we cannot assure you that the IRS will not take a contrary position. Furthermore, whether TMC is classified as a PFIC is a factual determination that must be made annually after the close of each taxable year. Accordingly, there can be no assurance with respect to TMC’s status as a PFIC for the current or any future taxable year. Although PFIC status is generally determined annually, if TMC is determined to be a PFIC for any taxable year (or portion thereof) that is included in the holding period of a U.S. Holder of Common Shares and the U.S. Holder did not make either a qualifying electing fund (“QEF”) election or a mark-to-market election (collectively, the “PFIC Elections”) for the first taxable year of TMC in which it was treated as a PFIC, and in which the U.S. Holder held (or was deemed to hold) such shares, or such U.S. Holder does not otherwise make an applicable purging election described below, such U.S. Holder generally will be subject to special and adverse rules with respect to (i) any gain recognized by the U.S. Holder on the sale or other disposition of its Common Shares and (ii) any “excess distribution” made to the U.S. Holder (generally, any distributions to such U.S. Holder during a taxable year of the U.S. Holder that are greater than 125% of the average annual distributions received by such U.S. Holder in respect of the Common Shares during the three preceding taxable years of such U.S. Holder or, if shorter, such U.S. Holder’s holding period for the Common Shares).

Under these rules:

- the U.S. Holder’s gain or excess distribution will be allocated ratably over the U.S. Holder’s holding period for the Common Shares;
- the amount allocated to the U.S. Holder’s taxable year in which the U.S. Holder recognized the gain or received the excess distribution, and to any period in the U.S. Holder’s holding period before the first day of TMC’s first taxable year in which TMC is a PFIC, will be taxed as ordinary income;
- the amount allocated to other taxable years (or portions thereof) of the U.S. Holder and included in its holding period will be taxed at the highest tax rate in effect for that year and applicable to the U.S. Holder; and
- an additional tax equal to the interest charge generally applicable to underpayments of tax will be imposed on the U.S. Holder with respect to the tax attributable to each such other taxable year of the U.S. Holder.

PFIC Elections

In general, if TMC is determined to be a PFIC, a U.S. Holder may avoid the adverse PFIC tax consequences described above in respect of Common Shares by making and maintaining a timely and valid QEF election (if eligible to do so) to include in income its pro rata share of TMC’s net capital gains (as long-term capital gain) and other earnings and profits (as ordinary income), on a current basis, in each case whether or not distributed, in the first taxable year of the U.S. Holder in which or with which TMC’s taxable year ends and each subsequent taxable year. A U.S. Holder generally may make a separate election to defer the payment of taxes on undistributed income inclusions under the QEF rules, but if deferred, any such taxes will be subject to an interest charge.

In order to comply with the requirements of a QEF election, a U.S. Holder must receive a PFIC Annual Information Statement from us. If TMC determines that it is a PFIC, TMC intends to provide the information necessary for U.S. Holders to make or maintain a QEF election, including information necessary to determine the appropriate income inclusion amounts for purposes of the QEF election. However, there is also no assurance that TMC will have timely knowledge of its status as a PFIC in the future or of the required information to be provided.

Alternatively, if TMC is a PFIC and Common Shares constitute “marketable stock,” a U.S. Holder may avoid the adverse PFIC tax consequences discussed above if such U.S. Holder makes a mark-to-market election with respect to such shares for the first taxable year in which it holds (or is deemed to hold) Common Shares and each subsequent taxable year. Such U.S. Holder generally will include for each of its taxable years as ordinary income the excess, if any, of the fair market value of its Common Shares at the end of such year over its adjusted basis in its Common Shares. The U.S. Holder also will recognize an ordinary loss in respect of the excess, if any, of its adjusted basis of its Common Shares over the fair market value of its Common Shares at the end of its taxable year (but only to the extent of the net amount of previously included income as a result of the mark-to-market election). The U.S. Holder’s basis in its Common Shares will be adjusted to reflect any such income or loss amounts, and any further gain recognized on a sale or other taxable disposition of its Common Shares will be treated as ordinary income. Currently, a mark-to-market election may not be made with respect to Public Warrants.

The mark-to-market election is available only for “marketable stock,” generally, stock that is regularly traded on a national securities exchange that is registered with the SEC, including the Nasdaq (on which Common Shares are intended to be listed), or on a foreign exchange or market that the IRS determines has rules sufficient to ensure that the market price represents a legitimate and sound fair market value. If made, a mark-to-market election would be effective for the taxable year for which the election was made and for all subsequent taxable years unless the Common Shares cease to qualify as “marketable stock” for purposes of the PFIC rules or the IRS consents to the revocation of the election. U.S. Holders are urged to consult their tax advisors regarding the availability and tax consequences of a mark-to-market election with respect to Common Shares under their particular circumstances.

The application of the PFIC rules to Public Warrants is unclear. A proposed Treasury Regulation issued under these rules generally treats an “option” (which would include a Public Warrant) to acquire the stock of a PFIC as stock of the PFIC, while a final Treasury Regulation issued under these rules provides that the holder of an option is not entitled make the PFIC Elections. Another proposed Treasury Regulation provides that for purposes of the PFIC rules, stock acquired upon the exercise of an option will be deemed to have a holding period that includes the period the U.S. Holder held the Public Warrants. As a result, if the proposed Treasury Regulations were to apply, and a U.S. Holder were to sell or otherwise dispose of such Public Warrants (other than upon exercise of such Public Warrants for cash) and TMC was a PFIC at any time during the U.S. Holder’s holding period of such Public Warrants, any gain recognized generally would be treated as an excess distribution, taxed as described above. If a U.S. Holder that exercises such Public Warrants properly makes and maintains a QEF election with respect to the newly acquired Common Shares (or has previously made a QEF election with respect to Common Shares), the QEF election will apply to the newly acquired Common Shares. Notwithstanding such QEF election, if the proposed Treasury Regulations were to apply, the adverse tax consequences relating to PFIC shares, adjusted to take into account the current income inclusions resulting from the QEF election, would continue to apply with respect to such newly acquired Common Shares (which generally will be deemed to have a holding period for purposes of the PFIC rules that includes the period the U.S. Holder held the Public Warrants), unless the U.S. Holder makes a purging election under the PFIC rules described in the following paragraph.

If TMC is treated as a PFIC and a U.S. Holder failed or was unable to timely make a PFIC Election for prior periods, a U.S. Holder might seek make a purging election to rid the Common Shares of the PFIC taint. A purging election might be desirable if, for example, a U.S. Holder misses the deadline for filing a QEF election for a prior period, or if the Common Shares were acquired through the exercise of Public Warrants with a holding period that includes the period the warrants were held, either as a result of the application of the proposed Treasury Regulations, or because the Common Shares are acquired through a cashless exercise that is treated as a recapitalization. Under one type of purging election, the U.S. Holder will be deemed to have sold such shares at their fair market value and any gain recognized on such deemed sale will be treated as an excess distribution, as described above. Under another type of purging election, TMC will be deemed to have made a distribution to the U.S. Holder of such U.S. Holder’s pro rata share of TMC’s earnings and profits as determined for U.S. federal income tax purposes. In order for the U.S. Holder to make the second election, TMC must also be determined to be a “controlled foreign corporation” as defined by the Code (which is not currently expected to be the case). As a result of either purging election, the U.S. Holder will have a new basis and holding period in the Common Shares acquired upon the exercise of the Public Warrants solely for purposes of the PFIC rules.

The QEF election is made on a shareholder-by-shareholder basis and, once made, can be revoked only with the consent of the IRS. A U.S. Holder generally makes a QEF election by attaching a completed IRS Form 8621 (Information Return by a Shareholder of a Passive Foreign Investment Company or Qualified Electing Fund), including the information provided in a PFIC Annual Information Statement, to a timely filed U.S. federal income tax return for the tax year to which the election relates. Retroactive QEF elections generally may be made only by filing a protective statement with such return and if certain other conditions are met or with the consent of the IRS. U.S. Holders are urged to consult their tax advisors regarding the availability and tax consequences of a retroactive QEF election under their particular circumstances.

Related PFIC Rules

If TMC is a PFIC and, at any time, has a foreign subsidiary that is classified as a PFIC, a U.S. Holder generally would be deemed to own a proportionate amount of the shares of such lower-tier PFIC, and generally could incur liability for the deferred tax and interest charge described above if TMC receives a distribution from, or disposes of all or part of its interest in, the lower-tier PFIC, or the U.S. Holder otherwise was deemed to have disposed of an interest in the lower-tier PFIC. In certain circumstances, a U.S. Holder may make a QEF election with respect to any lower-tier PFIC.

A U.S. Holder that owns (or is deemed to own) shares in a PFIC during any taxable year of the U.S. Holder, may have to file an IRS Form 8621 (whether or not a QEF or mark-to-market election is made) and to provide such other information as may be required by the U.S. Treasury Department. Failure to do so, if required, will extend the statute of limitations applicable to such U.S. Holder until such required information is furnished to the IRS.

The rules dealing with PFICs and with the QEF and mark-to-market elections are very complex and are affected by various factors in addition to those described above. Accordingly, U.S. Holders of Common Shares and Public Warrants are urged to consult their own tax advisors concerning the application of the PFIC rules to TMC securities under their particular circumstances.

Information Reporting and Backup Withholding

Payments of dividends and sales proceeds that are made within the United States or through certain U.S.-related financial intermediaries are subject to information reporting, and may be subject to backup withholding, unless (i) the U.S. Holder is a corporation or other exempt recipient or (ii) in the case of backup withholding, the U.S. Holder provides a correct taxpayer identification number and certifies that it is not subject to backup withholding.

The amount of any backup withholding from a payment to a U.S. Holder will be allowed as a credit against the holder's U.S. federal income tax liability and may entitle it to a refund, provided that the required information is timely furnished to the IRS.

The U.S. federal income tax discussion set forth above is included for general information only and may not be applicable to you depending upon your particular situation. You are urged to consult your own tax advisor with respect to the tax consequences to you of the ownership and disposition of our Common Shares and Public Warrants including the tax consequences under state, local, estate, foreign and other tax laws and tax treaties and the possible effects of changes in U.S. or other tax laws.

MATERIAL CANADIAN FEDERAL INCOME TAX CONSIDERATIONS

The following is, as of the date of this prospectus, a summary of the principal Canadian federal income tax considerations pursuant to the *Income Tax Act* (Canada) and the regulations thereunder (the “Tax Act”) that generally apply to the acquisition, holding or disposition of Common Shares and Public Warrants by a person who is neither resident nor deemed to be resident in Canada for purposes of the Tax Act and acquires a beneficial interest in Common Shares or Public Warrants (a “Non-Resident Holder”).

This summary applies only to a Non-Resident Holder who, at all relevant times, for purposes of the Tax Act:

- holds Common Shares or Public Warrants as capital property;
- does not, and is not deemed to, use or hold Common Shares or Public Warrants in the course of carrying on a business in Canada; and
- deals at arm’s length and is not affiliated with us.

Special rules, which are not discussed in this summary, may apply to a Non-Resident Holder that is an insurer that carries on an insurance business in Canada and elsewhere.

This summary is based on the current provisions of the Tax Act, all specific proposals to amend the Tax Act publicly announced by or on behalf of the Minister of Finance (Canada) prior to the date hereof (“Tax Proposals”), and an understanding of the current administrative policies and assessing practices of the Canada Revenue Agency (the “CRA”) made publicly available prior to the date hereof. This summary assumes the Tax Proposals will be enacted in the form proposed, however, no assurance can be given that the Tax Proposals will be enacted in the form proposed, or at all. Except for the Tax Proposals, this summary does not take into account or anticipate any changes in law or administrative policies or assessing practices of the CRA, whether by legislative, governmental or judicial action, nor does it take into account other federal or any provincial, territorial or foreign income tax legislation or considerations, which may differ significantly from those discussed herein.

Generally, for the purposes of the Tax Act, all amounts relating to the acquisition, holding or disposition of Common Shares and Public Warrants (including dividends, adjusted cost base and proceeds of disposition) must be expressed in Canadian dollars. Amounts denominated in U.S. dollars must be converted into Canadian dollars using the applicable rate of exchange (for the purposes of the Tax Act) quoted by the Bank of Canada on the date such amounts arose, or such other rate of exchange as is acceptable to the CRA.

This summary is not exhaustive of all possible Canadian federal income tax considerations that apply to an investment in Common Shares and Public Warrants. Moreover, the income and other tax consequences of acquiring, holding or disposing of Common Shares or Public Warrants will vary depending on an investor’s particular circumstances. Accordingly, this summary is of a general nature only and is not intended to be, nor should it be construed to be, legal or tax advice to any investor. Consequently, investors should consult their own tax advisors for advice with respect to the income tax consequences of an investment in Common Shares and Public Warrants based on their particular circumstances.

Adjusted Cost base of Common Shares

The adjusted cost base to a Non-Resident Holder of a Common Share acquired pursuant to this offering will be determined by averaging the cost of that Common Share with the adjusted cost base (determined immediately before the acquisition of the Common Share) of all other Common Shares held as capital property by the Non-Resident Holder immediately prior to such acquisition.

Exercise of Public Warrants

No gain or loss will be realized by a Non-Resident Holder upon the exercise of a Public Warrant to acquire a Common Share. A Non-Resident Holder's cost of a Common Share so acquired will equal the aggregate of such Non-Resident Holder's adjusted cost base of the Public Warrant exercised plus the exercise price paid for such Common Share. The Non-Resident Holder's adjusted cost base of such Common Share will be determined by averaging the cost of the Common Share with the adjusted cost base (determined immediately before the acquisition of the Common Share) of all other Common Shares held as capital property by such Non-Resident Holder immediately prior to such acquisition.

Dividends on Common Shares

Every Non-Resident Holder is liable to pay a Canadian withholding tax on every dividend that is or is deemed to be paid or credited to the Non-Resident Holder on the Non-Resident Holder's Common Shares. The statutory rate of withholding tax is 25% of the gross amount of the dividend paid. Generally, the Canada — United States Tax Convention (1980), as amended (the "Treaty") reduces the statutory rate with respect to dividends paid to a Non-Resident Holder who is resident in the U.S. for purposes of the Treaty, the beneficial owner of such dividends, and entitled to benefits under the Treaty, to 15% of the gross amount of the dividend. The Company is required to withhold the applicable tax from dividends payable to the Non-Resident Holder, and to remit the tax to the Receiver General of Canada for the account of the Non-Resident Holder.

Dispositions of Common Shares and Public Warrants

A Non-Resident Holder will not be subject to tax under the Tax Act on any capital gain realized on a disposition or deemed disposition of Common Shares (other than a disposition to us, which may result in a deemed dividend, unless purchased by us in the open market in the manner in which Common Shares are normally purchased by any member of the public in the open market, in which case other considerations may arise) or Public Warrants, unless the Common Shares or Public Warrants are "taxable Canadian property" of the Non-Resident Holder for purposes of the Tax Act and the Non-Resident Holder is not entitled to relief under the Treaty.

Generally, the Common Shares and Public Warrants will not constitute "taxable Canadian property" of a Non-Resident Holder at a particular time provided that the Common Shares are listed at that time on a "designated stock exchange" for purposes of the Tax Act (which currently includes the Nasdaq), unless, at any particular time during the 60-month period that ends at that time, both of the following are true:

1. (a) the Non-Resident Holder, (b) persons with whom the Non-Resident Holder does not deal with at arm's length, (c) partnerships in which the Non-Resident Holder or a person described in (b) holds an interest directly or indirectly through one or more partnerships, or (d) any combination of (a) to (c) owned 25% or more of the issued shares of any class or series of our capital stock; and
2. more than 50% of the fair market value of the Common Shares was derived directly or indirectly from one or any combination of: (a) real or immovable properties situated in Canada, (b) "Canadian resource properties" (as defined in the Tax Act), (c) "timber resource properties" (as defined in the Tax Act), and (d) options in respect of, or interests in, or for civil law rights in, property in any of the foregoing whether or not the property exists.

NOTWITHSTANDING THE FOREGOING, IN CERTAIN CIRCUMSTANCES SET OUT IN THE TAX ACT, COMMON SHARES AND PUBLIC WARRANTS MAY BE DEEMED TO BE TAXABLE CANADIAN PROPERTY. NON-RESIDENT HOLDERS WHOSE COMMON SHARES OR PUBLIC WARRANTS MAY CONSTITUTE TAXABLE CANADIAN PROPERTY SHOULD CONSULT THEIR OWN TAX ADVISORS.

PLAN OF DISTRIBUTION

We are registering the issuance by us of up to 9,500,000 of our Common Shares issuable upon the exercise of the Private Placement Warrants and 15,000,000 of our Common Shares issuable upon the exercise of the Public Warrants. We are also registering the resale by the Selling Securityholders of up to 9,500,000 Private Placement Warrants and up to 264,438,297 of our Common Shares.

The Selling Securityholders may offer and sell, from time to time, their respective Common Shares, and Private Placement Warrants covered by this prospectus. The Selling Securityholders will act independently of us in making decisions with respect to the timing, manner and size of each sale. Such sales may be made on one or more exchanges or in the over-the-counter market or otherwise, at prices and under terms then prevailing or at prices related to the then current market price or in negotiated transactions. The Selling Securityholders may sell their securities by one or more of, or a combination of, the following methods:

- purchases by a broker-dealer as principal and resale by such broker-dealer for its own account pursuant to this prospectus;
- ordinary brokerage transactions and transactions in which the broker solicits purchasers;
- block trades in which the broker-dealer so engaged will attempt to sell the shares as agent but may position and resell a portion of the block as principal to facilitate the transaction;
- an over-the-counter distribution in accordance with the rules of Nasdaq;
- through trading plans entered into by a Selling Securityholder pursuant to Rule 10b5-1 under the Exchange Act that are in place at the time of an offering pursuant to this prospectus and any applicable prospectus supplement hereto that provide for periodic sales of their securities on the basis of parameters described in such trading plans;
- short sales;
- distribution to employees, members, limited partners or stockholders of the Selling Securityholders;
- through the writing or settlement of options or other hedging transaction, whether through an options exchange or otherwise;
- by pledge to secured debts and other obligations;
- delayed delivery arrangements;
- to or through underwriters or agents;
- in “at the market” offerings, as defined in Rule 415 under the Securities Act, at negotiated prices, at prices prevailing at the time of sale or at prices related to such prevailing market prices, including sales made directly on a national securities exchange or sales made through a market maker other than on an exchange or other similar offerings through sales agents;
- in privately negotiated transactions;
- in options transactions; and
- through a combination of any of the above methods of sale, as described below, or any other method permitted pursuant to applicable law.

In addition, any securities that qualify for sale pursuant to Rule 144 may be sold under Rule 144 rather than pursuant to this prospectus.

To the extent required, this prospectus may be amended or supplemented from time to time to describe a specific plan of distribution. In connection with distributions of the securities or otherwise, the Selling Securityholders may enter into hedging transactions with broker-dealers or other financial institutions. In connection with such transactions, broker-dealers or other financial institutions may engage in short sales of the securities in the course of hedging the positions they assume with Selling Securityholders. The Selling Securityholders may also sell the securities short and redeliver the securities to close out such short positions.

The Selling Securityholders may also enter into option or other transactions with broker-dealers or other financial institutions which require the delivery to such broker-dealer or other financial institution of securities offered by this prospectus, which securities such broker-dealer or other financial institution may resell pursuant to this prospectus (as supplemented or amended to reflect such transaction). The Selling Securityholders may also pledge securities to a broker-dealer or other financial institution, and, upon a default, such broker-dealer or other financial institution, may effect sales of the pledged securities pursuant to this prospectus (as supplemented or amended to reflect such transaction).

In effecting sales, broker-dealers or agents engaged by the Selling Securityholders may arrange for other broker-dealers to participate. Broker-dealers or agents may receive commissions, discounts or concessions from the Selling Securityholders in amounts to be negotiated immediately prior to the sale.

In offering the securities covered by this prospectus, the Selling Securityholders and any broker-dealers who execute sales for the Selling Securityholders may be deemed to be “underwriters” within the meaning of the Securities Act in connection with such sales. Any profits realized by the Selling Securityholders and the compensation of any broker-dealer may be deemed to be underwriting discounts and commissions. Certain of our stockholders have entered into lock-up agreements.

In order to comply with the securities laws of certain states, if applicable, the securities must be sold in such jurisdictions only through registered or licensed brokers or dealers. In addition, in certain states the securities may not be sold unless they have been registered or qualified for sale in the applicable state or an exemption from the registration or qualification requirement is available and is complied with.

We will make copies of this prospectus available to the Selling Securityholders for the purpose of satisfying the prospectus delivery requirements of the Securities Act. The Selling Securityholders may indemnify any broker-dealer that participates in transactions involving the sale of the securities against certain liabilities, including liabilities arising under the Securities Act.

At the time a particular offer of securities is made, if required, a prospectus supplement will be distributed that will set forth the number of securities being offered and the terms of the offering, including the name of any underwriter, dealer or agent, the purchase price paid by any underwriter, any discount, commission and other item constituting compensation, any discount, commission or concession allowed or reallocated or paid to any dealer, and the proposed selling price to the public.

A holder of Private Placement Warrants or Public Warrants may exercise its Private Placement Warrants or Public Warrants in accordance with the Warrant agreements on or before the expiration date set forth therein by surrendering, at the office of the Warrant Agent, Continental Stock Transfer & Trust Company, the certificate evidencing such Private Placement Warrants or Public Warrants, with the form of election to purchase set forth thereon, properly completed and duly executed, accompanied by full payment of the exercise price and any and all applicable taxes due in connection with the exercise of the Private Placement Warrants or Public Warrants, subject to any applicable provisions relating to cashless exercises in accordance with the Warrant agreements.

We have agreed to indemnify certain of the Selling Securityholders against certain liabilities, including certain liabilities under the Securities Act, the Exchange Act or other federal or state law.

We have agreed with certain Selling Securityholders pursuant to the Registration Rights Agreement to use our commercially reasonable efforts to keep the registration statement of which this prospectus constitutes a part effective until such time as all securities covered by this prospectus have been sold or otherwise cease to be registrable securities.

We have also agreed with the PIPE Investors pursuant to the PIPE Investor Subscription Agreements to cause the registration statement to remain effective until the earlier of (i) three years (in the case of the Subscription Agreements) from the effective date of the registration statement, (ii) the date the Selling Securityholder ceases to hold the shares covered by the registration statement or (iii) the first date on which the Selling Securityholder can sell all of its shares under Rule 144 of the Securities Act without restriction.

Amended and Restated Registration Rights Agreement

At the Closing, the Company, the initial shareholders, including the Sponsor (the “Sponsor Group Holders”), and certain holders of DeepGreen securities immediately prior to the Effective Time (the “DeepGreen Holders”) entered into an amended and restated registration rights agreement (the “Amended and Restated Registration Rights Agreement”), pursuant to which, among other things, the Sponsor Group Holders and the DeepGreen Holders were granted certain registration rights with respect to their respective Common Shares on the terms and subject to the conditions therein. The Sponsor Group Holders and the DeepGreen Holders also agreed not to effect any sale or distribution of certain equity securities of the Company held by them during the period ending on the earlier of (A) 180 days after the Closing, which ended on March 8, 2022 and (B) the date on which (x) the Common Shares have traded at a price that is greater than or equal to \$12.00 per share (as adjusted for stock splits, stock dividends, reorganizations, recapitalizations and the like) during any 20 trading days within any 30 consecutive trading days after the Closing, or (y) we complete a liquidation, merger, stock exchange, reorganization or other similar transaction that results in all of our public stockholders having the right to exchange their Common Shares for cash, securities or other property. Certain Common Shares held by the Sponsor Group Holders shall not be offered, sold, pledged or distributed for periods of six months, which ended on March 8, 2022 or twelve months, as applicable, and certain Common Shares held by the DeepGreen Holders shall not be offered, sold, pledged or distributed for periods of six months or eighteen months, as applicable, subject to the exceptions described in the Amended and Restated Registration Rights Agreement.

LEGAL MATTERS

Fasken Martineau DuMoulin LLP (“Fasken”) has passed upon the validity of the Common Shares offered by this prospectus and certain other legal matters related to Canadian law. Mintz, Levin, Cohn, Ferris, Glovsky and Popeo, P.C. (“Mintz”) has passed upon the validity of the Warrants and certain other legal matters. Fasken and Mintz own 14,630 and 36,361 Common Shares, respectively.

EXPERTS

The financial statements of TMC the metals company Inc. as of December 31, 2021 and 2020 and for the years then ended included in this prospectus have been audited by Ernst & Young LLP, independent registered public accounting firm, as set forth in their report thereon, appearing elsewhere herein, and are included in reliance upon such report given on the authority of such firm as experts in accounting and auditing.

ENFORCEMENT OF CIVIL LIABILITIES

We are incorporated under the laws of British Columbia, Canada and, as a result, the rights of the holders of our securities will be governed by Canadian law and our amended organizational documents. All or substantially all of our assets are located outside the United States, and substantially all of our business, including our operations, is conducted outside the United States. In addition, some of our directors and officers are nationals and/or residents of countries other than the United States, and all or a substantial portion of such persons' assets may be located outside the United States. As a result, it could be difficult or impossible for you to effect service of process on these individuals in the United States in the event that you believe that your rights have been infringed under applicable securities laws or otherwise or to enforce in the United States judgments obtained in U.S. courts against us or those persons based on civil liability provisions of the U.S. securities laws. There can be no assurance that U.S. investors will be able to enforce against us, members of our board of directors, officers or certain experts named herein who are residents of Canada or other countries outside the United States, any judgments in civil and commercial matters, including judgments under the federal securities laws. There is uncertainty with respect to whether a Canadian court would take jurisdiction on a matter of liability predicated solely upon U.S. federal securities laws, and uncertainty with respect to whether a Canadian court would enforce a foreign judgement on liabilities predicated upon the securities laws of the United States.

WHERE YOU CAN FIND MORE INFORMATION

We have filed a registration statement on Form S-1, including exhibits, under the Securities Act of 1933, as amended, with respect to the securities offered by this prospectus. This prospectus does not contain all of the information included in the registration statement. For further information pertaining to us and our securities, you should refer to the registration statement and our exhibits.

In addition, we file annual, quarterly and current reports, proxy statements and other information with the SEC. Our SEC filings are available to the public on a website maintained by the SEC located at www.sec.gov. We also maintain a website at www.metals.co. Through our website, we make available, free of charge, annual, quarterly and current reports, proxy statements and other information as soon as reasonably practicable after they are electronically filed with, or furnished to, the SEC. The information contained on, or that may be accessed through, our website is not part of, and is not incorporated into, this prospectus. We include our website address in this prospectus only as an inactive textual reference. Information contained in our website does not constitute a part of this prospectus or our other filings with the SEC.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Shareholders and the Board of Directors of TMC the metals company Inc.

Opinion on the Financial Statements

We have audited the accompanying consolidated balance sheets of TMC the metals company Inc. (the “Company”) as of December 31, 2021 and 2020, the related consolidated statements of loss and comprehensive loss, changes in shareholders’ equity and cash flows for each of the two years in the period ended December 31, 2021, and the related notes (collectively referred to as the “consolidated financial statements”). In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2021 and 2020, and the results of its operations and its cash flows for each of the two years in the period ended December 31, 2021, in conformity with U.S. generally accepted accounting principles.

Basis for Opinion

These financial statements are the responsibility of the Company’s management. Our responsibility is to express an opinion on the Company’s financial statements based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) (the “PCAOB”) and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. The Company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. As part of our audits, we are required to obtain an understanding of internal control over financial reporting but not for the purpose of expressing an opinion on the effectiveness of the Company’s internal control over financial reporting. Accordingly, we express no such opinion.

Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that our audits provide a reasonable basis for our opinion.

/s/ Ernst & Young LLP

We have served as the Company’s auditor since 2012.

TMC the metals company Inc.
Notes to Consolidated Financial Statements
(in thousands of US Dollars, except share, per share amounts and unless otherwise stated)

1. Nature of Operations

TMC the metals company Inc. (“TMC” or the “Company”), formerly known as Sustainable Opportunities Acquisition Corporation (“SOAC”), was incorporated as a Cayman Islands exempted company limited by shares on December 18, 2019 and continued as a corporation under the laws of the province of British Columbia, Canada on September 9, 2021. On September 9, 2021, the Company completed its business combination (the “Business Combination”) with DeepGreen Metals Inc. (“DeepGreen”) (Note 6). The Company’s corporate office, registered address and records office is located at 10th floor, 595 Howe Street, Vancouver, British Columbia, Canada, V6C 2T5. The Company’s common shares and warrants to purchase common shares are listed for trading on the Nasdaq Global Select Market (“Nasdaq”) under tickers “TMC” and “TMCWW”, respectively. In connection with closing of the Business Combination, DeepGreen merged with a wholly-owned subsidiary of SOAC and became a wholly-owned subsidiary of the Company. DeepGreen was determined to be the accounting acquirer and therefore, all information prior to the Business Combination, including the prior year financial information, represents the financial condition and operating results of DeepGreen.

The Company is a deep-sea minerals exploration company focused on the collection, processing and refining of polymetallic nodules found on the seafloor in international waters of the Clarion Clipperton Zone in the Pacific Ocean (“CCZ”), located approximately 1,300 nautical miles southwest of San Diego, California. These nodules contain high grades of four metals (nickel, copper, cobalt, manganese) critical for the transition to clean energy and infrastructure buildout.

Exploration and exploitation of seabed minerals in international waters is regulated by the International Seabed Authority (the “ISA”), an intergovernmental organization established in 1994 pursuant to the United Nations Convention on the Law of the Sea (“UNCLOS”). ISA contracts are granted to sovereign states or have to be sponsored by a sovereign state. The Company’s wholly-owned subsidiary, Nauru Ocean Resources Inc. (“NORI”), was granted an exploration contract by the ISA in July 2011 under the sponsorship of the Republic of Nauru (“Nauru”) giving NORI exclusive rights to explore for polymetallic nodules in an area covering 74,830 km² in the CCZ (“NORI Area”). On March 31, 2020, the Company acquired Tonga Offshore Mining Limited (“TOML”), which was granted an exploration contract by the ISA in January 2012 and has exclusive rights to explore for polymetallic nodules covering an area of 74,713 km² in the CCZ (“TOML Area”) under the sponsorship of the Kingdom of Tonga (“Tonga”). Marawa Research and Exploration Limited (“Marawa”), an entity owned and sponsored by the Republic of Kiribati (“Kiribati”), was granted rights by the ISA to polymetallic nodules exploration in an area of 74,990 km² in the CCZ (“Marawa Area”). The Company entered into an option agreement with Marawa to purchase such tenements granted to exclusively collect nodules from the Marawa Area in return for a royalty payable to Marawa. The Company is working with its strategic partner, Allseas Group S.A. (“Allseas”), to develop a system to collect, lift and transport nodules from the seafloor to shore and to subsequently convert that system into an early commercial production system. Maersk Supply Service A/S (“Maersk”) previously provided marine vessel operations and project management services for resource definition and environmental offshore campaigns. The agreement with Maersk ended in January 2022, following the completion of the NORI Area D baseline campaigns.

The realization of the Company’s assets and attainment of profitable operations is dependent upon many factors including, among other things: financing being arranged by the Company to continue operations, development of a nodule collection system for the recovery of polymetallic nodules from the seafloor as well as development of processing technology for the treatment of polymetallic nodules, the establishment of mineable reserves, the commercial and technical feasibility of seafloor polymetallic nodule collection and processing, metal prices, and regulatory approvals and environmental permitting for commercial operations. The outcome of these matters cannot presently be determined because they are contingent on future events and may not be fully under the Company’s control.

Since March 2020, several measures have been implemented by the governments in Canada, the United States of America (“US”), Australia, and the rest of the world in the form of office closures and limiting the movement of personnel in response to the increased impact from the novel coronavirus (“COVID-19”). While the impact of COVID-19 has not been significant to the Company’s business operations to date, the current circumstances are dynamic and could negatively impact the Company’s business operations, exploration and development plans, results of operations, financial position, and cash flows.

2. Basis of Presentation

Statement of Compliance

These consolidated financial statements have been prepared in accordance with Generally Accepted Accounting Principles in the United States (“U.S. GAAP”) and include the accounts of TMC and its wholly-owned subsidiaries.

All share and per share amounts have been adjusted to reflect the impact of the Business Combination (Note 6).

Basis of Measurement

These consolidated financial statements have been prepared under the historical cost convention, except for warrants liability that has been measured at fair value, and are presented in US dollars.

Consolidation

These consolidated financial statements include the financial statements of the Company and its subsidiaries. The principal subsidiaries of the Company, their activities, and their geographic locations as at December 31, 2021 were as follows:

Subsidiary	Principal Activity	Location	Proportion of Interest Held by the Company
DeepGreen Metals ULC	Mineral exploration	Canada	100%
DeepGreen Engineering Pte. Ltd.	Mineral exploration	Singapore	100%
DeepGreen Resources, LLC	Holding Company	USA	100%
Nauru Ocean Resources Inc.	Mineral exploration	Republic of Nauru	100%
Nauru Education and Training Foundation Inc. (“NEAT”)	Holding Company	Republic of Nauru	100%
Nauru Health and Environment Foundation Inc. (“NHEF”)	Holding Company	Republic of Nauru	100%
Tonga Offshore Mining Ltd.	Mineral exploration	Kingdom of Tonga	100%
Koloa Moana Resources Ltd.	Holding Company	Canada	100%
Offshore Minerals Pty. Ltd.	Mineral exploration	Australia	100%
DeepGreen TOML Singapore Pte. Ltd.	Mineral exploration	Singapore	100%
DeepGreen TOML Holding 1 Ltd.	Holding Company	British Virgin Islands	100%
DeepGreen TOML Holding 2 Ltd.	Holding Company	British Virgin Islands	100%
The Metals Company Australia Pty Ltd	Dormant	Australia	100%
TMC The Metals Company UK Limited	Dormant	United Kingdom	100%

All inter-group balances have been eliminated on consolidation.

3. Significant Accounting Policies

i. Foreign Currencies

The functional currency is the currency of the primary economic environment in which the entity operates. The functional currency of the Company and all its subsidiaries is the U.S. Dollar, except for NEAT and NHEF, whose functional currency is the Australian Dollar.

At the end of each reporting period, monetary assets and liabilities that are denominated in foreign currencies are translated into the functional currency at the rates prevailing at that date. Non-monetary assets and liabilities carried at fair value that are denominated in currencies other than the U.S. Dollar are translated at rates prevailing at the date when the fair value was determined. All gains and losses on translation of these foreign currency transactions are included in the statements of loss and comprehensive loss. Non-monetary items that are measured at historical cost in a foreign currency are not retranslated.

For consolidation purposes, the assets and liabilities of entities with functional currencies other than the US Dollar are translated at the period end rates of exchange, and the results of their operations are translated at average rates of exchange for the period. The resulting changes are recognized in accumulated other comprehensive loss within equity as currency translation differences.

ii. Use of Estimates

The preparation of financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts in the consolidated financial statements and the notes thereto. Significant estimates and assumptions reflected in these consolidated financial statements include, but are not limited to, accounting for the acquisition of TOML, the valuation of common share-based payments, including valuation of the incentive stock options (Note 16) and the common shares issued to Maersk (Notes 11 and 15), as well as the valuation of warrants liability (Note 14). Actual results could differ materially from those estimates.

iii. Loss Per Share

Basic loss per share is computed by dividing loss available to common shareholders by the weighted average number of common shares outstanding during the year. The computation of diluted loss per share assumes the conversion, exercise or contingent issuance of securities only when such conversion, exercise or issuance would have a dilutive effect on the loss per share. The dilutive effect of convertible securities is reflected in the diluted loss per share by application of the “if converted” method. The dilutive effect of outstanding options and their equivalents is reflected in the diluted loss per share by application of the treasury stock method.

iv. Financial Instruments

Financial assets and liabilities are recognized when the Company becomes a party to the contractual provisions of the instrument. Financial assets are derecognized when the rights to receive cash flows from the assets have expired, or have been transferred, and the Company has transferred substantially all risks and rewards of ownership. A financial liability is derecognized when the obligation specified in the contract is discharged, cancelled, or expires.

The Company’s financial instruments consists of cash and cash equivalents, receivables, accounts payable and accrued liabilities, and deferred acquisition costs which are recorded at amortized cost as well as warrants to acquire common shares of the Company which are measured at fair value.

v. Fair Value of Financial Instruments

Fair value estimates of financial instruments are made at a specific point in time, based on relevant information about financial markets and specific financial instruments. As these estimates are subjective in nature, involving uncertainties and matters of significant judgment, they cannot be determined with precision. Changes in assumptions can significantly affect estimated fair value.

The Company measures fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the reporting date. In accordance with U.S. GAAP, the Company utilizes a three-tier hierarchy, which prioritizes the inputs used in the valuation methodologies in measuring fair value:

- **Level 1** - Valuations based on quoted prices in active markets for identical assets or liabilities that an entity has the ability to access.
- **Level 2** - Valuations based on quoted prices for similar assets or liabilities, quoted prices for identical assets or liabilities in markets that are not active, or other inputs that are observable or can be corroborated by observable data for substantially the full term of the assets or liabilities.
- **Level 3** - Valuations based on inputs that are supported by little or no market activity and that are significant to the fair value of the assets or liabilities.

In some circumstances, the inputs used to measure fair value might be categorized within different levels of the fair value hierarchy. In those instances, the fair value measurement is categorized in its entirety in the fair value hierarchy based on the lowest level input that is significant to the fair value measurement.

There were no transfers between fair value measurement levels during the years ended December 31, 2021 and 2020.

As at December 31, 2021 and 2020, the carrying values of cash and cash equivalents, receivables, accounts payable and accrued expenses and deferred acquisition costs approximate their fair values due to the short-term nature of these instruments.

vi. Cash and Cash Equivalents

Cash and cash equivalents include cash on hand and term deposits with a remaining term to maturity at acquisition of three months or less. As at December 31, 2021 and 2020, the Company had no cash equivalents.

vii. Equipment

Equipment are stated at cost less accumulated depreciation and accumulated impairment losses. Cost includes expenditures that are directly attributable to the acquisition of the asset. Subsequent costs are included in the asset's carrying amount or recognized as a separate asset, as appropriate, when it is probable that future economic benefits from such assets will flow to the Company and the cost of such assets can be measured reliably. The carrying amount of an asset is derecognized when it is replaced or taken out of service. Repairs and maintenance costs are charged to the statement of loss and comprehensive loss during the period they are incurred.

The major categories of equipment are amortized on a declining balance basis as follows:

Exploration and other equipment	30 %
Office equipment	30 %

The Company allocates the amount initially recognized to each asset's significant components and depreciates each component separately. Amortization methods and useful life of the assets are reviewed at each financial period end and adjusted on a prospective basis, if required.

Gains and losses on disposals of equipment are determined by comparing the proceeds with the carrying amount of the asset and are included in the statement of loss and comprehensive loss.

viii. Leases

The Company determines if an arrangement is or contains a lease at inception. Operating leases are included in operating lease right-of-use ("ROU") assets and operating lease liabilities in the consolidated balance sheet. The Company does not have any finance leases.

ROU assets represent our right to use an underlying asset for the lease term and lease liabilities represent our obligation to make lease payments arising from the lease. Operating lease ROU assets and liabilities are recognized at commencement date based on the present value of lease payments over the lease term. When leases do not provide an implicit rate, the Company uses its incremental borrowing rate based on the estimated rate of interest for collateralized borrowing over a similar term of the lease payments at commencement date. The operating lease ROU asset also includes any lease payments made and excludes lease incentives. Lease expense for operating leases is recognized on a straight-line basis over the lease term. Differences between the calculated lease payment and actual payment are expensed as incurred. Amortization of finance lease assets is recognized over the lease term. Interest expense on finance lease liabilities is recognized over the lease term in interest expense. The lease terms may include options to extend or terminate the lease when it is reasonably certain that we will exercise that option.

The Company elected to apply the short-term lease recognition exemption to all of its lease arrangements and recorded an expense of \$132 (2020: \$117) for lease payments during the year ended December 31, 2021 relating to office premises and employee accommodations. Such lease expense is disclosed under general and administrative expenses within the statement of loss and comprehensive loss and forms part of cash flow from operating activities.

ix. Exploration Contracts

The Company is in the exploration stage with respect to its investment in exploration contracts and follows the practice of capitalizing costs related to the acquisition of such exploration contracts. The cost of exploration contracts will be charged to operations using a unit-of-production method based on proven and probable reserves once commercial production commences in the future.

x. Exploration and Evaluation Expenses

The Company expenses all costs related to exploration and development of exploration contracts. Such exploration and development costs include, but are not limited to, exploration contract management, geological, geochemical and geophysical studies, environmental studies and process development.

xi. Share-Based Compensation

Share-based compensation is measured at the grant date based on the fair value of the award and is recognized over the requisite service period. Share-based compensation costs are charged to exploration and evaluation expenses or general and administrative expenses in the statement of loss and comprehensive loss. The Company recognizes forfeiture of any awards as they occur. The Company records share-based compensation from the issuance of stock options and restricted share units (“RSUs”) to employees with service-based conditions using the accelerated attribution method.

For stock options issued with performance conditions (Note 16), the Company recognizes share-based compensation cost when the specific performance targets become probable of being achieved using the accelerated attribution method. When these costs relate to equity financing, they are netted against share capital as a share issuance cost. The fair value of stock option awards with only service and/or performance conditions is estimated on the grant date using a Black-Scholes option-pricing model.

For stock options issued with market conditions (Note 16), the Company recognizes share-based compensation cost over the expected achievement period for the related market capitalization milestone determined on the grant date. If the related market capitalization milestone is achieved earlier than its expected achievement period, then any unamortized share-based compensation cost for that milestone is recognized at that time. The fair value of market-based stock option awards is estimated on the grant date using Monte-Carlo simulations.

The Company at times grants common shares, stock options or RSUs in lieu of cash to certain vendors for their services to the Company. The Company recognizes the associated cost in the same period and manner as if the Company paid cash for the services provided.

xii. Warrants Liability

The Company evaluates all of its financial instruments, including issued share purchase warrants, to determine if such instruments are derivatives or contain features that qualify as embedded derivatives, pursuant to U.S. GAAP Accounting Standard Coding (“ASC”) 480, Distinguishing Liability from Equity, and ASC 815, Derivatives and Hedging. The classification of derivative instruments, including whether such instruments should be recorded as liabilities or as equity, is re-assessed at the end of each reporting period.

The Company accounts for the Public Warrants and Private Warrants (as defined below) in accordance with the guidance contained in ASC 815 (Subtopic 40), Derivative and Hedging – Contracts in Entity’s Own Equity (“ASC 815-40”), and the U.S. Securities and Exchange Commission (“SEC”) Division of Corporation Finance’s April 12, 2021 Public Statement, Staff Statement on Accounting and Reporting Considerations for Warrants Issued by Special Purpose Acquisition Companies (“SEC Statement”), under which, subsequent to the Business Combination, the 15,000,000 common share warrants issued by SOAC as part of the units offered in its initial public offering (“Public Warrants”) were determined to meet the criteria for equity classification, while the 9,500,000 private placement common share warrants issued by SOAC in a private placement simultaneously with the closing of the initial public offering (“Private Warrants”) did not meet the criteria for equity classification and must be recorded as liabilities. Specifically, the terms of the Private Warrants provide for potential changes to the settlement amounts dependent upon the characteristics of the warrant holder, and, because the holder of a Private Warrant is not an input into the pricing of a fixed-for-fixed option on equity shares, such provision would preclude the Private Warrants from being classified in equity and should be classified as a liability. Accordingly, the Company classified the Private Warrants as liabilities measured at fair value and adjusts the Private Warrants to their fair value at the end of each reporting period. The warrant liability is subject to re-measurement at each balance sheet date until exercised with any changes in fair value being recognized in the Company’s statement of loss and comprehensive loss.

xiii. Income Taxes

Income tax expense represents the sum of current tax expense and deferred tax expense.

Current tax expense is based on taxable profit for the year and includes any adjustments to tax payable in respect of previous years. Taxable profit differs from accounting profit or loss as reported in the consolidated income statement because it excludes (i) items of income or expense that are taxable or deductible in other years and (ii) items that are never taxable or deductible. The Company’s liability for current tax is calculated using tax rates that have been enacted by the balance sheet date.

The Company’s policy is to account for income tax related interest and penalties in income tax expense in the accompanying statements of loss and comprehensive loss.

Deferred tax income taxes are accounted for using the asset and liability method. Deferred income tax assets and liabilities are based on temporary differences, which are differences between the accounting basis and tax basis of assets and liabilities, non-capital loss, capital loss, and tax credits carryforwards and are measured using the enacted tax rates and laws expected to apply when these differences reverse. Deferred tax benefits, including non-capital loss, capital loss, and tax credits carryforwards are recognized to the extent that realization of such benefits is considered more likely than not. The effect on deferred tax assets and liabilities of a change in tax rates is recognized in the consolidated income statement in the period that enactment occurs. When realization of deferred income tax assets does not meet the more likely than not criterion for recognition, a valuation allowance is provided.

4. Significant Accounting Estimates and Judgements

The preparation of financial statements in accordance with U.S. GAAP requires management to make judgments, estimates and assumptions that affect the application of policies and reported amounts of assets and liabilities, income and expenses. The estimates and associated assumptions are based on historical experience and various other factors that are believed to be reasonable under the circumstances, the results of which form the basis of making the judgments about carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates.

Significant management judgments and estimates were applied to the following areas:

i. TOML Acquisition

In March 2020, the Company completed the TOML Acquisition (Note 7) and applied guidance from ASC 805, *Business Combinations*, to understand the accounting treatment regarding this acquisition and make necessary judgements.

ASC 805 defines a business as consisting of inputs and processes, which when the processes are applied to those inputs, have the ability to contribute to the creation of outputs. The key input acquired in connection with the TOML Acquisition is the TOML Exploration Contract (Note 7) and the related intellectual property. The TOML Exploration Contract is in the development stage and therefore does not produce outputs. ASC 805 requires that where there is no output, there must be both an input and substantive process which must include an organized workforce with the necessary skills, experience, and knowledge to develop and convert the inputs into outputs, for a group of assets to be considered a business. An organized workforce was not included in the TOML Acquisition and therefore the Company's management deemed that the TOML Acquisition was not a business acquisition and only an acquisition of a group of assets.

The Company's position is supported by ASC 805's guidance that if substantially all of the fair value of the gross assets acquired is concentrated in a single identifiable asset or a group of similar identifiable assets, the set is not considered a business. The value of the TOML Acquisition is considered to be primarily in the TOML Exploration Contract.

Management also determined that other assets acquired (which included other intangible assets such as patents and trademarks) were connected to the TOML Exploration Contract and would not hold value by themselves. The value of the total cost was therefore capitalized and reported as "Exploration contracts" on the Company's balance sheet.

ii. Valuation of Share-Based Payments

TMC recognized the cost of share-based awards granted to employees, non-employees and directors based on the estimated grant-date fair value of the awards. Prior to closing of the Business Combination, TMC determined the fair value of stock options using the Black-Scholes option pricing model, which was impacted by the following assumptions:

- Fair Value of Common Shares on the Date of the Grant — The Company estimated the value of its common shares using the Probability Weighted Expected Return Method ("PWERM"). The Company applied the PWERM by first defining the range of potential future liquidity outcomes, including the share price used for its most recent private placements and the share price used for the Business Combination, then allocating its value based on the probability of that event occurring.
- Expected Term—TMC used the term of the award when calculating the expected term due to insufficient historical exercise data.
- Expected Volatility—As TMC's shares were not actively traded prior to closing of the Business Combination, the volatility is based on a benchmark of comparable companies within the mining industry.
- Expected Dividend Yield—The dividend rate used is zero as TMC has never paid any cash dividends on common shares and does not anticipate doing so during the expected life of the stock options.
- Risk-Free Interest Rate—The interest rates used are based on the implied yield available on Canadian Treasury zero-coupon issues with an equivalent remaining term equal to the expected life of the award.

This valuation approach involves the use of estimates, judgments and assumptions that are subjective, such as those regarding the probability of future events. Changes in these estimates and assumptions impact the Company's valuation as of the valuation date and may have a material impact on the valuation of the Company's common shares. Changes in these assumptions used to determine the fair value of incentive stock options, including the vesting timeline of granted stock options, could have a material impact on the Company's loss and comprehensive loss.

Prior to closing of the Business Combination, TMC estimated the fair value of common shares issued for services using the PWERM described above.

iii. Valuation of Warrants Liability

The Company re-measures the fair value of the Private Warrants at the end of each reporting period. The fair value of the Private Warrants was estimated using a Black-Scholes option pricing model whereby the expected volatility was estimated using a binomial model based on consideration of the implied volatility from the Company's Public Warrants adjusted to account for the call feature of the Public Warrants at prices above \$18.00 during 20 trading days within any 30-trading day period.

5. Recent Accounting Pronouncements Issued and Adopted

i. Accounting for Debt with Conversion and Other Options

In August 2020, the Financial Accounting Standards Board (the “FASB”) issued Accounting Standards Update (“ASU”) 2020-06, “*Debt – Debt with Conversion and Other Options (Subtopic 470-20) and Derivative and Hedging – Contracts in Entity’s Own Equity (Subtopic 815-40)*”, which simplifies the accounting for convertible instruments by reducing the number of accounting models and requiring that a convertible instrument be accounted for as a single liability measured at amortized cost. Further, ASU 2020-08 amended the earnings per share guidance by requiring the diluted earnings per share calculation for convertible instruments to follow the if-converted method, with the use of the treasury stock method no longer permitted. The ASU 2020-08 is effective for fiscal periods ending on or after December 15, 2021, with early adoption permitted, but no earlier than fiscal years and interim periods within those fiscal years, beginning after December 15, 2020. The ASU 2020-08 allows either a modified retrospective method of transition or a fully retrospective method of transition, with any adjustments recognized as an adjustment to the opening balance of deficit. The Company adopted this standard on January 1, 2021. The standard did not have any impact on the Company’s historical financial statements but was applied to recognize the impact of the convertible debentures issued during February 2021 (Note 13).

6. Business Combination

On March 4, 2021, SOAC and DeepGreen entered into a business combination agreement (“BCA”) in which SOAC would combine with DeepGreen, relist on the Nasdaq and SOAC would be renamed to TMC. The Business Combination was consummated on September 9, 2021, whereby SOAC acquired all of the outstanding common shares of DeepGreen.

Pursuant to the BCA, shareholders of DeepGreen exchanged their DeepGreen common shares at a ratio of 1.157862 TMC common shares per DeepGreen common share (“Exchange Ratio”) and received approximately 203.9 million TMC common shares and a total of 120.1 million Class A to H special shares (“Special Shares”). Each class of Special Shares automatically convert to TMC common shares if TMC common shares trade at a price on any 20 trading days within any 30- trading day period that is greater than or equal to the specific trigger price for the respective class of Special Share. The trigger prices range from \$15 per share to \$200 per share.

In connection with the Business Combination, the SOAC sponsors were entitled to an additional 0.5 million Class I Special Shares and 0.7 million Class J Special Shares which are convertible to TMC common shares if TMC common shares trade for a price on any 20 trading days within any 30-trading day period that is greater than or equal to \$50.00 per share and \$12.00 per share, respectively.

Additionally, existing DeepGreen options were automatically adopted by TMC (the “Rollover Options”) after application of the Exchange Ratio to both the underlying number of common shares and the exercise price. These Rollover Options did not change in value as a result of the Business Combination. The Rollover Options also entitle holders thereof to a pro-rata portion of up to an aggregate of 14.9 million Special Shares if exercised.

Lastly, the warrants granted to Allseas to acquire 10 million DeepGreen common shares at a nominal value (the “Allseas Warrants”) have been assumed by TMC and have become warrants to purchase 11.6 million TMC common shares, in accordance with its terms.

Below is a summary of the Special Shares and their respective vesting thresholds, assuming the full amount of Special Shares from Rollover Options are issued:

Special Share Class	A	B	C	D	E	F	G	H	I	J
Share Trigger price (\$)	15	25	35	50	75	100	150	200	50	12
Special Shares (million)	5	10	10	20	20	20	25	25	0.5	0.7

The following table reconciles the cash proceeds from the Business Combination:

Cash proceeds from SOAC	\$ 27,328
Cash proceeds from sale of equity securities	110,300
Gross cash received by TMC from Business Combination	<u>137,628</u>
Less: Transaction costs settled in cash	(33,163)
Net contributions from Business Combination	<u>\$ 104,465</u>

In addition to the transaction costs settled in cash above, the Company incurred \$3.5 million of transaction costs which were settled by issuance of 873,953 common shares on October 7, 2021.

Prior to the Business Combination, SOAC had 30.0 million shares of Class A common shares with a par value of \$0.0001 per share (“SOAC Class A Shares”) outstanding and 7.5 million shares of Class B common shares with a par value of \$0.0001 per share (“SOAC Class B Shares”) held by Sustainable Opportunities Holdings LLC (the “Sponsor”).

In connection with the Business Combination, 27.3 million SOAC Class A Shares were redeemed by public shareholders. On September 9, 2021, each remaining issued and outstanding share of SOAC Class A Shares automatically converted, on a one-for-one basis, into TMC common shares and 6.8 million outstanding shares of SOAC Class B Shares automatically converted, on a one-for-one basis, into TMC common shares and 0.7 million outstanding shares of SOAC Class B Shares converted into Class J Special Shares. The TMC common shares also changed from having a par value of \$0.0001 per share to no par value.

The number of TMC common shares issued immediately following the consummation of the Business Combination is summarized as follows:

Shares by type	Number of shares
SOAC Class A shares outstanding prior to the Business Combination	30,000,000
Less: Redemption of SOAC Class A shares	(27,278,657)
SOAC Class A shares outstanding and converted to TMC common shares	<u>2,721,343</u>
Shares issued in the Private Investment in Public Equity (“PIPE”)	11,030,000
Conversion of SOAC Class B shares to TMC common shares	<u>6,759,000</u>
Shares issued to SOAC and PIPE investors	20,510,343
Shares issued to the DeepGreen shareholders	<u>203,874,981</u>
Total TMC common shares outstanding at close of Business Combination	<u>224,385,324</u>

The Company incurred transaction costs related to the Business Combination of approximately \$42.1 million, of which \$5.4 million, incurred prior to the closing of the Business Combination becoming probable, are included in general and administrative expenses on the consolidated statements of loss and other comprehensive loss. The remaining \$36.7 million of transaction costs were capitalized to common shares on the consolidated balance sheet.

The Business Combination was accounted for as a reverse acquisition with no goodwill or intangible assets being recorded. As SOAC had no operations, the net assets acquired were recorded at their historical cost. Adjustments related to the Business Combination including consideration paid to DeepGreen shareholders and any other adjustments to eliminate the historical equity of SOAC and recapitalize the equity of DeepGreen were recorded to common shares to reflect the effective issuance of common shares to SOAC and PIPE investors in the Business Combination.

7. TOML Acquisition

On March 31, 2020, the Company entered into an acquisition agreement to wholly acquire TOML and other entities in the group (the “TOML Group”) from Deep Sea Mining Finance Ltd. (“DSMF”) (the “TOML Acquisition”). Total purchase price of the TOML Acquisition, before transaction costs, was \$32.0 million. TOML holds an ISA exploration contract in the CCZ (“TOML Exploration Contract”) and some exploration related equipment. The TOML Group also holds various patents and an application right with respect to a prospecting exploration contract in Kiribati.

The purchase price of \$32.0 million was settled through initial cash payments in two tranches of \$0.25 million each (paid on March 31, 2020 and May 31, 2020, respectively), issuance of 9,005,595 common shares, \$0.1 million payment to the ISA on behalf of DSMF and deferred consideration of \$3.4 million which was originally to be paid on January 31, 2021. The common share consideration paid by the Company was valued at \$3.11 per common share, based on the private placements completed by DeepGreen around the time of the TOML Acquisition, for a total of \$28.0 million.

The Company had the option of settling the deferred consideration in either cash or common shares of the Company at its sole discretion. In January 2021, the arrangement with DSMF was amended to pay the entire deferred consideration with cash. The deferred consideration was fully settled on June 30, 2021.

The Company determined that the value of the TOML Acquisition was substantially concentrated in the TOML Exploration Contract and therefore considered this to be an acquisition of a group of connected assets rather than an acquisition of a business. Consequently, the total cost of the transaction was primarily allocated to exploration contracts.

The net assets acquired as part of the TOML Acquisition were as follows:

Net assets acquired	
Cash payments	\$ 560
Common shares issued (9,005,595 common shares @ \$3.11)	28,000
Transaction costs paid	47
Deferred acquisition costs	3,440
Total acquisition cost	\$ 32,047
Allocated to:	
Equipment	21
Exploration contracts (Note 11)	42,701
Deferred tax liability ¹	(10,675)
Net assets acquired	\$ 32,047

1. A deferred tax liability was recognized by the Company on the acquisition which related to differences between the book value and the tax basis of the TOML exploration contract.

8. Financial Instruments

Categories of Financial Instruments

	December 31 2021	December 31 2020
Financial assets		
Amortized cost		
Cash	\$ 84,873	\$ 10,096
Receivables	—	38
	\$ 84,873	\$ 10,134
Financial liabilities		
Amortized cost		
Accounts payable and accrued liabilities	\$ 26,573	\$ 4,316
Deferred acquisition costs	—	3,440
Fair value through profit or loss - Warrants liability	3,126	—
	\$ 29,699	\$ 7,756

9. Receivables and Prepayments

	December 31 2021	December 31 2020
Taxes and other receivables	\$ 64	\$ 56
Prepayments	3,622	73
	<u>\$ 3,686</u>	<u>\$ 129</u>

10. Equipment

The movements in the Company's capital equipment are as follows:

Cost	Exploration and other equipment	Office equipment	Total
December 31, 2019	\$ 2,219	\$ 21	\$ 2,240
TOML Acquisition (Note 7)	21	—	21
December 31, 2020	2,240	21	2,261
Additions	560	—	560
December 31, 2021	\$ 2,800	\$ 21	\$ 2,821
Accumulated depreciation			
December 31, 2019	\$ (371)	\$ (17)	\$ (388)
Amortization for the year	(562)	(1)	(563)
December 31, 2020	(933)	(18)	(951)
Amortization for the year	(453)	(1)	(454)
December 31, 2021	\$ (1,386)	\$ (19)	\$ (1,405)
Net book value			
As at December 31, 2020	\$ 1,307	\$ 3	\$ 1,310
As at December 31, 2021	\$ 1,414	\$ 2	\$ 1,416

11. Exploration Contracts

Significant Exploration Agreements

NORI Exploration Contract:

The Company's wholly-owned subsidiary, NORI, was granted the NORI Exploration Contract on July 22, 2011 under the sponsorship of Nauru. The contract application fee of \$0.3 million, provides NORI with exclusive rights to explore for polymetallic nodules in the NORI Area for an initial term of 15 years (renewable for successive five-year periods) subject to complying with the exploration contract terms (Note 19) and provides NORI with the priority right to apply for an exploitation contract to collect polymetallic nodules in the same area.

NORI has a right to renounce, without penalty, in whole or part of its rights in the NORI Area at any time and therefore does not have a fixed commitment with relation to the NORI Exploration Contract (Note 19).

Marawa Agreements:

Marawa executed the Marawa Exploration Contract with the ISA on January 19, 2015. The Marawa Exploration Contract provides Marawa with exclusive rights to explore for polymetallic nodules in the Marawa Area for an initial term of 15 years (subject to renewal for successive five-year periods) subject to complying with the exploration contract terms and the priority right to apply for an exploitation contract to collect polymetallic nodules in the same area.

On March 17, 2012, the Company's wholly-owned subsidiary, DeepGreen Engineering Pte. Ltd. ("DGE"), entered into an Option Agreement ("Marawa Option Agreement") with Marawa and Kiribati. Under the amended Marawa Option Agreement dated October 1, 2013, DGE paid an option fee of \$0.3 million to acquire the right to purchase tenements, as may be granted to Marawa by the ISA or any other regulatory body, for the greater of \$0.3 million or the value of any amounts owing to DGE by Marawa. The exercise period for the option is a maximum of 40 years after the date of the execution of the amended Marawa Option Agreement.

On October 1, 2013, DGE also entered into a services agreement ("Marawa Services Agreement") with Marawa and Kiribati, which grants DGE the exclusive right to carry out all exploration and collection in the Marawa Area. Under the Marawa Services Agreement, DGE will pay to the ISA, on behalf of Marawa, the following: \$47 thousand annual exploration fees, ISA royalties and taxes, and the ISA exploitation application fee of \$0.3 million. In addition, DGE will ensure that the activities carried out in the Marawa Area by DGE and any other service contractor complies with the ISA regulations and any other required regulations.

The Marawa Services Agreement grants DGE the right to recover any and all polymetallic nodules from the Marawa Area by paying Kiribati a royalty per wet tonne of polymetallic nodules collected (adjusted for inflation from October 1, 2013 onwards).

DGE has the right to terminate the Marawa Services Agreement at its sole discretion by giving written notice to Marawa and Kiribati, and such termination shall take effect two months following the date of the termination notice, provided that DGE shall pay to the ISA on behalf of Marawa the fees or payments legally owed to the ISA by Marawa (including the annual ISA exploration fee and ISA royalties and taxes) that are outstanding at the date of termination or that are incurred within 12 months after the date of such termination. There are no other longer-term commitments with respect to the Marawa Option Agreement and the Marawa Services Agreement.

As at December 31, 2021, Marawa had no amounts owing to DGE under the Marawa Services Agreement and no purchase tenements had been granted to Marawa.

TOML Exploration Contract:

TOML was granted the TOML Exploration Contract on January 11, 2012 under the sponsorship of Tonga. The TOML Exploration Contract provides TOML with exclusive rights to explore for polymetallic nodules in the TOML Area for an initial term of 15 years (renewable for successive five-year periods) subject to complying with the exploration contract terms and a priority right to apply for an exploitation contract to collect polymetallic nodules in the same area.

Strategic Partnerships

Marine Vessel Services:

Effective March 15, 2017, the Company entered into a strategic partnership with Maersk to undertake the exploration, environmental baseline and offshore testing required to support development of pre-feasibility studies for economic production of polymetallic nodules from the CCZ (the "Participation Agreement"). Under the Participation Agreement, Maersk provided marine vessel services and project management services, which enabled TMC to undertake the various offshore campaigns to support required pre-feasibility studies. During these offshore campaigns, TMC undertook baseline studies required to complete an Environmental and Social Impact Assessment ("ESIA"), collected nodules for metallurgical test work and collected samples and survey data for resource evaluation. Prior to February 5, 2021, the costs related to the marine vessel use were settled through the issuance of DeepGreen common shares, the number of which was based on a contractual price of \$1.08 per common share. Project management services provided by Maersk for managing these offshore campaigns are paid in cash.

On March 3, 2021, the Participation Agreement with Maersk was amended whereby all costs incurred on or after February 5, 2021 pertaining to the use of the marine vessel would be paid in cash rather than through issuance of common shares. By this amendment, Maersk irrevocably waived certain pro rata participation rights that it may have had under the Participation Agreement in connection with the Business Combination and acknowledged that all amounts owing to Maersk for services rendered through February 5, 2021 in the aggregate amount of \$4.6 million had been satisfied by the issuance of 4.2 million common shares.

During the year ended December 31, 2021, the Company incurred costs to Maersk for offshore campaigns of \$33.9 million (2020: \$25.6 million). These costs were settled with the issuance of 4.2 million TMC common shares to Maersk at \$6.05 per common share (2020: 4.7 million TMC common shares at \$3.11 per common share), with the balance of \$21.3 million (2020: \$4.4 million) settled or to be settled in cash. As at December 31, 2021, TMC had outstanding payables to Maersk of \$11.3 million (2020: \$1.8 million) included in accounts payable and accrued liabilities. Subsequent to December 31, 2021, \$3.5 million of the \$11.3 million was settled in cash.

The agreement with Maersk ended in January 2022, following the completion of the NORI Area D baseline campaigns.

As at December 31, 2021, Maersk owned 20.8 million TMC common shares (2020: 16.6 million TMC common shares) which constituted 9.2% (2020: 8.8%) of the total common shares outstanding of the Company.

Strategic Alliance with Allseas Pilot Mining Test Project

On March 29, 2019, the Company and Allseas entered into a Strategic Alliance Agreement (“SAA”) with the objective to develop and operate commercial nodule collection systems in the Company’s contract areas. The SAA included the intent to develop and deploy a Pilot Mining Test System (“PMTS”), the successful completion of which would support the Company’s application for an exploitation contract with the ISA. Allseas committed to a fixed price development contract and would own all intellectual property used and generated in the development of the PMTS. Upon successful completion of the pilot trial of the PMTS in NORI Area D, the Company and Allseas agreed to enter into a nodule collection and shipping agreement whereby Allseas would provide commercial services for the collection of the first 200 million metric tonnes of polymetallic nodules on a cost plus 50% profit basis. Under the terms of the SAA, Allseas subscribed for and ultimately received 7.7 million common shares for a total of \$20.0 million paid in cash to the Company.

On July 8, 2019, as contemplated by the SAA, the Company and Allseas entered into the Pilot Mining Test Agreement (“PMTA”) which governs the terms, design specifications, procedures, and timetable under which Allseas agreed to complete a pilot trial of the PMTS in NORI Area D. Under the PMTA, in exchange for Allseas’ development efforts, upon successful delivery of the pilot trial of the PMTS in NORI Area D by Allseas, the Company agreed to pay Allseas: (a) \$30.0 million in cash and (b) issue 11.6 million common shares.

Contract Amendments

On February 20, 2020, the PMTA was amended to recognize the acquisition by Allseas of the *Hidden Gem*, a former drillship to be converted into a surface production vessel that would first be used as part of the PMTS, and later as part of the commercial production system. The Company paid an additional: (a) \$10.0 million in cash and (b) \$10.0 million by issuing 3.2 million common shares valued at \$3.11 per share.

On March 4, 2021 and June 30, 2021, the Company and Allseas further amended the PMTA whereby, instead of issuing 11.6 million common shares upon successful delivery of the pilot trial of the PMTS in NORI Area D, the Company issued the Allseas Warrants (Note 14).

The amendment on March 4, 2021 stipulated that if the market price of the Company’s common shares on June 1, 2022 is higher than \$12.95 per common share, the aggregate value of the common shares underlying the Allseas Warrants above \$150 million as at June 1, 2022 will automatically become a commercial credit from Allseas to the Company equal to the excess value. This commercial credit will be effective on the vesting date of the Allseas Warrants and the Company will be able to exchange this excess value for any future goods and services from Allseas under the nodule collection and shipping contract for one year after commercial production. There can be no assurance that such future goods and services from Allseas will occur.

The 2021 contract amendments also restructured the original \$30.0 million lump sum cash payment upon successful delivery of the PMTS to:

- \$10 million within 10 business days of the closing of the Business Combination and Allseas providing confirmation of placing an order for certain equipment and demonstrating certain progress on construction of the PMTS;
- \$10 million on the later of (i) January 1, 2022, and (ii) confirmation of successful completion of the North Sea drive test; and

- \$10 million upon successful completion of the pilot trial of the PMTS in NORI Area D.

On October 5, 2021, the first \$10 million payment was paid to Allseas for successfully reaching the first progress milestone, with the completion of the Business Combination and by confirming the order of certain equipment and demonstrating certain progress on construction of the PMTS.

The Company accounts for the first two milestone payments in accordance with ASC 730, *Research and Development*, as these payments represented progress payments. Accordingly, the Company expenses the payments according to when the services are performed. The research and development related services commenced in July 2019 and are expected to be performed through January 2023. Therefore, the Company records the expense on a straight-line basis over the life of the contract which resulted in total expenses of \$14.3 million recorded as exploration and evaluation expenses for the year ended December 31, 2021. The Company will record the expense and liability for the third milestone payment upon successful completion of the pilot trial of the PMTS in the NORI Area D. The Company has not recorded a liability for the third payment as at December 31, 2021.

As at December 31, 2021, Allseas owned 16.2 million TMC common shares (2020: 14.2 million TMC common shares) which constituted 7.2% (2020: 7.5%) of total common shares outstanding. The Allseas total share ownership includes 3.2 million shares issued in a private placement in June 2020.

Reconciliation – Exploration Contracts

A reconciliation of the Company's exploration contracts is as follows:

	NORI Contract	Marawa Option Agreement	TOML Contract	Total
December 31, 2019	\$ 250	\$ 199	\$ —	\$ 449
TOML Acquisition (<i>Note 7</i>)	—	—	42,701	42,701
December 31, 2020	\$ 250	\$ 199	\$ 42,701	\$ 43,150
December 31, 2021	\$ 250	\$ 199	\$ 42,701	\$ 43,150

Exploration and Evaluation Expenses

The detail of exploration and evaluation expenses is as follows:

For the year ended December 31, 2021	General	NORI Exploration Contract	Marawa Option Agreement	TOML Exploration Contract	Total
Exploration labor	\$ —	\$ 2,769	\$ 606	\$ 672	\$ 4,047
Offshore campaigns	—	38,956	33	43	39,032
Share-based compensation (<i>Note 16</i>)	—	17,116	4,401	5,453	26,970

Travel expenses	341	133
Other expenses	50	—
General and Administration Expenses	\$ 56,583	\$ 7,723

13. Convertible Debentures

In February 2021, the Company issued a total of \$26 million in convertible debentures. The convertible debentures had an interest rate of 7.0% per annum, compounded annually, and had a maturity date of 24 months from the date of issuance.

The debentures were convertible into shares of the Company at anytime at the conversion price of \$8.64 per common share. Unless any accrued interest was converted prior to the maturity date, all accrued and unpaid interest was payable at the maturity date in TMC common shares at a conversion price of \$8.64 per common share.

The terms of the convertible debentures provided that in the event that the Company completed the Business Combination (Note 6) or another change of control transaction at any time prior to the maturity date, the debenture value would be automatically converted into common shares at the conversion price immediately prior to the Business Combination or the change of control transaction. If the debentures, or any portion thereof, were not converted by the holder upon the earlier of the maturity date or the completion of the Business Combination or the change of control transaction, the outstanding debenture value would automatically convert into common shares at the conversion price of \$8.64 per common share.

On February 18, 2021, convertible debentures with a principal amount of \$0.5 million were converted into 57,894 common shares of the Company.

On September 9, 2021, the Company issued 3,068,673 common shares upon conversion of the outstanding debentures consisting of \$25.5 million and \$1.0 million of principal and accrued interest, respectively.

14. Warrants

For accounting purposes, the Company was considered to have issued the Public Warrants and Private Warrants as part of the Business Combination (Note 6).

Public Warrants

Each whole Public Warrant entitles the holder to purchase one TMC common share at a price of \$11.50 per share beginning on October 9, 2021. As at December 31, 2021, 15,000,000 Public Warrants were outstanding. Public Warrants may only be exercised for a whole number of shares. No fractional Public Warrants will be issued upon separation of the units and only whole Public Warrants will trade. The Public Warrants will expire on September 9, 2026 or earlier upon redemption or liquidation. Public Warrant holders do not have the rights or privileges of holders of common shares nor any voting rights until they exercise their warrants and receive common shares.

The Company will not be obligated to deliver any common shares pursuant to the exercise of a Public Warrant and will have no obligation to settle such warrant exercise unless a registration statement under the Securities Act of 1933, as amended (“Securities Act”) with respect to the common shares underlying the Public Warrants is then effective and a prospectus relating thereto is current, subject to the Company satisfying its obligations with respect to registration, or a valid exemption from registration is available. No Public Warrants will be exercisable and the Company will not be obligated to issue a common share upon exercise of a Public Warrant unless the common share issuable upon such warrant exercise has been registered, qualified or deemed to be exempt under the securities laws of the state of residence of the registered holder of the warrants. In the event that the conditions in the two immediately preceding sentences are not satisfied with respect to a Public Warrant, the holder of such warrant will not be entitled to exercise such warrant and such warrant may have no value and expire worthless. In no event will the Company be required to net cash settle any Public Warrants. In the event that a registration statement is not effective for the exercised Public Warrants, the purchaser of a unit containing such warrant will have paid the full purchase price for the unit solely for the common share underlying such unit. On October 7, 2021, the Company filed a Registration Statement on Form S-1 with respect to the common shares underlying the Public Warrants, as well as the Private Warrants, which was declared effective by the SEC on October 22, 2021.

The Company is required to file a post-effective amendment to this Registration Statement on Form S-1, which will need to be declared effective by the SEC, following the Company’s filing of its Annual Report on Form 10-K for the year ended December 31, 2021 in which these Notes to the Consolidated Financial Statements are included to update the information and financial statements included therein.

The Company may call the Public Warrants for redemption:

- in whole and not in part;
- at a price of \$0.01 per warrant;
- upon a minimum of 30 days’ prior written notice of redemption; and
- if, and only if, the closing price of the common shares equals or exceeds \$18.00 per share (as adjusted for share subdivisions, share capitalizations, reorganizations, recapitalizations and the like) for any 20 trading days within a 30-day trading period ending on the third trading day prior to the date on which the Company sends the notice of redemption to the warrant holders.

If the Company calls the Public Warrants for redemption in certain circumstances, management will have the option to require all holders that wish to exercise the Public Warrants to do so on a cashless basis, by surrendering the Public Warrants for a number of common shares per warrant equal to the lesser of:

- the quotient obtained by dividing (x) the product of the number of common shares underlying such warrant, multiplied by the excess of the average reported closing price of common shares for the ten trading days ending on the third trading day prior to the date on which the notice of redemption is sent to the holders (“Fair Market Value”) over the warrant price by (y) the Fair Market Value, and
- 0.365.

As at December 31, 2021, the value of outstanding Public Warrants of \$19.5 million was recorded in additional paid in capital.

Private Warrants

As at December 31, 2021, 9,500,000 Private Warrants were outstanding. The Private Warrants (including the common shares issuable upon exercise of the Private Warrants) were not transferable, assignable or salable until October 9, 2021, except to permitted transferees. The Private Warrants are identical to the Public Warrants, except that so long as they are held by the Sponsor or any of its permitted transferees:

- (i) the Private Warrants are exercisable for cash or on a cashless basis, at the holder’s option, and
- (ii) the Private Warrants are not redeemable by the Company.

The Private Warrants are subject to the Company’s redemption option at the price of \$0.01 per warrant, if not held by the Sponsor or any of its permitted transferees, provided that the other conditions of such redemption are met, as described above. If holders of the Private Warrants elect to exercise the warrants on a cashless basis, the holder would pay the exercise price by surrendering their Private Warrants for a number of common shares equal to:

- the quotient obtained by dividing (x) the product of the number of common shares underlying the warrants, multiplied by the excess of the average reported closing price of the common shares for the ten trading days ending on the third trading day prior to the date on which the notice of warrant exercise is sent to the warrant agent (“fair market value”) over the exercise price of the warrants by (y) the fair market value.

If the Private Warrants are held by a holder other than the Sponsor or any of its permitted transferees, the Private Warrants are redeemable by the Company in all redemption scenarios applicable to the Public Warrants and exercisable by such holders on the same basis as the Public Warrants. In December 2021, the Private Warrants were transferred to permitted transferees.

The Company evaluated the Private Warrants under ASC 815-40, in conjunction with the SEC Statement, and concluded that they do not meet the criteria to be classified in shareholders’ equity. Specifically, the terms of the warrants provide for potential changes to the settlement amounts dependent upon the characteristics of the warrant holder, and, because the holder of a warrant is not an input into the pricing of a fixed-for-fixed option on equity shares, such provision would preclude the warrant from being classified in equity and thus the warrants should be classified as a liability.

The Private Warrants were valued using a Black-Scholes model, which resulted in a Level 3 fair value measurement. The primary unobservable input utilized in determining the fair value of the Private Warrants was the expected volatility of the Company’s common shares. The expected volatility was estimated using a binomial model based on consideration of the implied volatility from the Company’s Public Warrants adjusted to account for the call feature of the Public Warrants at prices above \$18.00 during 20 trading days within any 30-trading day period.

As at December 31, 2021, the fair value of outstanding Private Warrants of \$3.1 million is recorded as warrants liability. The following table presents the changes in the fair value of warrants liability:

	Private Warrants
Warrants liability as at September 9, 2021	\$ 12,501
Reduction in fair value of warrants liability	(9,375)
Warrants liability as at December 31, 2021	\$ 3,126

As at December 31, 2021, the fair value of the Private Warrants was estimated using the following assumptions:

	December 31, 2021	September 9, 2021
Exercise price	\$ 11.50	\$ 11.50
Share price	\$ 2.08	\$ 10.62
Volatility	64.6 %	15.8 %
Term	4.7 years	5.0 years
Risk-free rate	1.2 %	0.8 %
Dividend yield	0.0 %	0.0 %

There were no exercises or redemptions of the Public Warrants or Private Warrants during the year ended December 31, 2021.

Allseas Warrants

The Allseas Warrants will vest and become exercisable upon successful completion of the PMTS and will expire on September 30, 2026. A maximum of 11.6 million warrants to purchase common shares will vest if the PMTS is completed by September 30, 2023, gradually decreasing to 5.8 million warrants to purchase common shares if the PMTS is completed after September 30, 2025. Since the Allseas Warrants vest upon the achievement of a performance condition, being the completion of the PMTS, under U.S. GAAP, the vesting of the Allseas Warrants was not determined to be probable as at December 31, 2021. No expense or liability has been recorded as at and for the year ended December 31, 2021.

15. Common Shares

Authorized and Issued

As at December 31, 2021, the authorized, issued and outstanding common shares and Special Shares of the Company are as follows:

	Authorized	Issued and Outstanding
Common shares	Unlimited, with no par value	225,432,493
Class A Special Shares	5,000,000, with no par value	4,448,259
Class B Special Shares	10,000,000, with no par value	8,896,399
Class C Special Shares	10,000,000, with no par value	8,896,399
Class D Special Shares	20,000,000, with no par value	17,792,922
Class E Special Shares	20,000,000, with no par value	17,792,922
Class F Special Shares	20,000,000, with no par value	17,792,922
Class G Special Shares	25,000,000, with no par value	22,241,179
Class H Special Shares	25,000,000, with no par value	22,241,179
Class I Special Shares	500,000, with no par value	500,000
Class J Special Shares	741,000, with no par value	741,000

The holders of the Company's common shares are entitled to one vote for each common share held.

Each class of Special Shares do not have voting rights and do not participate in earnings. The Special Shares automatically convert to TMC common shares if TMC common shares trade at a price on any 20 trading days within any 30-trading day period that is greater than or equal to the specific trigger price for the respective class of Special Share. The trigger prices range from \$15 per share to \$200 per share (refer to Note 6 for details). As the Special Shares meet the indexation and equity classification criteria under ASC 815-40, the Special Shares have been classified as equity instruments at issuance.

As at December 31, 2020, the Company had 509,459 DeepGreen Class B Preferred Shares outstanding. Class B Preferred Shares were non-dividend earning and include voting rights similar to common shares. However, if any dividend was declared on common shares, the Company was required to concurrently declare and pay dividend on Class B Preferred Shares in the amount per share equal to the dividend per share paid on the common shares. These Class B Preferred Shares rank ahead of common shares in the event of liquidation. As at December 31, 2021, all Class B Preferred Shares have been converted to common shares.

Common Share Continuity

In accordance with ASC 805, under a reverse recapitalization, the equity structure reflects the equity structure of SOAC, as the legal acquirer, including the equity interests SOAC issued to affect the Business Combination. Accordingly, the Company has restated its equity structure using the Exchange Ratio of the Business Combination to reflect the number of shares of SOAC issued in the reverse acquisition. The share amounts stated below have been recast from the historical share totals of DeepGreen to reflect the Exchange Ratio.

Common shares	Number	Amount
December 31, 2019	163,331,904	\$ 79,824
Private placement	6,553,409	20,376
Financing cost incurred – Cash	—	(28)
Financing cost incurred - Stock option-based payments	—	(397)
Issued for TOML Acquisition (<i>Note 7</i>)	9,005,595	28,000
Issued for services (<i>Note 11</i>)	7,997,496	24,866
Exercise of stock options	2,605,189	1,790
December 31, 2020	189,493,593	\$ 154,431
Issued for services (<i>Note 11</i>)	4,432,606	26,960
Exercise of stock options	6,312,756	14,297
Conversion of restricted share units (<i>Note 16</i>)	173,216	399
Conversion of preferred shares to common shares	509,459	550
Issued in Business Combination (<i>Note 6</i>)	21,384,296	72,411
Conversion of debentures (<i>Note 13</i>)	3,126,567	27,003
December 31, 2021	225,432,493	\$ 296,051

16. Share-Based Compensation

The Company's 2021 Incentive Equity Plan (the "Plan") provides that the aggregate number of common shares reserved for future issuance under the Plan is 24,682,386 common shares, provided that 2,243,853 of the outstanding common shares shall only be available for awards made to non-employee directors of the Company. On the first day of each fiscal year beginning in 2022 to the tenth anniversary of the closing of the Business Combination, the number of common shares that may be issued pursuant to the Plan is automatically increased by an amount equal to the lesser of 4% of the number of outstanding common shares or an amount determined by the Board of Directors.

Stock options

Pursuant to the Company's stock option plan, directors may, from time to time, authorize the issuance of stock options to directors, officers, employees, and consultants of the Company and its subsidiaries. The Board of Directors grants such options with vesting periods and exercise prices determined at its sole discretion. As described in Note 6, existing DeepGreen options were automatically adopted by TMC after application of the Exchange Ratio to both the underlying number of common shares and the exercise price and provided for additional Special Shares to be issued to option holders on a pro-rata basis, if exercised. The Rollover Options did not change in value as a result of the Business Combination. Comparative information below has been restated by adjusting for the number of options and exercise prices for the Exchange Ratio.

As at December 31, 2021, there were 15,503,748 stock options outstanding under the Company's Short-Term Incentive Plan ("STIP") and 9,783,922 stock options outstanding under the Company's Long-Term Incentive Plan ("LTIP"). The Company grants awards under the STIP and LTIP under its equity incentive plans in effect at the time of the award. The stock options currently outstanding were granted under DeepGreen's equity incentive plan. No new stock options have been granted under the Company's Plan.

A continuity schedule of the Company’s stock options in the Company’s STIP is as follows:

	Number of Options Outstanding	Weighted average exercise price per option	Aggregate intrinsic value of stock options	Weighted average contractual life (years)
Outstanding – December 31, 2019	19,656,145	\$ 0.60	\$ 49,231	7.28
Granted	1,610,776	2.00		
Expired	(115,786)	0.30		
Cancelled/Forfeited	(2,995,968)	0.65		
Exercised	(2,605,190)	0.35		
Outstanding – December 31, 2020	15,549,977	\$ 0.80	\$ 36,126	7.34
Granted	6,373,203	2.10		
Expired	(50,946)	0.39		
Cancelled/Forfeited	(57,893)	0.65		
Exercised	(6,310,593)	0.67		
Outstanding – December 31, 2021	15,503,748	\$ 1.40	\$ 17,415	6.33
Vested and expected to vest – December 31, 2021	15,503,748	\$ 1.40	\$ 17,415	6.33
Vested and exercisable – December 31, 2021	14,175,425	\$ 0.94	\$ 17,406	6.32

A summary of the Company’s stock options granted and outstanding under the Company’s STIP as at December 31, 2021 is as follows:

Expiry Date	Exercise price	Weighted average life to expiry (years)	Number of Options Outstanding	Number of Options Exercisable
March 5, 2022	\$ 0.65	0.18	634,541	634,541
March 5, 2023	\$ 2.59	1.18	405,251	270,167
March 31, 2024	\$ 0.65	2.25	73,811	73,811
March 5, 2025	\$ 8.64	3.18	405,251	—
December 31, 2025	\$ 0.65	4.00	11,578	11,578
February 2, 2026	\$ 0.65	4.09	57,893	57,893
February 17, 2026	\$ 0.22 - \$0.52	4.13	448,861	448,861
June 1, 2028	\$ 0.65 - \$8.64	6.42	12,192,914	11,404,926
June 30, 2028	\$ 2.59	6.50	1,273,648	1,273,648
			15,503,748	14,175,425

The total grant date fair value of STIP stock options that vested during the year ended December 31, 2021, was \$30.7 million. As at December 31, 2021, total unrecognized share-based compensation expense of \$2.7 million is expected to be recognized over a weighted-average recognition period of approximately one year.

During the year ended December 31, 2021, the Company granted 9,783,922 stock options under its LTIP. These stock options have an exercise price of \$0.65 per option and expire on June 1, 2028. The aggregate intrinsic value of LTIP stock options as at December 31, 2021 was \$14.0 million. None of the LTIP stock options were exercisable on December 31, 2021. The Company expects LTIP options to vest as and when the market and performance milestones described below are achieved. As at December 31, 2021, total unrecognized share-based compensation expense for the LTIP stock options was \$30.1 million.

As at December 31, 2021, the fair value of the Company's common shares was \$2.08 per share. As at December 31, 2021, the Company used the closing market price of its common shares to determine the intrinsic value of outstanding stock options. Prior to closing of the Business Combination on September 9, 2021, there was no quoted market price for the Company's common shares. Accordingly, the Company estimated the fair value of common shares based on the PWERM by first defining the range of potential future liquidity outcomes, including the share price used for its most recent private placements and the share price used for the Business Combination, then allocating its value based on the probability of that event occurring. The approach involves estimates, judgments and assumptions that are highly complex and subjective. Changes in any or all of these estimates and assumptions, or the relationships between these assumptions, impact the Company's valuation of its common shares as of each valuation date which may have a material impact on the valuation of the Company's common shares and equity awards for accounting purposes.

The aggregate intrinsic value of stock options exercised during the year ended December 31, 2021 was \$39.4 million.

Activity and Valuation

On February 17, 2021, the Company granted a total of 568,120 incentive stock options to certain directors and non-employees. These options have an exercise price of between \$0.22 per share and \$0.65 per share, vested immediately upon grant, and expire between February 17, 2026 and February 26, 2026.

On February 26, 2021, the Company granted a total of 46,777 incentive stock options to a consultant. These options have an exercise price of \$0.22 per share, vested immediately upon grant, and expire on February 26, 2026.

On March 4, 2021, the Company granted 5,758,306 incentive stock options to certain employees, directors and consultants under the Company's STIP, as well as 9,783,922 incentive stock options to the same individuals under its LTIP.

The stock options granted under the STIP expire on June 1, 2028 or earlier, have exercise prices ranging between \$0.65 per share and \$8.64 per share, and have vesting periods with a maximum of three years.

The fair value of the options granted under the Company's STIP was estimated on the date of grant using the Black-Scholes option pricing model, with the following weighted average assumptions:

	2021
Expected share price volatility	89.4 %
Expected life of options	3.7 years
Risk-free interest rate	0.5 %
Expected dividend yield	0.0 %
Estimated per share fair value of the Company's common shares	\$ 6.05

The stock options granted under the LTIP have an exercise price of \$0.65 per share and expire on June 1, 2028. The LTIP awards vest as follows:

- (1) Tranche 1 - 25% when the Company's market capitalization equals \$3 billion;
- (2) Tranche 2 - 35% when the Company's market capitalization equals \$6 billion;
- (3) Tranche 3 - 20% upon the date that the ISA grants an exploitation contract to the Company; and
- (4) Tranche 4 - 20% upon the commencement of the first commercial production following the grant of the exploitation contract.

Tranche 1 and Tranche 2 vest based on the Company's market capitalization of \$3 billion and \$6 billion, respectively. Accordingly, these options are determined to be market-based awards for which the Company has calculated fair value and derived a service period through which to expense the related fair value. The options included in Tranche 1 and Tranche 2 had a grant date fair value of \$5.59 per share and \$5.42 per share and derived service periods of 0.33 years and 1.41 years, respectively. The Company will expense these awards ratably over the remaining service period.

Tranche 3 and Tranche 4 of the LTIP stock options vest based on the date the ISA grants an exploitation contract and the commencement of commercial production. These options are determined to be performance-based awards. The Company will recognize compensation costs for the performance-based awards if and when the Company concludes that it is probable that the performance conditions will be achieved. As at December 31, 2021, no compensation expense related to the performance based awards was recorded as the awarding of an ISA contract is outside the control of the Company. The Company will reassess the probability of the vesting of the performance-based awards at each reporting period and adjust the compensation cost when determined to be probable.

The fair value of awards granted under the LTIP was estimated on the date of grant using the following weighted average assumptions:

	Tranche 1 and Tranche 2¹	Tranche 3²	Tranche 4²
Expected stock price volatility	91.0 %	91.2 %	91.2 %
Expected life of options (years)	7.3 years	5.2 years	5.4 years
Risk-free interest rate	1.3 %	0.8 %	0.9 %
Expected dividend yield	0.0 %	0.0 %	0.0 %
Estimated per share fair value of the Company's common shares	\$ 6.05	\$ 6.05	\$ 6.05

1. The fair value of the market-based awards granted under the LTIP was estimated on the date of grant using a Monte-Carlo model to simulate a distribution of future share prices.
2. The fair value of the performance-based awards granted under the LTIP was estimated on the date of grant using the Black-Scholes option pricing model.

Changes in these assumptions could have a material impact on the Company's loss and comprehensive loss.

In September 2021, the Board of Directors approved amendments for certain stock option grants to extend their term beyond the retirement provisions in the Plan, resulting in an expense of \$3.9 million.

During the year ended December 31, 2021, the Company recognized \$59.3 million of share-based compensation expense for stock options in the statement of loss and comprehensive loss (2020: \$4.1 million).

Share-based compensation expense for stock options totaling \$32.7 million related to general and administration matters were charged to the statement of loss and comprehensive loss for the year ended December 31, 2021 (2020: \$3.3 million). The Company recorded a total of \$26.6 million of share-based compensation expense for stock options related to exploration and evaluation activities for the year ended December 31, 2021 (2020: \$0.8 million).

Restricted Share Units

The Company may, from time to time, grant RSUs to directors, officers, employees, and consultants of the Company and its subsidiaries under the Plan, whether to the STIP, the LTIP or otherwise. During the year ended December 31, 2021, the Company granted 3,556,224 RSUs vesting in thirds on each anniversary of the grant date, 398,438 RSUs vesting in fourths on each anniversary of the grant date and 173,216 RSUs vesting immediately on grant date. On each vesting date, RSU holders are entitled to receive common shares equivalent to the number of RSUs held provided the holder is providing service to the Company on such vesting date. A total of \$1.0 million was charged to the statement of loss and comprehensive loss as share-based compensation expense for the year ended December 31, 2021, of which \$0.4 million was recorded in exploration and evaluation expenses and \$0.6 million was recorded in general and administrative expenses. As at December 31, 2021, total unrecognized share-based compensation expense for RSUs was \$12.3 million.

A summary of the RSU activity is presented in the table below:

	Number of RSUs Outstanding	Weighted average grant- date fair value per RSU
Outstanding – December 31, 2020	—	\$ —
Granted	4,127,878	3.29
Forfeited	(8,032)	12.45
Exercised	(173,216)	2.30
Outstanding – December 31, 2021	3,946,630	\$ 3.31

The grant date fair value of RSUs is equivalent to the closing share price of the Company’s common shares on the date of grant. As at December 31, 2021, there were no RSUs vested and exercisable.

17. Loss per Share

Basic loss per share is computed by dividing the loss by the weighted-average number of common shares of the Company outstanding during the period. Diluted loss per share is computed by giving effect to all common share equivalents of the Company, including outstanding stock options, RSUs, warrants, Special Shares and options to purchase Special Shares, to the extent these are dilutive. Basic and diluted loss per share was the same for each period presented as the inclusion of all common share equivalents would have been anti-dilutive.

Anti-dilutive equivalent common shares were as follows:

	For the year ended December 31, 2021	For the year ended December 31, 2020
Outstanding options to purchase common shares	25,287,670	15,549,977
Outstanding RSUs	3,946,630	—
Outstanding warrants	36,078,620	—
Outstanding Special Shares and options to purchase Special Shares	136,239,964	—
Total anti-dilutive common equivalent shares	201,552,884	15,549,977

18. Related Party Transactions

The Company’s subsidiary, DGE, is engaged in a consulting agreement with SSCS Pte. Ltd. (“SSCS”) to manage offshore engineering studies. A director of DGE is employed through SSCS. Consulting services during the year ended December 31, 2021 totaled \$275 thousand (2020: \$275 thousand), and are disclosed as external consulting and exploration labor within exploration and evaluation expenses (Note 11). As at December 31, 2021, the amount payable to SSCS was \$23 thousand (2020: \$23 thousand).

The Company’s Chief Ocean Scientist provides consulting services to the Company through Ocean Renaissance LLC (“Ocean Renaissance”) where he is a principal. Consulting services during the year ended December 31, 2021 amounted to \$375 thousand (2020: \$367 thousand), and are disclosed as exploration labor within exploration and evaluation expenses (Note 11). As at December 31, 2021, the amount payable to Ocean Renaissance was \$nil (2020 - \$nil).

19. Commitments and Contingent Liabilities

NORI Exploration Contract

As part of the NORI Exploration Contract with the ISA (Note 11), NORI submitted a periodic review report to the ISA in 2021, covering the 2017-2021 period. NORI had committed to spend \$5 million over the five-year period from 2017 to 2021, which it has exceeded. The periodic review report included a summary of work completed over the 5-year period and a program of activities and estimated budget for the next five-year period. The report is being reviewed by the ISA.

Marawa Exploration Contract

As part of DGE's Marawa Option Agreement and Services Agreement with Marawa with respect to the Marawa Area (Note 11), Marawa committed to spend a defined amount of funds on exploration activities on an annual basis. The commitment for fiscal 2021 and 2020 was Australian dollar \$2 million and Australian dollar \$1 million, respectively. The spending commitment for both years has been exceeded. The commitment for fiscal 2022, 2023 and 2024 is Australian dollar \$1 million, Australian dollar \$3 million and Australian dollar \$2 million, respectively. Such commitment is negotiated with the ISA as part of the five-year plans submissions and is subject to regular periodic reviews.

TOML Exploration Contract

As part of the TOML Exploration Contract, TOML submitted a periodic review report to the ISA in 2021, covering the 2017-2021 period. The periodic review report included a summary of work completed over the five-year period and a program of activities and estimated budget for the next five-year period. TOML had committed to spend \$30.0 million over the five-year period from 2017 to 2021. Such commitment has flexibility where the amount can be reduced by the ISA and such reduction would be dependent upon various factors including the success of the exploration programs and the availability of funding.

For the 2021 year, the Company has spent approximately \$8.1 million in connection with the TOML Exploration Contract, bringing the five-year total spend to approximately \$13.3 million, from 2017 to 2021.

Discussions with the ISA are underway to review the progress achieved to date and agree on program activities for the next 5-years.

Offtake Agreements

On May 25, 2012, the Company's wholly-owned subsidiary, DGE, and Glencore International AG ("Glencore") entered into a copper offtake agreement and a nickel offtake agreement. DGE has agreed to deliver to Glencore 50% of the annual quantity of copper and nickel produced at a DGE-owned processing facility from nodules derived from the NORI Area at London Metal Exchange referenced market pricing with allowances for product quality and delivery location. Both the copper and nickel offtake agreements are for the life of the Company's rights to the NORI Area. Either party may terminate the agreement upon a material breach or insolvency of the other party. Glencore may also terminate the agreement by giving twelve months' notice.

Sponsorship Agreements

On July 5, 2017, Nauru, the Nauru Seabed Minerals Authority and NORI entered into a sponsorship agreement formalizing certain obligations of the parties in relation to NORI's exploration and potential exploitation of the NORI Area. Upon reaching the minimum recovery level within the exploitation contract area, NORI will pay Nauru a seabed mineral recovery payment based on the polymetallic nodules recovered from the exploitation contract area. In addition, NORI will pay an administration fee each year to Nauru for such administration and sponsorship, which is subject to review and increase in the event NORI is granted an ISA exploitation contract.

On March 8, 2008, Tonga and TOML entered into a sponsorship agreement formalizing certain obligations of the parties in relation to TOML's exploration and potential exploitation of the TOML Area ("TOML Sponsorship Agreement"). Upon reaching the minimum recovery level within the exploitation contract area, TOML has agreed to pay Tonga a seabed mineral recovery payment based on the polymetallic nodules recovered from the exploitation contract area. In addition, TOML has agreed to pay reasonable direct costs incurred by Tonga to administer the obligations of Tonga to the ISA. On September 23, 2021, the Company and Tonga updated the TOML Sponsorship Agreement harmonizing the terms of its engagement with TOML with those held by NORI with Nauru.

Contingent Liability

On October 28, 2021, a shareholder filed a putative class action against the Company and certain executives in federal district court for the Eastern District of New York, styled *Caper v. TMC The Metals Company Inc. F/K/A Sustainable Opportunities Acquisition Corp., Gerard Barron and Scott Leonard*. The complaint alleges that all defendants violated Section 10(b) of the Securities Exchange Act of 1934, as amended (the "Exchange Act"), and Rule 10b-5 promulgated thereunder, and Messrs. Barron and Leonard violated Section 20(a) of the Exchange Act, by making false and/or misleading statements and/or failing to disclose information about the Company's operations and prospects during the period from March 4, 2021 and October 5, 2021. On November 15, 2021, a second complaint containing substantially the same allegations was filed, captioned *Tran v. TMC the Metals Company, Inc.* These cases have been consolidated. On March 6, 2022, a lead plaintiff was selected. The Company denies any allegations of wrongdoing and the Company has filed a motion to dismiss and intends to defend against this lawsuit. There is no assurance, however, that the Company or the other defendants will be successful in their defense of this lawsuit or that insurance will be available or adequate to fund any settlement or judgment or the litigation costs of this action. If the motion to dismiss is unsuccessful, there is a possibility that the Company may incur a loss in this matter. Such losses or range of possible losses either cannot be reliably estimated. A resolution of this lawsuit adverse to the Company or the other defendants, however, could have a material effect on the Company's financial position and results of operations in the period in which the lawsuit is resolved.

20. Supplemental Cash Flow Information

	For the year ended December 31, 2021	For the year ended December 31, 2020
Non-Cash Investing and Financing Activities		
Common shares issued to settle previous services (Note 11)	\$ 13,103	\$ 6,410
Common shares issued for TOML Acquisition (Note 7)	\$ —	\$ 28,000
Additional contribution from Allseas (Note 11)	\$ —	\$ 8,333
Conversion of debentures (Note 13)	\$ 27,003	\$ —
Financing stock options issued (Note 16)	\$ —	\$ 397

21. Segmented Information

The Company's business consists of only one operating segment, namely exploration of seafloor polymetallic nodules, which includes the development of a metallurgical process to treat such seafloor polymetallic nodules. Details on the geographical basis of the Company's long-lived assets based on where each legal entity is domiciled are as follows:

Equipment	December 31, 2021	December 31, 2020
Nauru	\$ 1,246	\$ 1,292
Singapore	158	—
Tonga	10	15
North America	2	3
Total	\$ 1,416	\$ 1,310

22. Income Taxes

Reconciliation of Effective Tax Rate

The Company is subject to Canadian federal and provincial tax for the estimated assessable profit for the years ended December 31, 2020 and 2021 at a rate of 27%. The Company had no assessable profit in Canada for all periods disclosed.

The income tax expense at statutory rates for the Company can be reconciled to the reported loss for the years 2021 and 2020 per the statement of loss and comprehensive loss as follows:

	For the year ended December 31, 2021	For the year ended December 31, 2020
Net loss for the year	\$ (141,299)	\$ (56,631)
Canadian Federal and Provincial income tax rates	27.00 %	27.00 %
Income tax recovery based on the above rates	\$ (38,151)	\$ (15,290)
Permanent differences	8,597	981
Effect of differences in future and foreign tax rates	22,721	11,152
Foreign exchange and other	1	(142)
Expiry of losses as a result of the Business Combination (Note 6)	9,181	—
Valuation allowance changes affecting the provision of income taxes	(2,349)	3,299
Total income taxes	\$ —	\$ —

The Company currently has no uncertain tax positions and is therefore not reflecting any adjustments.

Components of the Company's deferred income tax assets/(liabilities) are as follows:

	<u>December 31, 2021</u>	<u>December 31, 2020</u>
Deferred Tax Assets		
Non-capital losses	\$ 7,409	\$ 10,925
Capital losses and other	—	70
Equipment	90	5
Share issuance costs	10	75
Total deferred income tax assets	\$ 7,509	\$ 11,075
Valuation allowance	(7,509)	(11,075)
Deferred tax asset recognized	<u>\$ —</u>	<u>\$ —</u>
Deferred Tax Liability		
Difference between the book value and the tax basis of the TOML exploration contract (Note 7)	\$ (10,675)	\$ (10,675)
Deferred tax liability recognized	<u>\$ (10,675)</u>	<u>\$ (10,675)</u>

Deductible temporary differences, unused tax losses and unused tax credits are as follows:

	<u>December 31, 2021</u>	<u>December 31, 2020</u>	<u>Expiry Date Range</u>
Non-capital losses	\$ 33,645	\$ 45,313	See below
Capital losses	\$ —	\$ 520	Not applicable
Equipment	\$ 333	\$ 19	Not applicable
Share issuance costs	\$ 37	\$ 276	Not applicable

As at December 31, 2021, the Company had non-capital loss carry-forwards of \$34 million that may be used to offset future taxable income. Non-capital losses incurred in Canada prior to closing of the Business Combination (Note 6) have been restricted upon the acquisition of control event and may no longer be available to offset future taxable income.

These losses, if not utilized, will expire as follows:

	<u>Canada</u>	<u>United States</u>	<u>Singapore</u>	<u>Tonga</u>
2035	\$ —	\$ 2	\$ —	\$ —
2041	2,675	—	—	—
No expiry	—	—	13,230	17,738
Loss carry-forwards	<u>\$ 2,675</u>	<u>\$ 2</u>	<u>\$ 13,230</u>	<u>\$ 17,738</u>

As at December 31, 2020, the non-capital loss carry-forwards of \$45 million pertained to the following:

	<u>Canada</u>	<u>United States</u>	<u>Singapore</u>	<u>Tonga</u>
Loss carry-forwards	\$ 20,704	\$ 3	\$ 10,214	\$ 14,392

The Company files income tax returns in Canada, the United States, Singapore and Tonga, and is subject to examination in these jurisdictions for all years since the Company's inception in 2011. As at December 31, 2021, all tax years are subject to examination by the tax authorities and no tax authority audits are currently underway. Fiscal years outside the normal statute of limitation remain open to audit by tax authorities due to tax attributes generated in those early years which have been carried forward and may be audited in subsequent years when utilized. The timing of the resolution, settlement and closure of any income tax audits is highly uncertain, and the Company is unable to estimate the full range of possible adjustments to the balance of gross unrecognized tax benefits. It is possible that the balance of gross unrecognized tax benefits could significantly change in the next twelve months. As at December 31, 2021, the 2021 tax year filings for the Company and its subsidiaries (where applicable) remain unfiled and have not been assessed by the relative tax authorities.

23. Subsequent Event

On March 16, 2022, the Company's subsidiary NORI and Allseas entered into a non-binding term sheet which contemplates an upgrade of the PMTS into a commercial nodule collection system and commercial operation of this system in NORI Area D. The terms are subject to negotiation between NORI and Allseas and if successful, may result in amendments to the existing Strategic Alliance Agreement (Note 11).

PROSPECTUS

, 2022

You should rely only on the information contained or incorporated by reference in this prospectus. We have not authorized anyone to provide you with different information. You should not assume that the information contained or incorporated by reference in this prospectus is accurate as of any date other than the date of this prospectus. We are not making an offer of these securities in any state where the offer is not permitted.

PART II
INFORMATION NOT REQUIRED IN PROSPECTUS

Item 13. Other Expenses of Issuance and Distribution.

The following table sets forth the estimated expenses to be borne by the registrant in connection with the issuance and distribution of the securities being registered hereby.

<u>Expense</u>	<u>Estimated Amount</u>
Securities and Exchange Commission registration fee	\$ 101,486
Accounting fees and expenses	*
Legal fees and expenses	*
Financial printing and miscellaneous expenses	*
Total	\$ *

* These fees estimated cannot be defined at this time.

Item 14. Indemnification of Directors and Officers.

Under the BCBCA, a company may indemnify a director or officer, a former director or officer, or a person who acts or acted at the company's request as a director or officer, or an individual acting in a similar capacity, of another entity, which we refer to as an eligible party, against all costs, charges and expenses, including an amount paid to settle an action or satisfy a judgment, reasonably incurred by him or her in respect of any civil, criminal, administrative, investigative or other proceeding in which he or she is involved because of that association with the company or other entity, if: (1) the individual acted honestly and in good faith with a view to the best interests of such company or the other entity, as the case may be; and (2) in the case of a proceeding other than a civil proceeding, the individual had reasonable grounds for believing that the individual's conduct was lawful. A company cannot indemnify an eligible party if it is prohibited from doing so under its articles, even if it had agreed to do so by an indemnification agreement (provided that the articles prohibited indemnification when the indemnification agreement was made). A company may advance the expenses of an eligible party as they are incurred in an eligible proceeding only if the eligible party has provided an undertaking that, if it is ultimately determined that the payment of expenses was prohibited, the eligible party will repay any amounts advanced. On application from an eligible party, a court may make any order the court considers appropriate in respect of an eligible proceeding, including the indemnification of penalties imposed or expenses incurred in any such proceedings and the enforcement of an indemnification agreement.

Subject to the BCBCA, our Articles require us to indemnify an eligible party and his or her heirs and legal personal representatives against all eligible penalties to which such person is or may be liable, and we must after final disposition of an eligible proceeding, pay the expenses actually and reasonably incurred by such person in respect of that proceeding. Each eligible party is deemed to have contracted with us on the terms of the indemnity contained in our Articles. In addition, our Articles specify that failure of an eligible party to comply with the provisions of the BCBCA or our Articles will not invalidate any indemnity to which he or she is entitled. Our Articles also allow for us to purchase and maintain insurance for the benefit of specified eligible parties.

We entered into indemnity agreements with our directors and certain officers. Each indemnity agreement provides for indemnification and advancements by us of certain expenses and costs relating to claims, suits or proceedings arising from his or her service to us, or, at our request, service to other entities, as officers or directors to the maximum extent permitted by applicable law and subject to the terms and conditions of such indemnity agreement.

We have also purchased insurance policies relating to certain liabilities that our directors and officers may incur in such capacity.

Item 15. Recent Sales of Unregistered Securities.

Founder Shares

On December 31, 2019, the Sponsor purchased 8,625,000 shares (the “Founder Shares”) of SOAC’s Class B ordinary shares, par value \$0.0001, for an aggregate price of \$25,000. In March 2020, the Sponsor transferred 30,000 Founder Shares to each of SOAC’s independent directors. Upon the Continuance, the Founder Shares became Common Shares. The Sponsor had agreed to forfeit up to 1,125,000 Founder Shares to the extent that the over-allotment option was not exercised in full by the underwriter so that the Founder Shares will represent 20% of SOAC’s issued and outstanding shares after the initial public offering. The over-allotment option expired in June 2020; thus, these Founder Shares were forfeited accordingly.

Such securities were issued in connection with SOAC’s organization pursuant to the exemption from registration contained in Section 4(a)(2) of the Securities Act. The Sponsor is an accredited investor for purposes of Rule 501 of Regulation D.

Private Placement Warrants

Simultaneously with the closing of the initial public offering, SOAC consummated the private placement of 9,500,000 Private Placement Warrants at a price of \$1.00 per Private Placement Warrant to the Sponsor, generating gross proceeds of \$9.5 million. Each Private Placement Warrant is exercisable for one Common Share at a price of \$11.50 per share, subject to adjustment. Such securities were issued pursuant to the exemption from registration contained in Section 4(a)(2) of the Securities Act. The Sponsor is an accredited investor for purposes of Rule 501 of Regulation D.

Business Combination Consideration

In accordance with the terms and subject to the conditions of the Business Combination Agreement, pursuant to the Plan of Arrangement, the shareholders and the optionholders of DeepGreen received on the Closing Date in exchange for their DeepGreen Common Shares or options, as applicable, an aggregate of 203,874,981 Common Shares in exchange for DeepGreen Common Shares and rollover options to purchase an aggregate of 25,287,670 Common Shares with respect to DeepGreen Options assumed by the Company, and (ii) the DeepGreen Earnout Shares (which includes DeepGreen Earnout Shares underlying the rollover options assumed by the Company). The Common Shares, DeepGreen Earnout Shares and rollover options to purchase Common Shares and DeepGreen Earnout Shares issued to shareholders and optionholders of DeepGreen pursuant to the Plan of Arrangement were not registered under the Securities Act, and were issued pursuant to the exemption provided by Section 3(a)(10) under the Securities Act.

Sponsor Earnout Shares

Immediately following the Continuance and prior to the Effective Time, the Sponsor exchanged 741,000 SOAC Common Shares (which consisted of the SOAC Class B ordinary shares prior to the Continuance) for the Sponsor Earnout Shares, each of which is automatically convertible into Common Shares on a one-for-one basis (subject to adjustment), if certain Common Share price thresholds are met as described herein. The Sponsor Earnout Shares issued to the Sponsor were issued pursuant to and in accordance with the exemption from registration under the Securities Act, under Section 3(a)(9) as involving an exchange by the Company exclusively with its security holders.

PIPE Financing

On the Closing Date, the Company offered and sold to the PIPE Investors, pursuant to the Subscription Agreements, an aggregate of 11,030,000 Common Shares at a price of \$10.00 per share for aggregate gross proceeds to the Company of \$110,300,000 in the PIPE Financing. The PIPE Financing closed concurrently with the Business Combination. The shares issued to the PIPE Investors in the PIPE Financing on the Closing Date were issued pursuant to and in accordance with the exemption from registration under the Securities Act, under Section 4(a)(2) and/or Regulation D promulgated under the Securities Act, or a prospectus exemption under applicable Canadian securities law, as applicable.

Issuances of Common Shares to Service Providers

On October 7, 2021, in lieu of cash fees for services rendered to DeepGreen in connection with the Business Combination, the Company issued an aggregate of 873,953 Common Shares to five service providers. The shares issued to such service providers were issued pursuant to and in accordance with the exemption from registration under the Securities Act under Section 4(a)(2) and/or Regulation D promulgated under the Securities Act, or a prospectus exemption under applicable Canadian securities law, as applicable.

- †† Certain of the exhibits and schedules to this Exhibit have been omitted in accordance with Regulation S-K Item 601(a)(5). The Registrant agrees to furnish a copy of all omitted exhibits and schedules to the SEC upon its request.
- + Management contract or compensatory plan or arrangement.

Item 17. Undertakings.

The undersigned registrant hereby undertakes:

- (1) To file, during any period in which offers or sales are being made, a post-effective amendment to this registration statement:
 - (i) To include any prospectus required by Section 10(a)(3) of the Securities Act;
 - (ii) To reflect in the prospectus any facts or events arising after the effective date of the registration statement (or the most recent post-effective amendment thereof) which, individually or in the aggregate, represent a fundamental change in the information set forth in the registration statement. Notwithstanding the foregoing, any increase or decrease in volume of securities offered (if the total dollar value of securities offered would not exceed that which was registered) and any deviation from the low or high end of the estimated maximum offering range may be reflected in the form of prospectus filed with the Securities and Exchange Commission (the "Commission") pursuant to Rule 424(b) if, in the aggregate, the changes in volume and price represent no more than a 20% change in the maximum aggregate offering price set forth in the "Calculation of Registration Fee" table in the effective registration statement; and
 - (iii) To include any material information with respect to the plan of distribution not previously disclosed in the registration statement or any material change to such information in the registration statement;

provided, however, that: Paragraphs (a)(1)(i), (a)(1)(ii) and (a)(1)(iii) of this section do not apply if the information required to be included in a post-effective amendment by those paragraphs is contained in reports filed with or furnished to the Commission by the registrant pursuant to Section 13 or Section 15(d) of the Securities and Exchange Act of 1934, as amended (the "Exchange Act"), that are incorporated by reference in the registration statement, or is contained in a form of prospectus filed pursuant to Rule 424(b) that is part of the registration statement.

- (2) That, for the purpose of determining any liability under the Securities Act, each such post-effective amendment shall be deemed to be a new registration statement relating to the securities offered therein, and the offering of such securities at that time shall be deemed to be the initial bona fide offering thereof.
- (3) To remove from registration by means of a post-effective amendment any of the securities being registered which remain unsold at the termination of the offering.
- (4) That, for the purpose of determining liability under the Securities Act to any purchaser:
 - (i) Each prospectus filed by the registrant pursuant to Rule 424(b)(3) shall be deemed to be part of the registration statement as of the date the filed prospectus was deemed part of and included in the registration statement; and

- (ii) Each prospectus required to be filed pursuant to Rule 424(b)(2), (b)(5) or (b)(7) as part of a registration statement in reliance on Rule 430B relating to an offering made pursuant to Rule 415(a)(1)(i), (vii) or (x) for the purpose of providing the information required by Section 10(a) of the Securities Act shall be deemed to be part of and included in the registration statement as of the earlier of the date such form of prospectus is first used after effectiveness or the date of the first contract of sale of securities in the offering described in the prospectus. As provided in Rule 430B, for liability purposes of the issuer and any person that is at that date an underwriter, such date shall be deemed to be a new effective date of the registration statement relating to the securities in the registration statement to which that prospectus relates, and the offering of such securities at that time shall be deemed to be the initial bona fide offering thereof. *Provided, however,* that no statement made in a registration statement or prospectus that is part of the registration statement or made in a document incorporated or deemed incorporated by reference into the registration statement or prospectus that is part of the registration statement will, as to a purchaser with a time of contract of sale prior to such effective date, supersede or modify any statement that was made in the registration statement or prospectus that was part of the registration statement or made in any such document immediately prior to such effective date.
- (5) That, for the purpose of determining liability of the registrant under the Securities Act to any purchaser in the initial distribution of the securities, the undersigned registrant undertakes that in a primary offering of securities of the undersigned registrant pursuant to this registration statement, regardless of the underwriting method used to sell the securities to the purchaser, if the securities are offered or sold to such purchaser by means of any of the following communications, the undersigned registrant will be a seller to the purchaser and will be considered to offer or sell such securities to such purchaser:
 - (i) Any preliminary prospectus or prospectus of the undersigned registrant relating to the offering required to be filed pursuant to Rule 424;
 - (ii) Any free writing prospectus relating to the offering prepared by or on behalf of the undersigned registrant or used or referred to by the undersigned registrant;
 - (iii) The portion of any other free writing prospectus relating to the offering containing material information about the undersigned registrant or its securities provided by or on behalf of the undersigned registrant; and
 - (iv) Any other communication that is an offer in the offering made by the undersigned registrant to the purchaser.

Insofar as indemnification for liabilities arising under the Securities Act may be permitted to directors, officers and controlling persons of the registrant pursuant to the foregoing provisions, or otherwise, the registrant has been advised that in the opinion of the SEC such indemnification is against public policy as expressed in the Securities Act and is, therefore, unenforceable. In the event that a claim for indemnification against such liabilities (other than the payment by the registrant of expenses incurred or paid by a director, officer or controlling person of the registrant in the successful defense of any action, suit or proceeding) is asserted by such director, officer or controlling person in connection with the securities being registered, the registrant will, unless in the opinion of its counsel the matter has been settled by controlling precedent, submit to a court of appropriate jurisdiction the question whether such indemnification by it is against public policy as expressed in the Securities Act and will be governed by the final adjudication of such issue.

SIGNATURES

Pursuant to the requirements of the Securities Act of 1933, as amended, the registrant has duly caused this registration statement to be signed on its behalf by the undersigned, thereunto duly authorized in the City of New York, State of New York on April 13, 2022.

- (1) Pursuant to Rule 416 under the Securities Act of 1933, as amended (the “Securities Act”), the registrant is also registering an indeterminate number of additional Common Shares that may become issuable as a result of any stock dividend, stock split, recapitalization or other similar transaction.
- (2) Consists of (i) 239,938,297 Common Shares, without par value, of the Registrant (the “Common Shares”) registered for sale by the selling securityholders named in this registration statement (the “Selling Securityholders”) (including 78,518,244 Common Shares issuable upon conversion of issued and outstanding Special Shares (as defined in this Registration Statement) and up to 11,578,620 shares issuable upon the exercise of the Allseas Warrant (as defined in this Registration Statement) and the Common Shares referred to in the following clause (ii)), (ii) 9,500,000 Common Shares issuable upon the exercise of 9,500,000 Private Placement Warrants (as defined herein), and (iii) 15,000,000 Common Shares issuable upon the exercise of 15,000,000 Public Warrants (as defined herein).

- (3) Pursuant to Rule 457(c) under the Securities Act, and solely for the purpose of calculating the registration fee, the proposed maximum offering price per share is \$4.14, which is the average of the high and low prices of the Common Shares on October 6, 2021 on The Nasdaq Stock Market (the "Nasdaq").
 - (4) Represents the potential resale of 9,500,000 Private Placement Warrants held by the Selling Securityholders, which represent warrants to acquire 9,500,000 Common Shares.
 - (5) In accordance with Rule 457(i), the entire registration fee for the Private Placement Warrants is allocated to the Common Shares underlying such warrants, and no separate fee is payable for the Private Placement Warrants.
 - (6) A registration fee of \$101,485.61 has previously been paid in connection with the initial filing of the Registration Statement, filed with the Securities and Exchange Commission on October 7, 2021. Accordingly, no registration fee is being paid with this Post-Effective Amendment No. 1 to the Registration Statement.
-
